14.6

Rules - Non-Notification of Applications

14.6.1 Applications for Controlled activities shall not require the written approval of other persons and shall not be notified or limited-notified.

14.6.2 The following Restricted Discretionary activities shall not require the written approval of other persons and shall not be notified or limited-notified:

14.6.2.1 Buildings (Rule 14.4.4).

14.6.3 The following Restricted Discretionary activities will not be publicly notified but notice will be served on those persons considered to be adversely affected if those persons have not given their written approval:

14.6.3.1 Sunlight access – sites adjoining the Arrowtown Residential Historic Management Zone.

14.6.3.2 Setbacks from internal boundaries.

Appendix 4: Chapter 15 - Local Shopping Centre Zone as Recommended

15 LOCAL SHOPPING CENTRE ZONE

Local Shopping Centres: Albert Town, Arrowtown, Cardrona Valley Road, Fernhill, Frankton, Hawea, Kelvin Heights and Sunshine Bay

15.1 Zone Purpose

The Local Shopping Centre Zone enables small scale commercial and business activities in discrete pockets of land that are accessible to residential areas and people in transit.

The Zone seeks to reduce the necessity for people to travel longer distances to town centres to purchase convenience goods and access services. Due to the nature of the Zone's locations in predominantly residential environments, standards limit the potential adverse effects on residential amenity and discourage the establishment of inappropriate activities. Visitor accommodation and residential activities are provided for in the Zone, adding to the vibrancy and viability of the Zone, whilst contributing to the diversity of housing options enabled by the District Plan.

15.2 Objectives and Policies

15.2.1 Objective – Local Shopping Centres provide a focal point for a range of activities that meet the day to day needs of the community at a limited scale that supplements the function of town centres.

Policies

- 15.2.1.1** Provide for a diverse range of activities that meet the needs of the local community, enable local employment opportunities and assist with enabling the economic viability of local shopping centres.
- 15.2.1.2** Ensure that local shopping centres remain at a small scale that does not undermine the role and function of town centres.
- 15.2.1.3** Enable residential and visitor accommodation activities, but limit their establishment to above ground floor level to ensure that the integrity of activities occurring at street level is maintained, and that the core commercial function of the local shopping centres is not eroded.
- 15.2.1.4** Avoid individual retail activities exceeding 300m² gross floor area and individual office activities exceeding 200m² gross floor area that would adversely affect the:
 - a. retention and establishment of a mix of activities within the local shopping centre;
 - b. role and function of town centres and commercial zones that provide for large scale retailing; and
 - c. safe and efficient operation of the transport network.
- 15.2.1.5** Restrict identified retail activities to ensure that the role and function of town centres as the District's principal centres of retailing activity is not threatened.
- 15.2.1.6** Limit the total gross floor area of retail and office activities within the Local Shopping Centre Zone located on Cardrona Valley Road to ensure that the commercial function of Wanaka Town Centre and Three Parks is not adversely affected.

15.2.2 Objective – Buildings respond to the existing character, quality and amenity values of their neighbourhood setting.

Policies

- 15.2.2.1** Control the height, scale, appearance and location of buildings in order to achieve a built form that complements the existing patterns of development and is consistent with established amenity values.
- 15.2.2.2** Ensure that development generally comprises a scale that is commensurate with the receiving built environment.
- 15.2.2.3** Provide for consideration of minor height infringements where they help achieve higher quality design outcomes and do not significantly adversely affect amenity values.
- 15.2.2.4** Place specific controls on the bulk and location of buildings on sites adjoining Residential-zoned properties to ensure that an appropriate standard of residential amenity is maintained.
- 15.2.2.5** Control the design and appearance of verandas so they integrate well with the buildings they are attached to complement the overall streetscape and do not interfere with kerbside movements of high-sided vehicles, while providing appropriate cover for pedestrians.
- 15.2.2.6** Ensure that outdoor storage areas are appropriately located and screened to limit any adverse visual effects and to be consistent with established amenity values.

15.2.3 Objective – Adverse environmental effects received both within and beyond the zone are minimised.

Policies

- 15.2.3.1** Provide appropriate noise limits to control adverse noise effects generated by activities occurring within the Local Shopping Centre Zone and received by nearby properties.
- 15.2.3.2** Require acoustic insulation for critical listening environments (including residential activities and visitor accommodation) to:
 - a. limit the impact of noise generated within the Zone on occupants; and,
 - b. where relevant, limit the potential for reverse sensitivity effects on Queenstown Airport of buildings within the Queenstown Airport Outer Control Boundary.
- 15.2.3.3** Ensure that the location and direction of lights does not cause significant glare to other properties, roads and public places, and promote lighting design that mitigates adverse effects on views of the night sky.
- 15.2.3.4** Avoid the establishment of activities that are not consistent with established amenity values, cause inappropriate environmental effects, or are more appropriately located in other zones.

15.2.3.5 For development of the site(s) at 1 Hansen Road, between Hansen Road and the Frankton Cemetery (as shown on Planning Maps 31, 31a and 33), in addition to other Zone-wide requirements:

- a. ensure that development is undertaken in an integrated manner, having particular regard to ensuring the safe and efficient operation of the transport network;
- b. implement specific controls to limit effects on the historic values of the neighbouring cemetery.

15.3 Other Provisions and Rules

15.3.1 District Wide

Attention is drawn to the following District Wide chapters.

1	Introduction	2	Definitions	3	Strategic Direction
4	Urban Development	5	Tangata Whenua	6	Landscapes and Rural Character

37	Designations		Planning Maps		

15.3.2 Interpreting and Applying the Rules

- 15.3.2.1** A permitted activity must comply with all the rules listed in the Activity and Standards tables.
- 15.3.2.2** Where an activity does not comply with a Standard listed in the Standards table, the activity status identified by the 'Non-Compliance Status' column shall apply.
- 15.3.2.3** Where an activity breaches more than one Standard, the most restrictive status shall apply to the Activity.
- 15.3.2.4** The following abbreviations are used within this Chapter.

P	Permitted	C	Controlled	RD	Restricted Discretionary
D	Discretionary	NC	Non-Complying	PR	Prohibited

15.4

Rules - Activities

Activities located in the Local Shopping Centre Zone		Activity Status
15.4.1	Activities which are not listed in this table and comply with all standards	P
15.4.2	Verandas Control is reserved to: a. design; b. materials; c. external appearance; d. the impact on, and relationship to, adjoining verandas; and e. the enabling of unobstructed kerbside movements of high-sided vehicles.	C

<p>15.5.9</p>	<p>Glare</p> <ol style="list-style-type: none"> all exterior lighting, other than footpath or pedestrian link amenity lighting, installed on sites or buildings within the zone shall be directed away from adjacent sites, roads and public places, and directed downward so as to limit the effects on views of the night sky; no activity shall result in a greater than 10 lux spill (horizontal or vertical) of light onto any adjoining property within the Zone, measured at any point inside the boundary of any adjoining property; no activity shall result in a greater than 3 lux spill (horizontal or vertical) of light onto any adjoining property which is in any Residential zone or Township Zone measured at any point more than 2m inside the boundary of the adjoining property; all roofs of buildings shall be finished or treated so they do not give rise to glare when viewed from any public place or neighbouring property. 	<p>NC</p>									
<p>15.5.10</p>	<p>Retail and Office activities</p> <ol style="list-style-type: none"> individual Retail activities shall not exceed 300m² gross floor area; individual Office activities shall not exceed 200m² gross floor area. <p>Note: All associated office, storage, staffroom and bathroom facilities used by the activity shall be included in the calculation of the gross floor area.</p>	<p>NC</p>									

15.5.11	Standards for activities located in the Local Shopping Centre Zone Retail and Office Activities in the Local Shopping Centre Zone located at Cardrona Valley Road, Wanaka	Non-compliance Status
	<p>The total combined area of retail and office activities shall occupy no more than 3,000m² gross floor area.</p> <p>Note: For the purposes of this rule the gross floor area calculation applies to the total combined area of retail and office activities within the entire Local Shopping Centre Zone at Cardrona Valley Road.</p>	D

15.6

Rules - Non-Notification of Applications

15.6.1 Applications for Controlled activities shall not require the written approval of other persons and shall not be notified or limited-notified.

15.6.2 The following Restricted Discretionary activities shall not require the written approval of other persons and shall not be notified or limited-notified:

15.6.2.1 Buildings (Rule 15.4.3).

15.6.2.2 Building coverage, except for applications to exceed permitted building coverage between Hansen Road and Frankton Cemetery (Rule 15.5.1.2).

15.6.3 The following Restricted Discretionary activities will not be publicly notified but notice will be served on those persons considered to be adversely affected if those persons have not given their written approval:

15.6.3.1 Setbacks and sunlight access – sites adjoining any Residential zone, Township Zone or public open space.

Appendix 5: Chapter 16 – Business Mixed Use Zone as Recommended

16 BUSINESS MIXED USE

16.1 Purpose

The intention of this zone is to provide for complementary commercial, business, retail and residential uses that supplement the activities and services provided by town centres. Higher density living opportunities close to employment and recreational activities are also enabled. Significantly greater building heights are enabled in the Business Mixed Use Zone in Queenstown, provided that high quality urban design outcomes are achieved.

16.2 Objectives and Policies

16.2.1 Objective – An area comprising a high intensity mix of compatible residential and non-residential activities is enabled.

Policies

- 16.2.1.1** Accommodate a variety of activities while managing the adverse effects that may occur and potential reverse sensitivity.
- 16.2.1.2** Enable a range and mix of compatible business, residential and other complementary activities to achieve an urban environment that is desirable to work and live in.
- 16.2.1.3** Avoid activities that have noxious, offensive, or undesirable qualities from locating within the Business Mixed Use Zone to ensure that a high quality urban environment is maintained.
- 16.2.1.4** For sites adjoining Gorge Road in Queenstown, discourage the establishment of high density residential and visitor accommodation activities at ground floor level, except where commercial and/or business activities continue to have primacy at the interface with the street.
- 16.2.1.5** Provide appropriate noise limits to minimise adverse noise effects received within the Business Mixed Use Zone and by nearby properties.
- 16.2.1.6** Ensure that residential development and visitor accommodation provide acoustic insulation over and above the minimum requirements of the Building Code to limit the potential for reverse sensitivity effects.
- 16.2.1.7** Ensure that the location and direction of lights does not cause significant glare to other properties, roads and public places and promote lighting design that mitigates adverse effects on views of the night sky and provide a safe and well-lit environment for pedestrians.
- 16.2.1.8** Ensure that outdoor storage areas are appropriately located and screened to limit any adverse visual effects on public places and adjoining residential zones.
- 16.2.1.9** Minimise opportunities for criminal activity through incorporating Crime Prevention Through Environmental Design (CPTED) principles as appropriate in the design of lot configuration and the street network, carparking areas, public and semi-public spaces, accessways/pedestrian links/lanes, and landscaping.

16.2.2 Objective – New development achieves high quality building and urban design outcomes that minimises adverse effects on adjoining residential areas and public spaces.

Policies

- 16.2.2.1** Require the design of buildings to contribute positively to the visual quality, vitality, safety and interest of streets and public spaces by providing active and articulated building frontages, and avoid large expanses of blank walls fronting public spaces.
- 16.2.2.2** Require development close to residential zones to provide suitable screening to mitigate adverse visual effects, loss of privacy, and minimise overlooking and shading effects to residential neighbours.
- 16.2.2.3** Require a high standard of amenity, and manage compatibility issues of activities within and between developments through site layout, landscaping and design measures.
- 16.2.2.4** Utilise and, where appropriate, link with public open space nearby where it would mitigate any lack of open space provision on the development site.
- 16.2.2.5** Incorporate design treatments to the form, colour or texture of buildings to add variety, moderate their scale and provide visual interest from a range of distances.
- 16.2.2.6** Where large format retail is proposed, it should be developed in association with a variety of integrated, outward facing uses to provide reasonable activation of building facades.
- 16.2.2.7** Allow buildings between 12m and 20m heights in the Queenstown Business Mixed Use Zone in situations when:
- the outcome is of high quality design;
 - the additional height would not result in shading that would adversely impact on adjoining Residential zoned land and/or public space; and
 - the increase in height would facilitate the provision of residential activity.
- 16.2.2.8** Apply consideration of the operational and functional requirements of non-residential activities as part of achieving high quality building and urban design outcomes.
- 16.2.2.9** Encourage the layout and design of new buildings and landscaping to integrate with Horne Creek where feasible.

16.2.3 Objective – The development of land north of State Highway 6 (between Hansen Road and Ferry Hill Drive) provides a high quality environment which is sensitive to its location at the entrance to Queenstown, minimises traffic impacts to the State Highway network, and is appropriately serviced.

