

HOW TO MAKE YOUR WATER SAFE

FOR:

DRINKING

FOOD PREPARATION

MAKING INFANT FORMULA

CLEANING TEETH

WASHING HANDS

WASHING DISHES

HOW TO BOIL WATER

If using an electric kettle or jug, boil the water until the kettle or jug turns off automatically.

If you are using a pot on a gas stove, BBQ, or portable cooker, bring the water to a rolling boil for one minute.

HOW TO DISINFECT WATER

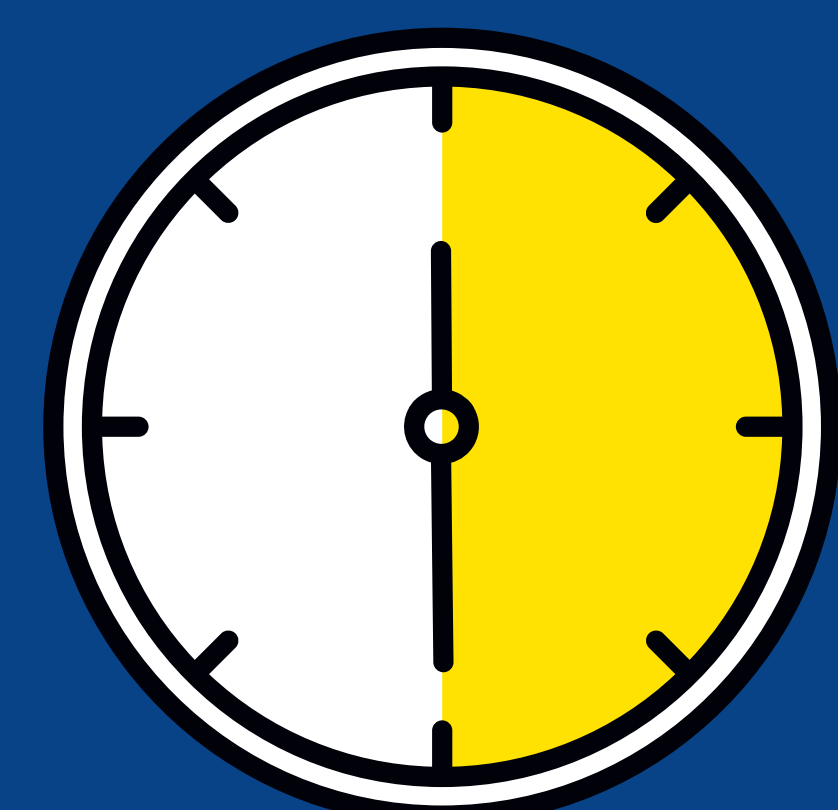

If you're unable to boil water, you can disinfect water with bleach.

Bleach should be unscented **AND** free of colour and detergents - the label should be checked thoroughly. If there is no information, do not use the product.

Add 5 drops of plain household bleach per litre of water. Or half a teaspoon for 10 L and store.

Don't drink the water for at least 30 minutes after disinfecting.

IF UNCERTAIN ABOUT THE QUALITY OF WATER, DO NOT DRINK.