Policies

16.2.3.1 Encourage a low impact stormwater design that utilises on-site treatment and storage / dispersal approaches.

16.2.3.2 Avoid the impacts of stormwater discharges on the State Highway network.

16.2.3.3 Provide a planting buffer along the State Highway frontage to soften the view of buildings from the State Highway network.

16.2.3.4 Provide for safe and legible transport connections that avoid any new access to the State Highway, and integrates with the road network and public transport routes on the southern side of State Highway 6.

Note: Attention is drawn to the need to consult with the New Zealand Transport Agency (NZTA) prior to determining an internal and external road network design under this policy.

Note: Attention is drawn to the need to obtain a Section 93 notice from the NZ Transport Agency for all subdivisions on State Highways which are declared Limited Access Roads. The NZ Transport Agency should be consulted and a request made for a notice under Section 93 of the Government Roading Powers Act 1989.

16.2.3.5 Require that the design of any road or vehicular access within individual properties is of a form and standard that accounts for long term traffic demands for the area between Hansen Road and Ferry Hill Drive, and does not require the need for subsequent retrofitting or upgrade.

16.2.3.6 Provide a safe and legible walking and cycle environment that links to the other internal and external pedestrian and cycle networks and destinations on the southern side of State Highway 6 along the safest, most direct and convenient routes.

Note: Attention is drawn to the need to consult with the New Zealand Transport Agency (NZTA) to determine compliance with this policy.

16.2.3.7 Require the provision of an internal road network that ensures road frontages are not dominated by vehicular access and parking.

16.2.3.8 Ensure coordinated, efficient and well-designed development by requiring, prior to, or as part of subdivision and development, construction of the following to appropriate Council standards:

- a. A 'fourth leg' off the Hawthorne Drive/SH6 roundabout;
- b. All sites created in the area to have legal access to either Hansen Road or the Hawthorne Drive/SH6 roundabout; and
- c. New and safe pedestrian connections between the Hawthorne Drive/SH6 roundabout, Ferry Hill Drive and the southern side of SH6.

16.2.3.9 Encourage the creation of a legal internal road between Hansen Rd and Ferry Hill Drive.

16.3.1 District Wide

Attention is drawn to the following District Wide chapters.

1	Introduction	2	Definitions	3	Strategic Direction

16.3.2 Interpreting and Applying the Rules

- 16.3.2.1** A permitted activity must comply with all the rules listed in the Activity and Standards tables.
- 16.3.2.2** Where an activity does not comply with a Standard listed in the Standards table, the activity status identified by the 'Non-Compliance Status' column shall apply unless otherwise specified.
- 16.3.2.3** Where an activity breaches more than one Standard, the most restrictive status shall apply to the Activity.
- 16.3.2.4** The following abbreviations are used within this Chapter.

P	Permitted	C	Controlled	RD	Restricted Discretionary
D	Discretionary	NC	Non-Complying	PR	Prohibited

16.4 Rules - Activities

Activities located in the Business Mixed Use Zone		Activity Status

<p>16.5.10</p> <p>Glare</p> <p>16.5.10.1 All exterior lighting installed on sites or buildings shall be directed away from adjacent sites, roads and public places, except footpath or pedestrian link amenity lighting and directed downward so as to limit the effects on views of the night sky.</p> <p>16.5.10.2 No activity shall result in a greater than 10 lux spill (horizontal or vertical) of light onto any adjoining property within the Business Mixed Use Zone, measured at any point inside the boundary of any adjoining property.</p> <p>16.5.10.3 No activity shall result in a greater than 3 lux spill (horizontal or vertical) of light onto any adjoining property which is in a Residential Zone measured at any point more than 2m inside the boundary of the adjoining property.</p> <p>16.5.10.4 External building materials shall either:</p> <ol style="list-style-type: none"> be coated in colours which have a reflectance value of between 0 and 36%; or consist of unpainted wood (including sealed or stained wood), unpainted stone, unpainted concrete, or copper. <p>Except that:</p> <ol style="list-style-type: none"> architectural features, including doors and window frames, may be any colour; and roof colours shall have a reflectance value of between 0 and 20%. 	<p>NC</p>									

16.5.11	Standards for activities located in the Business Mixed Use Zone Development on land north of State Highway 6 between Hansen Road and Ferry Hill Drive shall provide the following:	Non-compliance Status
	<p>16.5.11.1 Transport, parking and access design that:</p> <p>Ensures connections to the State Highway network are only via Hansen Road, the Hawthorne Drive/SH6 Roundabout, and/or Ferry Hill Drive.</p> <p>There is no new vehicular access to the State Highway Network.</p> <p>16.5.11.2 Where a site adjoins State Highway 6, landscaping provides a planting buffer fronting State Highway 6 as follows:</p> <ol style="list-style-type: none"> a. a density of two plants per square metre located within 4m of the State Highway 6 road boundary selected from the following species: <ol style="list-style-type: none"> i. Ribbonwood (<i>Plagianthus regius</i>) ii. <i>Corokia cotoneaster</i> iii. <i>Pittosporum tenuifolium</i> iv. <i>Grisilinea</i> v. <i>Coprosma propinqua</i> vi. <i>Olearia dartonii</i> b. once planted these plants are to be maintained in perpetuity. 	NC

16.6

Rules - Non -Notification of Applications

16.6.1 Applications for Controlled activities shall not require the written approval of other persons and shall not be notified or limited-notified.

16.6.2 The following Restricted Discretionary activities shall not require the written approval of other persons and shall not be notified or limited-notified:

16.6.2.1 Buildings.

16.6.2.2 Building Heights between 12m and 20m in the Business Mixed Use Zone in Queenstown.

16.6.3 The following Restricted Discretionary activities will not be publicly notified but notice will be served on those persons considered to be adversely affected if those persons have not given their written approval:

16.6.3.1 Setbacks and sunlight access – sites adjoining, or separated by a road from a Residential zone.

Appendix 6: Chapter 17 – Airport Zone as Recommended

17 AIRPORT ZONE

17.1 Zone Purpose

The purpose of the Airport Zone is to provide for a range of airport and airport related activities at Queenstown and Wanaka Airports and to recognise the unique role of the airports in providing for the social and economic wellbeing of the community.

Queenstown Airport provides facilities for the transportation of people and freight and is a key asset to the District in terms of supporting the tourism industry and the needs of local and business travellers.

Queenstown Airport acts as an important gateway into the District and facilitates access and economic activity in the local and broader regional economies.

The Airport's main function is for domestic and international scheduled passenger movements as well as freight. Queenstown Airport is recognised as a nationally significant asset in the light of its significant contribution to the tourism industry. Queenstown Airport also provides facilities and infrastructure for helicopter, flightseeing and general aviation operations. It is also a critical provider of emergency services and is a lifeline utility under the Civil Defence Emergency Management Act 2002.

International tourism is New Zealand's largest foreign exchange earner and the Queenstown Lakes District tourism industry is heavily reliant on air transport. Queenstown Airport is a significant source of employment for the District.

Wanaka Airport is Regionally Significant Infrastructure to the District and is an important commercial and recreational aviation hub for the Upper Clutha. Wanaka Airport may one day accommodate scheduled and chartered air transport services.

The Airport Zone applies to all land used for airport and airport-related activities at Queenstown and Wanaka Airports. The Zone rules apply a range of performance standards to manage the effects of land uses carried out at the Airports on amenity values.

The objectives and provisions for Wanaka Airport reflect the more remote location of Wanaka Airport outside of the Wanaka Urban Growth Boundary and seek to avoid adverse effects from inappropriate commercial activities locating at the Airport. The strategic importance to the District of both airports and the finite nature of the land resource for both airports is also recognised in the Airport Zone provisions.

17.2 Objectives and Policies

17.2.1 Objective – Queenstown Airport is maintained as nationally significant infrastructure and a generator of nationally and regionally significant economic, social and cultural benefits.

- | | |
|----------|--|
| Policies | <p>17.2.1.1 Provide for those aviation activities necessary to enable Queenstown Airport to operate in a safe and efficient manner.</p> <p>17.2.1.2 Provide for a range of airport related service, business, industrial and commercial activity to support or complement the functioning of Queenstown Airport.</p> |
|----------|--|

17.2.2 Objective – Wanaka Airport remains a key strategic infrastructural asset supporting the well-being of the District.

Policies

- 17.2.2.1** Enable airport activities at Wanaka Airport which can operate in a safe and efficient manner.
- 17.2.2.2** Ensure land uses including Airport Related Activities have a legitimate relationship with Airport Activities and are only allowed where they are of a size (either individually or cumulatively) that:
 - a. is ancillary to and support part of the operation of an Airport Activity; and
 - b. do not adversely affect the key local service and employment function of Wanaka Town Centre or other commercially zoned areas within the District.
- 17.2.2.3** Only allow retail and food and beverage facilities which are designed and operated and of a nature, scale and intensity to service visitors, passengers or workers engaged in or associated with Airport Activities or Airport Related Activities within the Wanaka Airport zone, and are unlikely to attract significant patronage outside of this purpose.
- 17.2.2.4** Ensure buildings and activities are adequately serviced with a water supply for fire-fighting purposes as well as provision of potable water, sewage treatment and disposal.

17.2.3 Objective – Airport Activities and Airport Related Activities are provided for at Queenstown and Wanaka Airports while maintaining an acceptable level of noise amenity, and high levels of general amenity for those using the airports and for those residing on neighbouring land.

Policies

- 17.2.3.1** Maintain Queenstown Airport as a memorable and attractive gateway to the District.
- 17.2.3.2** Manage adverse effects on amenity values arising from the on-going development, use and maintenance of Queenstown and Wanaka Airports.
- 17.2.3.2** Avoid the establishment of activities that are incompatible with the ongoing operation and functioning of Queenstown Airport.

17.3 Other Provisions and Rules

17.3.1 District Wide

Attention is drawn to the following District Wide chapters.

1	Introduction	2	Definitions	3	Strategic Direction
4	Urban Development	5	Tangata Whenua	25	<i>Earthworks</i>
26	Historic Heritage	27	Subdivision	28	Natural Hazards
29	<i>Transport</i>	30	Energy and Utilities	31	<i>Signs</i>
32	Protected Trees	35	Temporary Activities and Relocated Buildings	36	Noise
37	Designations		Planning Maps		

17.3.2 Interpreting and Applying the Rules

- 17.3.2.1** A permitted activity must comply with all the rules listed in the relevant Activity and Standards tables.
- 17.3.2.2** Where an activity does not comply with a Standard listed in the relevant Standards table, the activity status identified by the 'Non-Compliance Status' column shall apply.
- 17.3.2.3** Where an activity breaches more than one Standard, the most restrictive status shall apply to the Activity.
- 17.3.2.4** The activities listed in Table 1 and the standards contained in Table 2 apply to Queenstown Airport.
- 17.3.2.5** The activities listed in Table 3 and the standards contained in Table 4 apply to Wanaka Airport.
- 17.3.2.6** Activities undertaken within, or within the immediate environs of, the Queenstown airport terminal facility are exempt from complying with any minimum parking requirement in Chapter 29.
- 17.3.2.7** The following abbreviations are used within this Chapter.

P	Permitted	C	Controlled	RD	Restricted Discretionary
D	Discretionary	NC	Non-Complying	PR	Prohibited

Rules - Standards Airport Zone - Wanaka

Table 4	Standards for activities located in the Airport Zone - Wanaka	Non-compliance status
<p>17.7.1</p>	<p>Minimum Building Setback</p> <p>17.7.1.1 The setback from all zone boundaries shall be 5m.</p> <p>17.7.1.2 The setback from the eastern side of the centreline of the main runway (as at 2013) shall be 217 metres.</p> <p>17.7.1.3 The setback from the western side of the centre line of the main runway (as at 2013) shall be 124 metres.</p> <p>17.7.1.4 The setback from any public road shall be 5m.</p> <p>Except no setbacks shall apply to security fencing greater than 2m in height.</p>	<p>RD</p> <p>Discretion is restricted to:</p> <ul style="list-style-type: none"> a. for all non-compliances: <ul style="list-style-type: none"> i. the purpose of the building and the operational requirements of the activity it contains. b. for non-compliances with 17.7.1.1 or 17.7.1.4 only: <ul style="list-style-type: none"> i. the external appearance, location and visual dominance of the building as viewed from the public roads and adjacent properties; ii. amenity and character of the surrounding Rural Zone; iii. access to sunlight, shading and privacy of adjoining properties; iv. views to and from Outstanding Natural Features and Landscapes. c. for non-compliances with 17.7.1.2 or 17.7.1.3 only: <ul style="list-style-type: none"> i. the effects on the current and future operation of the Airport.

Table 4	Standards for activities located in the Airport Zone - Wanaka	Non-compliance status
17.7.2	<p>Maximum Building Height</p> <p>The maximum height of all buildings shall be 10m.</p> <p>Except this limit shall not apply to control towers, lighting towers or navigation and communication masts and aerials which are not subject to a height limit.</p>	<p>RD</p> <p>Discretion is restricted to:</p> <ul style="list-style-type: none"> a. visual effects of the bulk and location non-compliance when viewed from the boundary of the zone; b. the purpose of the building and the operational requirements of the activity it contains; c. the external appearance, location and visual dominance of the building as viewed from the public roads and adjacent properties; d. amenity and character of the surrounding Rural Zone; e. access to sunlight, shading and privacy of adjoining properties; f. views to and from Outstanding Natural Features and Landscapes.
17.7.3	<p>Lighting and Glare</p> <p>Within all landside areas, all lighting shall:</p> <p>17.7.3.1 ensure that direct or indirect illumination does not exceed 3 lux spill of light at any adjacent site.</p> <p>17.7.3.2 be directed away from adjoining sites and roads;</p> <p>17.7.3.3 not be directed upwards.</p>	<p>NC</p>
17.7.4	<p>Identified Airport Related Activities - Maximum Gross Floor Area</p> <p>The following activities shall not exceed 100m² in Gross Floor Area as part of any single activity:</p> <p>17.7.4.1 cafes and other food and beverage facilities;</p> <p>17.7.4.2 retail activities;</p> <p>17.7.4.3 offices.</p>	<p>D</p>
17.7.5	<p>Hours of Operation for Airport Related Activities</p> <p>The hours of operation for the following Airport Related Activities may only fall between 6.00 am and 10.00 pm:</p> <p>17.7.5.1 cafes and other food and beverage facilities;</p> <p>17.7.5.2 retail activities.</p>	<p>NC</p>

Table 4	Standards for activities located in the Airport Zone - Wanaka	Non-compliance status
<p>17.7.6</p> <p>Air shows</p> <p>17.7.6.1 The air show (including set up, flying programme and pack down) shall be limited to 12 days inclusive.</p> <p>17.7.6.2 The flying programme for the air show shall be limited to a period of not more than five days.</p> <p>17.7.6.3 The air show event must not operate outside of the hours of 0800 and 2000. Set up and pack down outside of these hours is permitted.</p> <p>17.7.6.4 The air show operator shall hold a Council approved plan detailing the noise, environmental management and traffic (vehicle and pedestrian movements, public transport, parking and management of adverse effects on operation of the State Highway) aspects of the air show. A report containing the draft plan shall be submitted to the Council for approval, no later than 30 working days prior to the air show taking place.</p> <p>The noise standards in Rule 36.5.14 shall not apply to Air Shows complying with the above standards.</p>	<p>RD</p> <p>Discretion is restricted to:</p> <ul style="list-style-type: none"> a. adverse amenity effects for surrounding landowners; b. measures to avoid, remedy or mitigate the adverse amenity effects; c. adverse traffic and transport effects including effects from parking. 	

17.8

Rules - Non-Notification of Applications

17.8.1 All applications for controlled activities shall not require the written approval of other persons and shall not be notified or limited notified.

17.9

Non-Regulatory Methods

17.9.1 Council will use advocacy to promote good urban design and form at Queenstown Airport.

17.9.2 As the major requiring authority in the Airport Zone at Queenstown, the Queenstown Airport Corporation will adopt best practice urban design and urban design led principles at Queenstown Airport.

17.9.3 The Queenstown Airport Corporation shall prepare an urban design guideline for the Queenstown Airport Use Zone. The urban design guideline shall promote a built form and character which maintains the Airport and its surrounds as an attractive gateway to the district.

Appendix 8: Definitions Recommended to Stream 10 Hearing Panel for Inclusion in Chapter 2

Aircraft	Means any machine that can derive support in the atmosphere from the reactions of the air otherwise than by reactions of the air against the surface of the earth. Excludes remotely piloted aircraft that weigh less than 15 kilograms.
Airport Activity	Means land used wholly or partly for the landing, departure, and surface movement of aircraft, including: <ul style="list-style-type: none"> a. aircraft operations, which include private aircraft traffic, domestic and international aircraft traffic, rotary wing operations; b. aircraft servicing, general aviation, airport or aircraft training facilities and associated offices. c. runways, taxiways, aprons, and other aircraft movement areas; d. terminal buildings, hangars, air traffic control facilities, flight information services, navigation and safety aids, rescue facilities, lighting, car parking, maintenance and service facilities, fuel storage and fuelling facilities, and facilities for the handling and storage of hazardous substances.
Airport Related Activity	Means an ancillary activity or service that provides support to the airport. This includes: <ul style="list-style-type: none"> a. land transport activities b. buildings and structures c. servicing and infrastructure d. police stations, fire stations, medical facilities and education facilities provided they serve an aviation related purpose e. retail and commercial services, and industry associated with the needs of Airport passengers, visitors and employees and/or aircraft movements and Airport businesses f. catering facilities g. quarantine and incineration facilities h. border control and immigration facilities i. administrative offices (provided they are ancillary an Airport or Airport Related Activity).
Critical Listening Environment	Means any space that is regularly used for high quality listening or communication for example principle living areas, bedrooms and classrooms but excludes non-critical listening environments.
Hangar	Means a structure used to store aircraft, including for maintenance, servicing and/or repair purposes.
Landside	Means an area of an airport and buildings to which the public has unrestricted access.
Outer Control Boundary (OCB)	Means a boundary, as shown on the District Plan Maps, the location of which is based on the future predicted day/night sound levels of 55 dBA Ldn from airport operations.
Projected Annual Aircraft Noise Contour (AANC)	Means the Projected Annual Aircraft Noise Contours calculated as specified by the Aerodrome Purposes Designation 2, Condition 13.
Remotely Piloted Aircraft	Means an unmanned aircraft that is piloted from a remote station.

PART A: INTRODUCTORY MATTERS

1. PRELIMINARY MATTERS

1.1. Terminology in this Report

1. Throughout this report, we use the following abbreviations:

Act	Resource Management Act 1991 as it stood prior to 19 April 2017
Council	Queenstown Lakes District Council
Clause 16(2)	clause 16(2) of the First Schedule to the Act
NPSET 2008	National Policy Statement for Electricity Transmission 2008
NZTA	New Zealand Transport Authority
ODP	the Operative District Plan for the Queenstown Lakes District as at the date of this report
ONF	Outstanding Natural Feature(s)
ONL	Outstanding Natural Landscape(s)
PDP	Stage 1 of the Proposed District Plan for Queenstown Lakes District as publicly notified on 26 August 2015
Proposed RPS	the Proposed Regional Policy Statement for the Otago Region as modified by decisions on submissions and dated 1 October 2016
Proposed RPS (notified)	the Proposed Regional Policy Statement for the Otago Region dated 23 May 2015
QAC	Queenstown Airport Corporation
RPS	the Operative Regional Policy Statement for the Otago Region dated October 1998
UCES	Upper Clutha Environmental Society
Stage 2 Variations	The variations, including changes to the existing text of the PDP, notified by the Council on 23 November 2017

1.2. Topics Considered:

2. There were three topics of this hearing:

- a. Whole of Plan submissions;
- b. Chapter 2 (Definitions);
- c. Chapter 28 (Natural Hazards).

3. The hearing of these matters collectively comprised Hearing Stream 10.

4. Whole of Plan submissions were classified as such by reason of the fact that they did not relate to a specific part or parts of the PDP. In effect, this was the opportunity for submissions that did not fall neatly into any one of the previous hearing streams to be heard.
5. Chapter 2 of the PDP sets out definitions of terms used in the PDP. Some 256 separate terms are defined in Chapter 2.
6. Chapter 28 is the Chapter of the PDP related to natural hazards. It has five subheadings:
 - a. 28.1 – Purpose;
 - b. 28.1 – Natural hazard Identification;
 - c. 28.3 – Objectives and policies;
 - d. 28.4 – Other relevant provisions;
 - e. 28.5 – Information requirements.

1.3. Hearing Arrangements:

7. The hearing of Stream 10 took place over four days. The Hearing Panel sat in Queenstown on 14-16 March 2017 inclusive and in Wanaka on 17 March 2017.
8. The parties we heard on Stream 10 were:

Council:

- Sarah Scott (Counsel)
- Amy Bowbyes
- Amanda Leith
- Craig Barr

Federated Farmers of New Zealand¹:

- Phil Hunt

Bunnings Limited²:

- Daniel Minhinnick (Counsel)
- Elizabeth Davidson
- Tim Heath
- Kay Panther Knight

Cardrona Station Limited³, Ayrburn Farm Estate Limited⁴ and Arcadian Triangle Limited⁵:

- Warwick Goldsmith (Counsel)

Real Journeys Limited⁶ and Te Anau Developments Limited⁷:

- Fiona Black

Otago Regional Council⁸:

1 Submission 600/Further Submission 1132
 2 Submission 746
 3 Submission 407
 4 Submission 430
 5 Submission 836/Further submission 1255
 6 Submission 621/Further submission 1341
 7 Submission 607/Further submission 1342
 8 Submission 798

- Ralph Henderson

Remarkables Park Limited⁹ and Queenstown Park Limited¹⁰:

- Tim Williams

Pounamu Holdings 2014 Limited¹¹:

- Scott Freeman

- Niki Gladding¹²

- Leigh Overton¹³

UCES¹⁴:

- Julian Haworth

9. We also received written material from the following parties who did not appear:
- Chorus New Zealand Limited¹⁵, Spark New Zealand Trading Limited¹⁶ and Vodafone New Zealand Limited¹⁷ (a representation penned by Matthew McCallum-Clark).
 - QAC¹⁸ (a statement of evidence of Kirsty O’Sullivan).
 - Ministry of Education¹⁹ (a statement of evidence of Julie McMinn).
 - Southern District Health Board²⁰ (a statement of evidence of Julie McMinn).
 - Aurora Energy Limited²¹ (a memorandum of Bridget Irving (Counsel)).
 - Transpower New Zealand²² (a representation penned by Jess Bould).
 - New Zealand Police²³ (a letter from Michael O’Flaherty (counsel)).
 - New Zealand Transport Agency²⁴ (a letter from Tony MacColl).
 - Z Energy Limited, BP Oil Company Limited and Mobil Oil Company Limited²⁵ (statement by Mark Laurenson).
10. In addition, we received additional written material from parties who did appear:
- Mr Young provided written submissions on behalf of Queenstown Park Limited and Remarkables Park Limited, but did not appear at the hearing.
 - Ms Black provided further comments to the Hearing Panel on definitions on behalf of Real Journeys Limited and Te Anau Developments Limited.

⁹ Submission 806

¹² Further Submission 1170
¹³ Submission 465
¹⁴ Submission 145 and Further Submission 1034
¹⁵ Submission 781
¹⁶ Submission 191
¹⁷ Submission 197
¹⁸ Submission 433/Further Submission 1340
¹⁹ Submission 524
²⁰ Submission 678
²¹ Submission 635
²² Submission 805/Further Submission 1301
²³ Submission 57
²⁴ Submission 719
²⁵ Collectively Submission 768 and Further Submission 1182

- c. A Memorandum of Counsel (Mr Minhinnick) on behalf of Bunnings Limited dated 17 March 2017.

1.4. Procedural Issues:

- 11. The hearing proceeded in accordance with the procedural directions applying to the PDP hearings generally, summarised in Report 1. The only material variation from those directions was the number of parties (summarised above) who sought leave to table evidence and/or representations in lieu of appearance and in the filing of additional material for Real Journeys/Te Anau Developments Limited and for Bunnings Limited summarised above, providing further information following their respective appearances.
 - 12. We also note that, following a discussion during presentation of the Council case, counsel advised in her submissions in reply that in a limited number of cases, Ms Leith had recommended changes to definitions considered in previous hearings, but the submitters at those earlier hearings had not received notice of the Stream 10 hearing. Counsel considered this could raise natural justice issues. We agreed with that view and consequently directed that the submitters in this category should have the opportunity to make written submissions on Ms Leith's recommendations²⁶. No party took up that opportunity.
 - 13. The Stage 2 Variations were notified on 23 November 2018. They include changes- both deletions and amendments - to a number of the definitions in Chapter 2.
 - 14. Clause 16B(1) of the First Schedule to the Act provides that submissions on any provision the subject of variation are automatically carried over to hearing of the variation.
 - 15. Accordingly, for those Chapter 2 definitions the subject of the Stage 2 Variations, we have 'greyed out' the relevant definition/ part definition (as notified) in the revised version of Chapter 2 attached as Appendix 1 to this Report, in order to indicate that those definitions did not fall within our jurisdiction.
- #### 1.5. Statutory Considerations:
- 16. The Hearing Panel's Report 1 contains a general discussion of the statutory framework within which submissions and further submissions on the PDP should be considered, including matters that have to be taken into account, and the weight to be given to those matters.
 - 17. The nature of the matters raised in submissions on the Whole of Plan sector of the hearing, and on Definitions means that the statutory considerations noted in Report 1 are of limited relevance or assistance to us. We have nevertheless had regard to those matters as relevant. The statutory considerations come much more clearly into focus in relation to Chapter 28 (Natural Hazards) and we will discuss those matters in greater detail in that context.
 - 18. Related to the above, as is the case for previous reports, we have not undertaken a separate section 32AA analysis of the changes to the PDP recommended in this report. Rather, our reasons for our recommendations in terms of the statutory tests contained in section 32 are incorporated in this report.

²⁶ Refer the Chair's Memorandum dated 7 August 2017

PART B: WHOLE OF PLAN:

2. PRELIMINARY

19. Mr Barr's Section 42A Report discussed the whole of plan submissions under 8 issues, as follows:
 - a. Issue 1 – The PDP does not accord with the requirements of the RMA;
 - b. Issue 2 – Staged review;
 - c. Issue 3 – Reduction of prescription and use of an effects based approach
 - d. Issue 4 - Extent of discretion;
 - e. Issue 5 - "Appropriately qualified or experienced" expert reports;
 - f. Issue 6 – Default activity status for unlisted activities;
 - g. Issue 7 – Avoidance of conflicts between water based activities and surrounding activities; and
 - h. Issue 8 – Cost of infrastructure to council.
20. We will follow the same format.
21. Mr Barr also noted a number of submissions as either being out of scope or already addressed in another hearing stream. We accept Mr Barr' recommendations on these submissions in the absence of any conflicting evidence, and do not address those submissions further. Mr Barr also noted that errors or minor issues identified in the PDP²⁷ had already been addressed under Clause 16(2), meaning no recommendation was required from us.
22. In one case, Mr Barr provided his reasoning in the schedule of submitters. This is in relation to submissions²⁸ seeking a policy that established wilding exotic trees be removed as a condition of consent for subdivision, use or development of land in residential or rural living zones. Mr Barr recommended rejection of that submission on the basis that the trees might already be the subject of resource consent or existing use rights, and that subdivision does not always confer development rights. These are all valid reasons, but more importantly to our mind, the submitter provided no evidence of the cost of such action, that might be weighed against the benefits. We recommend the submission be rejected.
23. At this high level, a number of submissions categorised as 'whole of plan' submissions were catchall submissions, seeking to make it clear that they sought consequential or alternative relief, as required, without identifying what that consequential or alternative relief might be. Such submissions are routinely made by submitters in First Schedule processes out of an abundance of caution. We do not regard it as necessary to explicitly seek consequential or alternative relief to the same effect. The Hearing Panel has treated primary submissions as not being restricted to the precise relief sought. We therefore do not categorise these catchall submissions as in fact asking for any particular relief, and on that basis, we recommend they be rejected.
24. In the case of both consequential and alternative relief, while we recommend rejection of the submission on a 'whole or plan' basis, that is without prejudice to the recommendations other Hearing Panels have made in the context of particular parts of the PDP.

²⁷ By Council submission (383) and that of NZTA 719)

²⁸ Submissions 177 and 514 (D Fea)

25. Lastly, a number of submissions noted in the submission schedules were not valid submissions, because they sought no relief (or no clear relief) in terms of changes to the PDP (or retention of its existing provisions). We have made no recommendation in respect of such ‘submissions’.

3. WHOLE OF PLAN ISSUES

3.1. Accordance with the requirements of the RMA:

26. The submissions Mr Barr addressed under this heading²⁹ were generally expressed complaints about the inadequacy of the PDP with reference to Section 5 of the Act, Part 2 of the Act and Section 32 of the Act. None of the submitters in question appeared before us to explain why the PDP was flawed in the relevant respect.
27. Mr Barr noted a number of other submissions³⁰ seeking that the PDP be put on hold (or withdrawn and renotified) until a proper/further Section 32 analyses had been undertaken. Many of the submissions were focused on particular aspects of the PDP but, again, other than UCES, none of submitters in question sought to explain to us why they held this view. As Mr Barr noted, the more specific relief has in each case been addressed in other hearings.
28. In Report 7³¹, we discuss the fact that a submission criticising the section 32 analysis needs to be accompanied by a request for a change to the PDP to be of any value – as we have no jurisdiction over the section 32 analysis the Council has undertaken, only over the PDP itself.
29. We agree with Mr Barr’s comment that viewed on their own, without regard to the more specific relief sought by submitters, these general submissions are problematic because of the difficulty potentially interested parties would have in identifying, still less responding, to the relief as sought.
30. To the extent that the submitters were specific, through seeking deletion of whole chapters of the PDP, we would have required cogent evidence and analysis before concluding that was warranted.
31. In the event, the only submitter to appear and argue for such wide-ranging relief was UCES. We will address that submission later, in a separate section.
32. To the extent, however, that other submissions sought relief on the basis generally that the PDP did not accord with the requirements of the RMA, we do not find those submissions to have been made out at the higher level at which the submissions were pitched.
33. There are of course many aspects of the PDP where the respective Hearing Panel has concluded that more specific submissions on the flaws of the PDP have some merit, but those points have been addressed in those other reports.

²⁹ He instanced Submissions 414, 670, 715 and 811: Supported by FS1097, FS1145 and FS1255; Opposed by FS1071, FS1073, FS1103, FS1108, FS1114, FS1116, FS1192, FS1218, FS1219, FS1224, FS1225, FS1237, FS1247, FS1250, FS1252, FS1277, FS1283, FS1292, FS1293, FS1299, FS1316 and FS1321

³⁰ Submissions 145, 338, 361, 414, and 850; Supported by FS1097, FS1118, FS1229, FS1255 and FS1270; Opposed by FS1071, FS1097, FS1114, FS1155, FS1162, FS1289 and FS1347

³¹ By the Council submission (383) and that of NZTA (719)

3.2. Staged Review

34. Under this heading, Mr Barr noted submissions³² opposing the staged review process being undertaken in respect of the PDP. The submitters sought variously that the entire District Plan be put on hold or rejected until the remaining chapters are included in the review and that it be withdrawn and renotified with a transport chapter.
35. While, as noted in other reports, the staged review process has introduced considerable complexity into the hearing process, we agree with Mr Barr's conclusion that these are not submissions on the PDP that we can properly entertain. Section 79 of the Act provides that Regional Policy Statements, Regional Plans and District Plans may be reviewed in whole or in part. The resolutions of Council determining what matters are reviewed is the exercise of a statutory discretion that would need to be challenged, if it is to be challenged at all, in either the High Court or (possibly) the Environment Court. Our role is to make recommendations on matters the Council has chosen to review (and not subsequently withdrawn pursuant to clause 8D of the First Schedule of the Act).
36. Accordingly, we do not have jurisdiction to consider the submissions in question. They must necessarily be rejected.
37. Mr Barr identifies a related submission on the part of Remarkables Park Limited³³ supporting the exclusion of the Remarkables Park Zone from the PDP and seeking that the PDP be amended to clarify the exclusion.
38. As Mr Barr notes, this submission has effectively been overtaken by the Council's resolution to withdraw the Remarkables Park Zone land from the PDP³⁴ (and thereby remove it from our jurisdiction). This has necessitated amendment to some Chapters of the Plan referring to that Zone. Those matters are addressed in other hearing reports.

3.3. Reduction of Prescription and Use of an Effects Based Approach

39. Mr Barr notes the submission of Remarkables Park Limited³⁵ in this regard. That submission seeks reduction of prescription and enabling of an effects-based assessment of activities. It also criticises the "*direct and control*" approach to tourism, commercial, residential and industrial activities.
40. The Hearing Panel's Report 3 discusses similar criticisms made of the "*strategic chapters*" and reference should be made to that report because, as Mr Barr noted in his Section 42A Report³⁶ the very nature of chapters providing strategic direction is that they might be expected to be more guiding and strategic in nature (i.e. directive) than first generation district plans, such as the ODP, many of which were further along the spectrum towards effects-based planning.
41. With that Hearing Panel having recommended that the strategic chapters be retained we think it follows inevitably that the PDP will be less effects-based than was the ODP. We discussed this point with Mr Barr who agreed that while the ODP was a hybrid, it sat more at the effects-based end, of the spectrum whereas the PDP was more at the "*command and control*" end,

³² Submissions 249 and 414: Supported by FS1097 and FS1255; Opposed by FS1071, FS1090 and FS1136

³³ Submission 807

³⁴ Refer Council Resolutions of 29 September 2016 and 25 May 2017

³⁵ Submission 807

³⁶ At paragraph 8.2

but in his view, only to a point. He drew our attention, in particular, to the general policy approach as enabling effects-based assessment, albeit with exceptions.

42. We agree also with that characterisation.
43. Looked at more broadly, we consider that the general approach in a District Plan needs to take account of the characteristics of the district and the issues that it faces. The Hearing Panel on Chapters 3-4 and 6 concluded that the issues that Queenstown Lakes District is facing require a greater degree of direction to assist achievement of the purpose of the Act than was perhaps the case in the second half of the 1990s, when the ODP was being framed³⁷. We agree with that conclusion at the high level at which the submission is pitched. That is not to say that a case cannot be made for specific provisions to be more effects-based, but that needs to be determined on a case by case basis (and has been in earlier hearing reports).
44. Accordingly, we recommend that Submission 807 be rejected at this higher level.

3.4. Extent of Discretion:

45. Under this heading, Mr Barr drew our attention to Submissions 243³⁸ and 811³⁹ that suggest that too much within the PDP, in the submitters view, is discretionary, providing too little certainty for the community.
46. There is a certain irony given that the criticism in these submissions is, in effect, the inverse of the point raised in Submission 807 addressed under the immediately preceding heading. A plan that is at the “*command and control*” end of the spectrum has very little discretion and considerable certainty. It also has a corresponding lack of flexibility.
47. An effects-based plan has considerable flexibility (at least as to the nature of the activities that can be established) and usually, considerable discretion.
48. As noted in the previous section of this Report, the PDP lies more at the command and control end of the spectrum than the ODP, but not entirely so. We regard this as a positive feature. We do not support an extreme position providing complete certainty, and we do not think it is the most appropriate way, at a very general level, to assist achievement of the purpose of the Act.
49. As with the previous section, we note, that there are elements of the Plan that might be able to be criticised as providing too great an ambit of discretion, but the issue needs to be considered at that more specific level (as has occurred under earlier hearing reports). Accordingly, we recommend that Submissions 243 and 811 be rejected on this point.

3.5. Appropriately qualified or experienced Expert Reports:

50. Under this heading, Mr Barr notes four submissions⁴⁰ requesting deletion of provisions in the PDP that require a report from “*an appropriately qualified and experienced*” person, or alternatively clarification as to what that entails.
51. Mr Barr identified that the PDP referred to “*qualified*” persons, “*qualified and experienced*” persons, “*suitably qualified*” persons “*suitably qualified and experienced*” persons and

³⁷ Refer Report 3 at Section 1.9

³⁸ Supported by FS1117; Opposed by FS1224

³⁹ Opposed by FS1224

⁴⁰ Submissions 607, 615, 621 and 624: Supported by FS1105, FS1137 and FS1160

“*appropriately qualified*” persons, at various points. We should note in passing that we do not regard the difference between “*suitably*” and “*appropriately*” as being material in this context. Usually, these adjectives were used in conjunction with a specified discipline. Mr Barr observed that in earlier reports, the respective Staff Reporting Officer had recommended that reference to experience be deleted in each case with one exception (in Chapter 32). Mr Barr recommended that for consistency, reference to experience should be deleted in all cases.

52. None of the submitters on the point sought to amplify their submissions in evidence before us.
53. We discussed with Mr Barr whether, notwithstanding his recommendation, experience might continue to be a relevant factor and best be judged by some arbitrary nominated period of years following qualification, as is the case, for instance, for some roles requiring experience in legal practice⁴¹. Mr Barr did not favour that option and he amplified his views in reply. He suggested that any nominated period of years would be inherently arbitrary and that operating for a nominated period of years in a certain field does not always carry with it either proficiency or expertise in that field.
54. The point remains live because the provisions of the PDP recommended by the Hearing Panel continue to make reference to experience in particular fields as being both relevant and required⁴². We also consider that in many fields, experience allied to formal qualifications is desirable. Indeed, in some fields, experience is a relevant qualification, either on its own, or allied to some formal qualification. We accept Mr Barr’s point that experience is not synonymous with skill, but as Mr Barr also observed in his reply evidence, generally, some experience is better than none.
55. It follows that we do not agree with those submissions seeking that as a general rule, reference to experience should be deleted, but we agree that it would be helpful if the PDP provided greater clarity as to how much experience is sufficient. Although arbitrary, specifying experience in terms of a nominated period of years is the only objective way to capture what is required. The difficulty, however, is that no one period of years would be adequate in all contexts. What is appropriate for an arborist (in the context of Chapter 32) is probably not appropriate for an archaeologist (in the context of Chapter 26).
56. Accordingly, rather than attempt to provide an overall solution, we consider that the best approach is for the Hearing Panels recommending text referring to appropriately/suitably experienced persons in particular fields to identify where possible, the nature and extent of experience sufficient to qualify a person in that particular field.
- 3.6. **Default activity status for unlisted activities:**
57. This issue was raised in a submission by Arcadian Triangle Limited⁴³ seeking that in relation to non-complying activity status applied to unlisted activities in many zones, the default consent status for any activity not otherwise specified or listed be “*permitted*”, as is the case under the ODP.
58. Mr Barr noted that while, in some zones (most obviously the residential and rural zones) the default activity status is “*non-complying*”, in other zones such as the business zones⁴⁴,

⁴¹ See for instance Section 15 of the District Court Act 2016

⁴² See e.g. recommended Chapter 26 at section 26.2.1

⁴³ Submission 836: Supported by FS1097, FS1341 and FS1342

⁴⁴ Chapters 12-17

activities not listed are “*permitted*”. He was of the view that, where the PDP had made the default activity status non-complying, this was appropriate and should not be reversed as a matter of general principle.

59. When Mr Barr appeared before us, we sought to test the extent to which the permitted activity default status in the ODP in fact governs the situation. Mr Barr’s advice was that permitted activity status seldom applied in either the Rural General or the urban zones in practice, and that the permitted activity default was therefore potentially illusory. When Counsel for Arcadian Triangle Limited (Mr Goldsmith) appeared before us, he agreed with Mr Barr’s assessment that the ODP permitted activity default would seldom apply in practice, but said that the PDP had solved that problem (by deleting the ‘nature and scale’ standard that most activities triggered). Mr Goldsmith argued that the non-complying default status in many chapters of the PDP was unduly restrictive. He relied, in particular, on the presumption in section 9 of the Act that a land use activity can be undertaken unless constrained by a relevant rule in a District Plan. Mr Goldsmith also pointed to what he argued were anomalies in the default activity status between the Jack’s Point and Millbrook Zones (where activities not listed in the PDP are permitted) and the Waterfall Park Zone (where the default activity status is non-complying).
60. Mr Goldsmith also argued that non-complying activity status should not be afforded to activities that are not known, because there has been no section 32 evaluation that justifies non-complying status for such activities.
61. Although not resiling from his argument that the default activity status should be “*permitted*”, Mr Goldsmith contended in the alternative that if the default were anything other than permitted, it should be “*discretionary*”, as that would enable a full assessment, but not create a precedent.
62. In his reply evidence, Mr Barr discussed Mr Goldsmith’s reasoning and concluded that where the PDP had identified the activity status for unspecified activities as being non-complying, that was appropriate.
63. We agree with Mr Barr’s reasoning. As the PDP demonstrates, it is not appropriate to determine at a high level what the default activity status should be for unlisted activities. The activity status adopted has to be the most appropriate way to achieve the objectives applying to each zone.
64. We also do not accept the arguments presented by Mr Goldsmith as to why non-complying status is necessarily an inappropriate default status given the way in which the PDP has been structured. As already discussed, the PDP is deliberately more directive and less effects-based than the ODP. It seeks to provide greater certainty by nominating the activity status of a range of different activities that are anticipated in the various zones provided in the PDP. The corollary of that approach is that if activities are not listed, they are generally not anticipated and not intended to occur in that zone. That does not mean that a case cannot be mounted for unlisted activities to occur in any zone (unless they are nominated as prohibited). But in our view, it is appropriate that they be subject to rigorous testing against the objectives and policies governing the relevant zone, to determine whether they are nonetheless appropriate. In some cases, discretionary activity status may be an appropriate framework for that testing to occur, but in our view, non-complying status would generally be the more appropriate activity status given the way the PDP has been structured.

65. Accordingly, we do not recommend acceptance of the Arcadian Triangle submission.
- 3.7. Avoidance of conflicts between water based activities and surrounding activities:**
66. Under this heading, Mr Barr referred us to a submission by Real Journeys Limited⁴⁵ seeking that a new policy be inserted into either the rural chapter or within a new water chapter to avoid surface water activities that conflicted with adjoining land uses, particularly those of key tourism activities.
67. Mr Barr referred us to the provisions of Chapter 21 bearing on the issue and to the evidence for Real Journeys heard in that hearing stream.
68. He referred, in particular, to the evidence of Real Journeys Limited emphasising the importance of the District's waterways for various purposes. In his view, it was inappropriate for the PDP to impose rules or to have a policy framework relating to the provision of water resources, this being a regional council function. More generally, Mr Barr was of the view that the breadth and location of the objectives, policies and rules for activities on the surface water are appropriate and he recommended that the additional policy sought by Real Journeys Limited should be rejected as not offering any additional value.
69. When Real Journeys Limited appeared before us, Ms Black did not give evidence on this aspect of Real Journeys' submissions. By contrast, the representative of Federated Farmers (Mr Hunt, appearing in lieu of Mr David Cooper) supported Mr Barr's recommendation, emphasising the water quality and quantity related policies in the regional plans of Otago Regional Council.
70. Hearing Panels in both Stream 1B and Stream 2 have considered the extent to which separate provision needs to be made for management of water resources and activities on the surface of the District waterways, making recommendations in that regard⁴⁶.
71. Given the absence of any evidence in support of the submission at this hearing, we do not find any need for a higher level approach across the whole of the Plan. We agree with Mr Barr's recommendation that while the Council has a role in the integrated management of land and water resources, we should properly take cognisance both of the role of and the policy framework established by Otago Regional Council for the management of water resources in relevant Regional Plans.
72. We likewise agree with Mr Barr that there is no basis for the policy sought in the Real Journey's submission.
- 3.8. Cost of Infrastructure to Council:**
73. Under this heading, Mr Barr referred us to the submission for Remarkables Park Limited⁴⁷ seeking that all references to the cost of infrastructure to Council be deleted on the basis that this is something that should be addressed under the Local Government Act 2002. Mr Barr advised us that his search of the notified text of the PDP and the provisions in the right of reply versions of each Chapter had identified only one reference to the cost of infrastructure to Council, that being in the context of notified objective 3.2.2.1.
74. The Hearing Panel for Chapter 3 has recommended⁴⁸ that the objectives of Chapter 3 be reformulated in a way that does not now refer directly to the cost of Council infrastructure.

⁴⁵ Submission 621

⁴⁶ Refer Report 3 at Section 8.8 and Report 4A at Section 3.4

⁴⁷ Submission 807

⁴⁸ Refer Report 3 at Section 2.5

We note also that the recommendations of the Stream 4 Hearing Panel considering Chapter 27 (Subdivision) have sought to emphasise that that levying of development contributions for infrastructure occurs under the Local Government Act 2002, in parallel with the operation of the PDP⁴⁹.

75. Accordingly, while we recommend this submission be accepted, we do not think any further amendment to the PDP is required to respond to it.

3.9. UCES – Plan Structure:

76. As already noted, UCES was the sole submitter that appeared before us in support of a submission seeking large scale restructuring of the PDP. UCES's submission⁵⁰ was that, with certain exceptions, the general approach and text of the ODP, particularly as it relates to activities in Rural Zones, should be retained. When Mr Haworth appeared in support of this submission, he presented a marked up version showing how, in the Society's view, the ODP and PDP should be melded together, thereby responding to the comment in Mr Barr's Section 42A Report that those submitters seeking very general relief created natural justice issues, because of the inability of others to understand the implications of what it is that they seek. The Society clearly spent considerable time on the appendix to Mr Haworth's pre-circulated evidence, but we are afraid that Mr Haworth rather missed the point Mr Barr was making. The fact that Mr Haworth appeared before us on the very last day of hearings on the text of the PDP rather tended to emphasise the fact that if the objective was to solve a natural justice problem, it would not assist potentially affected parties to learn exactly what the Society had in mind so late in the process. It needed to be clear when the Society's submission was lodged in 2015.
77. Considering UCES's submission on its merits, as Mr Haworth's submissions/evidence made clear, much of the Society's concerns turned on the role and content of the Strategic chapters of the PDP. The Stream 1B Hearing Panel has already considered the UCES argument on those points in considerable detail, concluding that suitably reframed, those Chapters form a valuable role in the structure of the PDP and should be retained⁵¹.
78. With the Stream 1B Hearing Panel having reached that conclusion, the die is effectively cast in terms of the overall structure of the PDP. As already noted, it is the existence and content of the Strategic Chapters that shifts the PDP more towards being a directive document than, as currently, the effects-based approach of the ODP.
79. In summary, Mr Haworth did not give us reason to doubt the wisdom of the recommendations of the Stream 1B Hearing Panel and if the Strategic Chapters are to remain substantially as proposed in the notified PDP, it is not consistent to approach the balance of the PDP in the overall manner in which UCES seeks.
80. That is not to say that there are not specific aspects of the PDP where the language and/or approach of the ODP might be adopted in addition to, or in substitution for, the existing text of the PDP, but such matters need to be addressed on a provision by provision basis, as they have been in previous Hearing Panel Reports.

⁴⁹ Refer Report 7 at Section 3.1

⁵⁰ Opposed by FS1090, FS1097, FS1162, FS1313 and FS1347

⁵¹ Refer Report 3 at Section 2

81. Accordingly, even if we had felt able to discount the natural justice issues Mr Barr identified, we would recommend rejection of the UCES submission on the point.
 82. Before leaving the UCES submission, we should note that Mr Haworth also presented an argument based on the provisions of the Resource Legislation Amendment Bill 2015 related to public notification of subdivision applications. Mr Haworth argued that because the effect of the Amendment Bill, once passed, would be that any subdivision classified as a controlled, restricted discretionary or discretionary activity would be considered on a non-notified basis in the absence of special circumstances, all rural subdivisions should be made non-complying in the District Plan.
 83. Mr Haworth's argument effectively repeated the argument that he had already presented in the Stream 4 (Subdivision) hearing.
 84. The Stream 4 Hearing Panel has already considered Mr Haworth's argument in the light of the Bill subsequently having been enacted⁵² and made recommendations on the point⁵³.
 85. Mr Haworth did not present any additional arguments that suggested to us that we should reconsider those recommendations.
- 3.10. Summary of Recommendations**
86. The nature of the matters canvassed in this part of our report does not lend itself to ready summary. Suffice it to say, we do not recommend any material overall changes to the PDP for the reasons set out above. Our recommendations in relation to specific submissions are summarised in Appendix 3 to this report.

⁵² As the Resource Legislation Amendment Act 2017

⁵³ Refer Report 7 at Section 7

PART C: DEFINITIONS

4. NOTES TO DEFINITIONS:

87. As notified, Chapter 2 had the following notes:
- “2.1.1 *The following applies for interpreting amendments to text:*
- ~~Strikethrough~~ means text to be removed.
 - Underline means new text to be added.
- 2.1.2 *The definitions that relate to Tangata Whenua that have been removed now sit within Chapter 5.*
- 2.1.3 *Any definition may also be amended in Stage 2 of the District Plan review.”*
88. The Stream 1 Hearing Panel queried the strikethrough/underlining in Chapter 2 as part of a more wide-ranging discussion of the staged nature of the District Plan review. The advice from counsel for the Council to that Hearing Panel⁵⁴ was that the strike through/underlining purported to show the changes from the definitions in the ODP, but this was an error and a clean version of the Chapter should have been notified. In April 2016, that correction was made, and the three notes in the notified Chapter 2 deleted, by Council pursuant to Clause 16(2).
89. Presenting the Section 42A Report on Chapter 2, Ms Leith suggested that what was the second note would merit amplification in a new note. She suggested that it read as follows:
- “Definitions are also provided within Chapter 5: Tangata Whenua (Glossary). These defined terms are to be applied across the entire Plan and supplement the definitions within this Chapter.”*
90. We have no difficulty with the concept that a cross reference might to be made to the glossary in Chapter 5. We consider, however, that both the notified note and the revised version suggested by Ms Leith mischaracterised the nature of that glossary. They are not ‘definitions’. Rather, the glossary provides English translations and explanations of Maori words and terms used in the Plan and we think, for clarity, that should be stated.
91. Accordingly, we recommend that Ms Leith’s proposed note be amended to read:
- “Chapter 5: - Tangata Whenua (Glossary) supplements the definitions within this chapter by providing English translations – explanations of Maori words and terms used in the plan.”*
92. A related point arises in relation to the QLDC corporate submission⁵⁵ requesting that all references to Maori words within Chapter 2 are deleted and that instead, reliance be placed on the Chapter 5 Glossary. In Ms Leith’s consideration of this submission⁵⁶ she observed that the notified Chapter 2 included four Maori ‘definitions’ – of the terms ‘hapū’, ‘iwi’, ‘koiwi tangata’ and ‘tino rangatiratanga’. Ms Leith observes that the term ‘iwi’ has the same definition at both the Chapter 5 Glossary and in Chapter 2. We agree that the Chapter 2 definition might therefore appropriately be deleted.

⁵⁴ Refer Counsel’s Opening Submissions in Stream 1 dated 4 March 2016 at Schedule 3.

⁵⁵ Submission 383

⁵⁶ Section 42A Report at Section 26

93. Ms Leith observed that the term ‘hapū’ is defined slightly differently between the Chapter 5 Glossary and Chapter 2. To us, if anything, this is all the more reason to delete the Chapter 2 definition in preference for the updated Chapter 5 ‘definition’ that, understandably, tangata whenua submitters will have focussed on.
94. Ms Leith’s advice was that ‘koiwi tangata’ is only found within Chapter 37 – Designations. We discuss the application of the Chapter 2 definitions to designations shortly. In summary, for the reasons below, we agree with Ms Leith’s recommendation that the defined term should be deleted.
95. Lastly, Ms Leith advised that while ‘tino rangatiratanga’ is not contained in the Glossary, the word ‘rangatiratanga’ is. Given the overlap, and that the definitions are essentially the same, we agree with Ms Leith’s recommendation that the Chapter 2 definition should be deleted.
96. The Oil Company submitters⁵⁷ sought in their submission a statement in Chapter 2 that reliance will be placed on definitions in the Act where there are such ‘definitions’ and no alternative is provided through the Plan. Ms Leith supported this submission and, in her Section 42A Report, supported inclusion of a more comprehensive note to the effect that the definitions in Chapter 2 have primacy over definitions elsewhere, that in the absence of a Chapter 2 definition, the definitions in the Act should be used, and that the ordinary dictionary meaning should apply where neither provides a definition. Mr Laurenson’s tabled statement agreed with that suggestion. We discussed with Ms Leith the desirability of referring to dictionary definitions given that while this is obviously the interpretative starting point, a dictionary will often give multiple alternative meanings or shades of meaning for the same word and different dictionaries will often have slightly different definitions for the same word. In her Reply Evidence, Ms Leith returned to this point and referred us to the approach taken in the Auckland Unitary Plan that refers one to a contextual analysis undertaken in the light of the purpose of the Act and any relevant objectives and policies in the Plan. She suggested augmenting the note at the commencement of Chapter 2 accordingly.
97. In our view, as amended, this particular note was getting further and further from the jurisdictional base provided by the Oil Companies’ submission and that it needed to be pared back rather than extended.
98. We also admit to some discomfort in seeking to circumscribe the interpretation process.
99. The starting point is to be clear what the definitions in the Chapter apply to. Ms Leith suggested a note stating that the definitions apply throughout the Plan whenever the defined term is used. We inquired of counsel for the Council as to whether we could rely on the fact that this is literally correct, that is to say that on every single occasion where a defined term is used, it is used in the sense defined. While that is obviously the intention, we observed that section 1.3 of the PDP used the term “*Council*” to refer to councils other than QLDC (the defined term). The existence of at least one exception indicates a need for some caution and we suggested that it might be prudent to use the formula typically found in legislation⁵⁸ that definitions apply “*unless the context otherwise requires*”. Ms Leith adopted that suggestion in her reply.

⁵⁷ Submission 768

⁵⁸ See e.g. Section 2(1) of the Act

100. More substantively, counsel for the Council observed in opening submissions that the defined terms in Chapter 2 did not apply to the designation chapter⁵⁹. We discussed with counsel whether there was anywhere in the notified Plan that actually said the Chapter 2 definitions did not apply to designations, and if not, why that should be the case. Initially, Counsel referred us to Section 176(2) of the Act as justifying that position⁶⁰. We thought that this was a somewhat slender basis on which to form a view as to how designations should be interpreted, but Ms Scott also observed that a number of the designations had been rolled over from the ODP (and we infer, potentially from still earlier planning documents). We agree that to the extent that defined terms have changed through successive District Plans, it cannot be assumed that the designation would use the term in the sense set out in Chapter 2 of the PDP.
101. Ms Leith amplified the point in her reply evidence drawing our attention to the limited number of cases where designations in Chapter 37 in fact refer to the definitions in Chapter 2 and the problem that where the Council is not the relevant requiring authority, any amendments to definitions used in designations would need to be referred to (and agreed by) the requiring authority.
102. Accordingly, we think that there is merit in the Staff recommendation that designations be specifically referenced as an exception, that is to say that Chapter 2 definitions apply to designations only if the designation states that. We have drawn that intended approach to the attention of the Hearing Panel considering Chapter 37 (Designations).
103. In summary, we therefore agree with the form of note suggested in Ms Leith's reply with some minor rewording as follows:
- “Unless the context otherwise requires, the definitions in this chapter apply throughout the plan whenever the defined term is used. The reverse applies to the designations in Chapter 37. The definitions in Chapter 2 only apply to designations where the relevant designation says they apply.”*
104. With that note, reference in a second note to the definitions in Chapter 2 having primacy over other definitions elsewhere is unnecessary. We think that the second note suggested by Ms Leith can accordingly be limited to state:
- “Where a term is not defined in the plan, reliance will be placed on the definition in the Act, where there is such a definition.”*
105. Ms Leith suggested to us that a third note should be added to say that where a definition includes reference to another defined term in this Chapter, this definition should be relied upon in the interpretation of the first definition. As Ms Leith explained it in her Section 42A Report⁶¹ this was intended to address the many instances of interrelated definitions. We think, however, that the note is unnecessary. If, as stated in the first note, the definitions in Chapter 2 apply throughout the Plan when a defined term is used, unless the context requires otherwise, that necessarily applies to the interpretation of Chapter 2 because it is part of the Plan.

⁵⁹ Opening submissions at paragraph 4.1

⁶⁰ Section 176(2) states that the provisions of a District Plan apply to land that is subject to a designation only to the extent that the land is used for a purpose other than the designated purpose

⁶¹ At paragraph 7.5

106. Ms Leith also suggested inclusion of a note stating that where a word or phrase is defined, the definition applies also to any variations of the word or phrase including singular for plural and vice versa.
107. We discussed with Ms Leith whether the suggested note needed to be more precise as to what was meant by “*variations*”. We read the intent as seeking to capture section 32 of the Interpretation Act 1999 – so that a definition would be read to include different parts of speech and grammatical forms - and wondered whether it should not say that more clearly. Ms Leith undertook to ponder the point and in her reply evidence, she recommended that the note she was proposing to add be simplified to refer just to singular and plural versions of words. We agree with that (Section 32 of the Interpretation Act will apply irrespective), but suggest that the wording of a note might be simplified from that suggested by Ms Leith, so it would read as follows:
- “Any defined term includes both the singular and the plural.”*
108. We discussed with counsel whether it would be helpful to identify defined terms in the text through methods such as italics, underlining or capitalisation. Ms Leith responded in her reply evidence that use of such methods can result in Plan users interpreting that the defined term is of greater importance in a provision, which is not necessarily desirable. She also noted that capitalisation can be problematic as it can be confused with terms that are capitalised because they are proper nouns. We record that Arcadian Triangle Limited⁶² suggested that greater consistency needed to be employed as regards the use of capitalisation so that either all defined terms are capitalised, or none of them are.
109. We agree with that suggestion in principle although Ms Leith suggested adding a separate list of acronyms used in the Plan to Chapter 2. We think that is helpful, but most acronyms are capitalised so that would be an exception to the general rule.
110. It follows that where terms are currently capitalised in the body of Chapter 2 (and elsewhere), they should be decapitalised unless they are proper nouns. We have made that change without further comment, wherever we noted it as being necessary, and have recommended to other Hearing Panels that they do the same.
111. We have, however, formed the view that it would be helpful to readers of the PDP if defined terms are highlighted in the text. While we accept Ms Leith’s point that the approach has its dangers, the potential for readers of the PDP not to appreciate terms are used in a sense they may not have anticipated is, we think, rather greater. The revised chapters of the PDP recommended by other Hearing Panels reflect that change, which we consider to be of no substantive effect given the ability, where necessary, to debate whether context requires a different meaning.
112. Ms Leith suggested a further note to the effect that notes included within the definitions are purely for information or guidance and do not form part of the definition. She referred us to Submission 836 as providing a jurisdictional basis for this suggested amendment. That submission (of Arcadian Triangle Limited) is limited to the notes to the definition of “*residential flat*” but we think that the submitter makes a sound general point. Elsewhere in her Section 42A Report, Ms Leith referred to some notes being fundamental to the meaning of the defined term (so that accordingly, they should be shifted into the definition). She recognised, however, that this posed something of a problem if Clause 16(2) was being relied on as the

⁶² Submission 836: Supported by FS1097

jurisdictional basis for the change (if the presence or absence of a 'note' makes a fundamental difference, it is difficult to classify their incorporation in the definition as a minor change).

113. We have approached the definitions on the basis that the Arcadian Triangle submission is correct and advice notes are solely for information purposes and cannot have substantive effect. If a definition cannot be read coherently without reference to the advice note, that suggests the definition is defective and needs work. If there is no submission to provide a basis for a substantive change to the definition, then it needs to be the subject of variation.

114. Coming back to the notes at the commencement of Chapter 2, we therefore agree with Ms Leith's recommendation that there should be a note stating:

"Any notes included within the definitions listed below are purely for information or guidance purposes only and do not form part of the definition."

115. Lastly, Ms Leith suggested a note stating:

"Where a definition title is followed by zone or specific notation, the application of the definition shall only be limited to the specific zone or scenario described."

116. She explained that this was a consequential point arising from her recommending that definitions contained within Chapter 26 (historic heritage) be shifted into Chapter 2, but remain limited in their application to Chapter 26.

117. We drew to Ms Leith's attention the fact that chapter specific definitions had also been recommended within Chapters 12 and 13. In her reply, Ms Leith accepted that the same conclusion should follow, that those definitions should be imported into Chapter 2 as a consequential change and be subject to the suggested note.

118. We agree with that suggestion and with the substance of the suggested note. We think, however, that as Ms Leith framed it, it appeared to be an instruction with substantive effect rather than a note. We therefore suggest that it be reworded as follows:

"Where a definition title is followed by a zone or specific notation, the intention is that the application of the definition is limited to the specific zone or scenario described."

119. We note that it does not necessarily follow that a copy of the relevant definitions should not also be in the Chapter to which they relate, but that is a matter for the Hearing Panels considering submissions on those chapters to determine.

120. We note also that where definitions with limited application have been shifted/copied into Chapter 2 with no substantive amendment (other than noting the limitation) we have not discussed them further.

5. GENERAL ISSUES WITH DEFINITIONS

121. There are a number of general issues that we should address at the outset of our consideration of the Chapter 2 definitions. The first arises from the fact that defined terms (and indeed some new definitions of terms), have been considered by the Hearing Panels addressing submissions on the text of the PDP.

122. We canvassed with counsel for the Council the appropriate way for us to address definitions in this category. While we have the responsibility of making recommendations on the final form on Chapter 2, our consideration of the Chapter 2 definitions should clearly be informed by the work that other Hearing Panels have undertaken on the definition of terms. We have accordingly asked each Hearing Panel to report to us on their recommendations as to new or amended definitions that should be in Chapter 2. Where we have no evidence to support a substantive change from another Hearing Panel’s recommendations, we have almost invariably adopted those recommendations. In some cases, we have recommended non-substantive grammatical or formatting changes. We do not discuss those definitions further in our Report. Similarly, where another Hearing Panel has considered submissions on a defined term (or seeking a new definition) and recommended rejection of the submission, we have not considered the matter further in the absence of further evidence.
123. Where we have had evidence on terms that have been considered in earlier hearings, we have considered that evidence, along with the reasoning of the Hearing Panel in question, and come to our own view.
124. In the specific instance where Ms Leith recommended changes to definitions that had been considered in earlier hearings, counsel for the Council identified, and we agreed, that this created a natural justice problem, because submitters heard at those earlier hearings had not had the opportunity to make submissions on the varied position of Council staff. Accordingly, as already noted⁶³, we directed that the submitters in question should have the opportunity to make written submissions to us. In the event, however, no further submissions were filed within the allotted time and thus there was no additional material to consider.
125. The second general point which we should address is the fact that as notified, Chapter 2 contained a number of definitions that were in fact just cross references to the definition contained in legislation⁶⁴. We suggested, and Ms Leith agreed, that it would be of more assistance to readers of the PDP if the actual definition were set out in Chapter 2. Having said that, there are exceptions where the definition taken from a statute is not self-contained, that is to say, it cannot be read without reference to other statutory provisions. We consider that in those circumstances, it is generally better to utilise the notified approach of just cross referencing the statutory definition. We also consider that where a definition has been incorporated from either the Act, or another Statute, that should be noted in a footnote to the definition so its source is clear. We regard inserting definitions from statutes and footnoting the source as a minor change under Clause 16(2). Accordingly, our suggested revision of Chapter 2 makes those changes with no further comment. Similarly, where we have chosen to retain a cross reference to a statutory definition, we have not commented further on the point.
126. In one case (the definition of ‘national grid’) the definition in the regulations has an internal cross reference that we consider can easily be addressed by a non-substantive amendment, as discussed below.
127. The next general point is that in her Section 42A Report, Ms Leith identified⁶⁵ that a number of definitions contained within Chapter 2 are of terms that are not in fact used within the PDP and/or which are only applicable to zones that are not included within the PDP (either because

⁶³ Refer Section 1.4 above

⁶⁴ See for example the definition of “reserve”.

⁶⁵ At paragraph 27.1

they were never part of Stage 1 of the District Plan review or because they have subsequently been withdrawn). She recommended deletion of these definitions and of any references to such zones within definitions. We agree. Given that the purpose of Chapter 2 is to define terms used in or relevant to the PDP, deletion of definitions which do not fall within this category is, by definition, a minor change within the ambit of Clause 16(2). Again, our recommended revised Chapter 2 in Appendix 1 shows such deletions without further comment⁶⁶. In some cases, terms we would have recommended be deleted on this basis are the subject of the Stage 2 Variations. In those cases, they are greyed out, rather than deleted.

128. It follows also that where submissions⁶⁷ sought new definitions, sought retention of definitions of terms not used in the PDP, or amendments to definitions that apply only in zones not the subject of the PDP, those submissions must necessarily be rejected.
129. Another general consideration relates to definitions that are currently framed in the form of rules. The definition of “*domestic livestock*” for instance is expressed in the language of a rule. It purports to state numerical limits for particular livestock in particular zones. Such definitions are unsatisfactory. Rules/standards of this kind should be in the relevant zone rules, not buried in the definitions. We will address each definition in this category on a case by case basis. Where we find that we do not have jurisdiction to correct the situation, we will make recommendations that the Council address the issue by way of variation.
130. Our next general point relates the notified definition of “*noise*” which reads as follows:
“Acoustic terms shall have the same meaning as in NZS 6801:2008 Acoustics – Measurement of environmental sound and NZS 6802:2008 Acoustics – Environmental noise.

L_{dn}:

⁶⁶ The terms deleted from Appendix 1 on this basis are:

‘Amenity Tree Planting’; ‘Amenity Vegetation; Automotive and Marine Supplier (Three Parks and Industrial B Zones)’; ‘Back Lane Site (Three Parks Zone)’; ‘Balcony’; ‘Block Plans (Tree Parks Zones)’; ‘Boundary Fencing’; ‘Building (Remarkables Park Zone)’; ‘Bus Shelters (Mount Cardrona Special Zone)’; ‘Comprehensive Residential Development’; ‘Condominiums’; ‘Development (Financial Contributions)’; ‘Design Review Board’; ‘Elderly Persons Housing Unit’; ‘Farming and Agricultural Supplier’ (Three Parks and Industrial B Zones); ‘Farm Yard Car Park’; ‘Food and Beverage Outlet (Three Parks Zone)’; ‘Front Site’; ‘Garden and Patio Supplier (Three Parks and Industrial B Zones)’; ‘Ground Level (Remarkables Park Zone)’; ‘Habitable Space (Three Parks Zone)’; ‘Hazardous Wastes’; ‘Historic Equipment’; ‘Home Occupation (Three Parks Zone)’; ‘Large Format Retail (Three Parks Zone)’; ‘Manufacturing of Hazardous Substances’; ‘Multi Unit Development’; ‘Night Time Noise Boundary Wanaka’; ‘North Three Parks Area’; ‘Office Furniture, Equipment and Systems Suppliers (Three Parks and Industrial B Zones)’; ‘On-Site Workers (Three Parks and Industrial B Zones)’; ‘Outline Development Plan’; ‘Place of Assembly’; ‘Place of Entertainment’; ‘Relocatable’; ‘Retention Mechanism’; ‘Rural Selling Place’; ‘Sandwich Board’; ‘Secondary Rear Access Lane’; ‘Secondary Unit’; ‘Secondhand Goods Outlet (Three Parks and Industrial B Zones)’; ‘Specialty Retail (Three Parks Zone)’; ‘Stakeholder Deed’; ‘Step In Plan’; ‘Storey (Three Parks Zone)’; ‘Tenancy (Three Parks Zone)’; ‘Visually Opaque Fence’; ‘Yard Based Service Activity’; ‘Yard Based Supplier (Three Parks and Industrial B Zones)’; ‘Zone Standards’

⁶⁷ E.g. submission 836: Neither supported nor opposed in FS1117

Means the day/night level, which is the A-frequency-weighted time-average sound level, in decibels (dB), over a 24-hour period obtained after the addition of 10 decibels to the sound levels measured during the night (2200 to 0700 hours).

L_{Aeq(15 min)}:

Means the A-frequency-weighted time-average sound level over 15 minutes, in decibels (dB).

L_{AFmax}:

means the maximum A-frequency-weighted fast-time-weighted sound level, in decibels (dB), recorded in a given measuring period.

Noise Limit:

Means a L_{Aeq(15 min)} or L_{AFmax} sound level in decibels that is not to be exceeded.

In assessing noise from helicopters using NZS 6807: 1994 any individual helicopter flight movement, including continuous idling occurring between an arrival and departure, shall be measured and assessed so that the sound energy that is actually received from that movement is conveyed in the Sound Exposure Level (SEL) for the movement when calculated in accordance with NZS 6801: 2008.

131. This 'definition' is unsatisfactory. Among other things, it does not actually define the term 'noise'.
132. In her reply evidence, Ms Leith noted that the reporting officer and the acoustic expert giving evidence for Council in the context of Chapter 36 – Noise had not raised any concerns with the above definition or recommended any amendments, and that there was only one submission⁶⁸ on it, seeking deletion of the day/night level (which was not supported). Accordingly, while Ms Leith recognised that the definition was somewhat anomalous, she did not recommend any change to it. Ms Leith also identified that while the definition of "sound" in Chapter 2 cross references the relevant New Zealand Standards and states that the term has the same meaning as in those standards, the Standards do not in fact define the term "sound". Again, however, Ms Leith did not recommend any amendment.
133. We disagree. The definition of "noise" is a combination of:
- A note that reference should be made to the relevant New Zealand Standards when considering acoustic terms.
 - A definition of some terms, not including 'noise'; and
 - A rule as to how particular noise (from helicopters) should be assessed.
134. In our view, the aspects of this definition that constitute a note should be shifted into the notes to Chapter 2, and be reframed as such – rather than being expressed in the language of a rule.
135. Accordingly, we suggest that the notes at the start of Chapter 2 have added to them the following:
"Acoustic terms not defined in this chapter are intended to be read with reference to NZS 6801:2008 Acoustics – Measurement of environmental sound and NZS 6802:2008 Acoustics – environmental noise".
136. The terms that are actually defined within the definition of "noise" should be set out as separate definitions of their own. The Hearing Panel on Chapter 36 did not recommend that

⁶⁸ Submission 243: Opposed by FS1224 and FS1340

Ms Brych's submission⁶⁹ be accepted and accordingly, we have no basis on which to recommend removal of the definition of Ldn.

137. Lastly, on this point, we recommend to the Chapter 36 Hearing Panel that the helicopter rule/assessment standard should be incorporated in Chapter 36.
138. The 'definition' of 'sound' should likewise be deleted, because the cross reference it contains is impossible to apply. It is therefore of no assistance as it is.
139. As another general point, we note that there is no consistency as to definition formatting. Some definitions have bullets, some have numbering systems, and where the latter, the numbering systems differ.
140. We think it is desirable, on principle, for all subparts of definitions to be numbered, to aid future reference to them. Our revised Chapter 2 therefore amends definitions with subparts to insert a consistent numbering system. We regard this as a minor non-substantive change, within Clause 16(2).
141. Lastly at a general level, we do not propose to discuss submissions seeking the retention of existing definitions if there is no suggestion, either in other submissions or by Ms Leith, that the definition should be changed.

6. DEFINITIONS OF SPECIFIC TERMS

142. We now turn to consider the content of Chapter 2 following the notes to definitions. Where suggested changes fall within the general principles set out above, we do not discuss them further. Accordingly, what follows is a discussion of those terms that were:
 - a. The subject of submissions heard in this hearing stream;
 - b. The subject of recommendations by Ms Leith; or
 - c. In a small number of cases, where we identified aspects of the definition that require further consideration.

6.1. Access

143. As notified, this definition included reference to 'common property' "*as defined in Section 2 of the Unit Titles Act 2010*". Consistent with the general approach to cross references to definitions in legislation discussed above, Ms Leith suggested deleting the reference to the Unit Titles Act and inserting the actual definition of common property from that Act. Because the end result is the same, these are non-substantive amendments within the scope of Clause 16(2).
144. We agree with Ms Leith's approach, with one minor change. We think it would be helpful to still cross reference the Unit Titles Act in the definition of 'access' but suggest the cross reference be put in brackets. As above, the proposed additional definition of 'common property' should be footnoted to source that definition to the Unit Titles Act 2010.

6.2. Access leg:

145. In the marked-up version of Chapter 2 attached to her Section 42A Report, Ms Leith suggested deletion of the initial reference in the notified definition to this relating to rear lots or rear sites. As far as we could ascertain, there is no discussion of this suggested change in the body

⁶⁹ Submission 243

of the Report and no submission which would provide jurisdiction for it. We have some concerns as to whether deletion of reference to rear lots or rear sites falls within Clause 16(2). On the face of the matter, it has the effect that the definition is broadened to apply to every site, because every site will have a strip of land included within the lot or site which provides legal physical access to the road frontage. On that basis, we do not agree with the suggested amendment. However, we think the cross reference to rear lots and rear sites might appropriately be shifted to the term defined, using the convention applied to other defined terms.

6.3. Access Lot:

146. Ms Leith recommended that this definition be deleted because the term is not used within the PDP. We discussed with her whether this might be an exception, where it was nevertheless useful to include the definition, given that the term is commonly used in subdivision applications.

147. In her reply evidence, the text⁷⁰ reiterates the position that the definition should be deleted, to be consistent with her other recommendations. However, her marked up version of Chapter 2 has a note appended to this definition saying that the definition is necessary as the term is frequently used on survey plans.

148. For our part, we think there is value in having the definition of access lot for the reason just identified. In addition, while the term ‘access lot’ is not used in the PDP, Chapter 27 refers to ‘lots for access’⁷¹.

149. Accordingly, we recommend that the notified definition of access lot be retained in Chapter 2.

6.4. Accessory Building:

150. Ms Leith recommends that the opening words to this definition, “*in relation to any site*” be deleted. Again, we could not locate any discussion of this particular amendment in the Section 42A Report but, on this occasion, we think that it falls squarely within clause 16(2) of the First Schedule – it is self-evident that the term relates to activities on a site. Having deleted the opening words, however, we think that a minor grammatical change is required where the definition refers to “*that site*” in the second line. Consequential on the suggested amendment, the reference in the second line should be to “*a site*”.

6.5. Activity Sensitive to Aircraft Noise (ASAN):

151. Ms Leith recommended two changes to this definition, both stemming from the staff recommended amendments considered in the Stream 6 hearing relating to Chapters 7-11 (Urban Residential Zones).

152. The first is to utilise the same definition for activities sensitive to road noise and the second to substitute reference to any “*education activity*” for “*educational facility*”. The latter change reflects the staff recommendation to delete the definition of ‘educational facility’. The Stream 6 Hearing Panel identifies the commonality of issues raised by the effects of aircraft and road noise in its report⁷² and we agree that it is useful to combine the two with one definition. We discuss the deletion of ‘educational facility’ later in this report, but we agree that consequential on our recommendation to delete that definition, the cross reference to it

⁷⁰ At paragraph 6.1

⁷¹ E.g. recommended Rule 27.6.2 (Report 7)

⁷² Refer Report 9A at Section 36.1

needs to be amended in this context. Accordingly, we recommend acceptance of the suggested amendments.

6.6. Activities Sensitive to Aircraft Noise (ASAN) Wanaka:

153. Ms Leith recommended deletion of this definition, consequent on a recommendation to that effect to the Stream 8 Hearing Panel considering Chapter 17 (Airport Mixed Use Zone).

154. The Stream 8 Hearing Panel concurs that this would remove duplication and aid clarity⁷³ and for our part, we heard no evidence that would suggest that we should take a different view. Accordingly, we recommend that this definition be deleted.

6.7. Adjacent and Adjoining:

155. In her Section 42A Report⁷⁴, Ms Leith drew our attention to the use of the terms ‘adjacent’ and ‘adjoining’ in the PDP. As Ms Leith observes, ‘adjoining land’ is defined as:

“In relation to subdivision, land should be deemed to be adjoining other land, notwithstanding that it is separated from the other land only by a road, railway, drain, water-race, river or stream.”

156. Ms Leith was of the view that it was desirable that this definition be expanded to apply in situations other than that of subdivision, to provide for the consistent implication of the term ‘adjoining’ between land use and subdivision consent applications. We agree that this is desirable. Chapter 27 uses the term ‘adjoining land’ in a number of places. Where necessary, it is qualified to refer to *“immediately adjoining”* lots⁷⁵. It makes sense to us that a consistent approach should be taken across subdivision and land use provisions, which are frequently combined. We also agree, however, that with no submission on the point, there is no jurisdiction to make substantive changes to this definition.

157. Accordingly, we accept Ms Leith’s suggestion that we recommend that this be considered further by Council, either at a later stage of the District Plan process or by way of District Plan variation. In the interim, we recommend that consistent with the formatting of other definitions, the limited purpose of the definition be noted in the defined term, and that it be expressed as a definition and not a rule. Appendix 1 shows the suggested changes.

158. Ms Leith considered, at the same time the use of the term ‘adjacent’ in the context of the PDP. She referred us to dictionary definitions aligning ‘adjacent’ with ‘adjoining’. She did not consider it was necessary to define the term given its natural ordinary meaning. We agree with that recommendation also.

6.8. Aircraft:

159. Ms Leith recommended that an additional sentence be inserted on the end of this definition to exclude remotely piloted aircraft weighing less than 15kg. Again, this recommendation reflects a suggested amendment considered and accepted by the Stream 8 Hearing Panel⁷⁶.

160. As with the previous definition, we heard no evidence that would cause us to take a different view. Accordingly, we recommend that the definition be amended to include the sentence:

⁷³ Refer Report 11 at Section 63.3

⁷⁴ A Leith, Section 42A Report at Section 29

⁷⁵ E.g. Recommended Rule 27.5.4

⁷⁶ Refer Report 11 at Section 63.4

“Excludes remotely piloted aircraft that weigh less than 15kg.”

6.9. Aircraft Operations:

161. As notified, this definition was expressed to include the operation of aircraft during landing, take-off and taxiing, but excluding certain specified activities. The Stream 8 Hearing Panel has considered submissions on it and recommends no change to the notified version. Ms Leith, however, recommended that the definition be converted from ‘including’ these matters to ‘meaning’ these matters. In other words, they are to be changed from being inclusive to exclusive.
162. We could not identify any specific discussion of this suggested change in the Section 42A Report. Shifting a definition from being inclusive to exclusive would normally have substantive effect and therefore fall outside Clause 16(2). However, in this case, the only conceivable activity involving aircraft not already specified is when they are in flight and section 9(5) excludes the normal operation of aircraft in flight from the control of land uses in the Act. Accordingly, we consider that this is a minor change that provides greater clarity as to the focus of the PDP. We therefore recommend that Ms Leith’s suggestion be adopted.

6.10. Air Noise Boundary:

163. Ms Leith recommended deletion of this definition consequent on a recommendation to the Stream 8 Hearing Panel considering Chapter 17. The Stream 8 Hearing Panel agreed that the definition was redundant and should be deleted⁷⁷. We heard no evidence that would cause us to take a different view.

164. Accordingly, we recommend that this definition be deleted.

6.11. Airport Activity:

165. Ms Leith recommended a series of changes to this definition consequent on changes recommended to the Stream 8 Hearing Panel considering Chapter 17, together with non-substantive formatting changes. The most significant suggested changes appear to be in the list of buildings that are included. In some respects, the ambit of the definition has been expanded (to include flight information services), but in a number of respects, the number of buildings qualifying as an airport activity have been reduced (e.g. to delete reference to associated offices). The Stream 8 Hearing Panel concurred with the suggested amendments⁷⁸ and we heard no evidence that would cause us to take a different view. In particular, although the Oil Companies⁷⁹ sought that the notified definition be retained, the tabled statement of Mr Laurenson for the submitters supported the suggested amendments. Accordingly, we recommend that the definition be amended to incorporate the changes suggested by Ms Leith and shown in Appendix 1 to this Report.

166. We should note that in Ms Leith’s section 42A Report, she recorded that the intention of the Reporting Officer on Chapter 17 was to make the now bullet pointed list of specified airport activities exclusive, rather than inclusive, by suggesting deletion of the words *“but not limited to”*⁸⁰.

⁷⁷ Refer Report 11 at Section 63.6

⁷⁸ Refer Report 11 at Section 63.8

⁷⁹ Submission 768

⁸⁰ A Leith, Section 42A Report, paragraph 30.2

167. To our mind, it is perfectly clear that a definition like that of ‘Airport activity’ which provides an initial definition and says that various specified matters are included is not intended to be exhaustive. The words “*but not limited to*” add only emphasis. They do not change the meaning. If the Council desires to alter an existing definition that is expressed inclusively, to be exclusive, in the absence of a submission on the point, that would generally be a substantive change that will need to be achieved by way of variation. The same point arises in relation to the definition of the ‘airport related activity’, which we will discuss shortly.

6.12. Airport Operator:

168. Ms Leith recommended this definition be deleted as it is not used in the PDP. Ms O’Sullivan from QAC⁸¹ noted in her tabled evidence that it was used in a designation (of Wanaka Airport Aerodrome Purposes) and suggested that it would be appropriate to retain it.

169. This raises the question addressed earlier and more generally regarding the inter-relationship between the designations in Chapter 37 and the Chapter 2 definitions. For the reasons we discussed above, we take a different view to the Stream 8 Hearing Panel (which recommended to us that the definition be retained⁸²) and find that if this term needs to be defined for the purposes of a designation, that is a matter for the Stream 7 Hearing Panel to address.

170. We therefore recommend it be deleted from Chapter 2.

6.13. Airport Related Activity:

171. Ms Leith made a series of suggested changes to this definition largely reflecting recommendations to the Stream 8 Hearing Panel. The additional changes recommended by Ms Leith are for non-substantive formatting matters. The effect of the recommended changes was to shift many of the activities formally identified as ‘airport activities’ to being ‘airport related activities’. The Stream 8 Hearing Panel concurred with the suggested changes⁸³ and, for our part, we heard no evidence to suggest we should take a different view.

6.14. All Weather Standard

172. In her Section 42A Report, Ms Leith recommended that this term be deleted on the basis that it was not used within the PDP. She reconsidered that recommendation in her reply evidence, having noted that it was used within the definition of ‘formed road’. On that basis, she recommended that the notified definition be retained. We agree, for the same reason.

6.15. Bar:

173. Ms Leith recommended a rejigging of this definition to delete the initial reference in the notified definition to any hotel or tavern, placing that reference into the term defined. We agree with the suggested reformulation, save that a minor consequential change is required so that rather than referring in the first sentence to ‘*the*’ hotel or tavern, the definition should refer to ‘*a*’ hotel or tavern.

6.16. Biodiversity Offsets:

174. This is a new definition flowing from the recommendation to the Stream 2 Hearing Panel, considering Chapter 33 – Indigenous Vegetation & Biodiversity. The Stream 2 Hearing Panel concurred with this recommendation and we heard no evidence that would cause us to take a different view. Accordingly, we recommend the definition be inserted in the form suggested by Ms Leith and shown in Appendix 1 to this Report.

⁸¹ Submission 433

⁸² Refer Report 11 at Section 63.10

⁸³ Refer Report 11 at Section 63.11

6.17. Boundary:

175. Ms Leith recommended that this definition be amended by deleting the note in the notified version referring the reader to the separate definitions of '*internal boundary*' and '*road boundary*'. Ms Leith described it in her marked up version of Chapter 2 as a non-substantive amendment. We agree with that. We agree both with that classification and consider that the note was unnecessary. We therefore recommend that the note in the notified version of this definition be deleted.

6.18. Building:

176. Ms Leith recommended that shipping containers be added as an additional exception and that reference be to residential units rather than residential accommodation in this definition, consequent on recommendations to the Stream 5 Hearing Panel considering Chapter 35 – Temporary Activities and Relocated Buildings. The second is a consequential change that we have no issue about, but the Stream 5 Hearing Panel queried the jurisdiction to insert the first, making no recommendation.

177. Although the Oil Companies⁸⁴ sought that the notified definition be retained, Mr Laurenson's tabled statement described the suggested changes as minor, and indicated agreement with Ms Leith's recommendations.

178. The notified definition includes an explicit extension of the statutory definition of 'building' to include, among other things, shipping containers used for residential purposes for more than 2 months. The clear implication is that shipping containers would not otherwise be considered a 'building'. We are not at all sure, however, that is correct. The reporting officer on Chapter 35, Ms Banks, thought they were⁸⁵ and we tend to agree with that (as a starting premise at least).

179. That would suggest to us that including an exclusion for shipping containers, irrespective of use and albeit for 2 months only, is a substantive change to the definition.

180. We are not aware of any submission having sought that exemption. Accordingly, we conclude that we have no jurisdiction to accept Ms Leith's recommendation in that regard.

181. The same problem does not arise with Ms Leith's recommendation that the introduction to the last bullet refer both to the statutory definition and the specified exemptions. We regard that as a non-substantive clarification. Ms Leith also suggests some minor grammatical changes for consistency reasons that we have no issues with.

182. Queenstown Park Ltd⁸⁶ sought in its submission that the definition excludes gondolas and associated structures. Giving evidence for the submitter, Mr Williams recorded that the effect of the definition referring to the Building Act 2004, rather than its predecessor (as the ODP had done) was to remove the ODP exclusion of cableways and gondola towers, but gave no evidence as to why this was not appropriate. Rather, because he went on to discuss and agree with the recommendation of Mr Barr to the Stream 2 Hearing Panel that 'passenger lift systems' be specifically defined, we infer that Mr Williams agreed with the analysis in Ms Leith's Section 42A Report that the submission has been addressed in a different way.

⁸⁴ Submission 768

⁸⁵ See Banks Reply Evidence in relation to Chapter 35 at 10.4

⁸⁶ Submission 806

Certainly, Mr Williams gave us no reason why we should not accept Ms Leith's recommendation in this regard.

183. Accordingly, we recommend that the only amendments to this definition be the consequential change to refer to 'residential unit' noted above, Ms Leith's suggested clarification of the role of the final bullet, and her suggested minor grammatical changes.

6.19. Building Supplier (Three Parks and Industrial B Zones):

184. Ms Leith recommended two sets of amendments to this definition. The first is to delete the reference in the term defined to the Three Parks and Industrial B Zones, arising out of a recommendation to and accepted by⁸⁷ the Stream 8 Hearing Panel considering Chapter 16-Business Mixed Use Zone. Given that the Three Parks and Industrial B Zones are not part of the PDP, were it not for inclusion of the term in Chapter 16, we would have recommended deletion of the definition. Accordingly, we agree with the suggested change.

185. The second suggested amendment is a reformatting of the definition. Currently it switches between identifying different types of building suppliers (glaziers and locksmiths), and identification of the goods a building supplier will supply. Ms Leith suggests focussing it on the latter and making appropriate consequential amendments. We agree with that suggested minor reformatting.

186. Lastly, the structure of the definition is an initial description of what a building supplier is, continuing "*and without limiting the generality of this term, includes...*". The phrase "*without limiting the generality of this term*" adds nothing other than emphasis, and in our view should be deleted.

187. Accordingly, we recommend that the revised definition of 'building supplier' should be as follows:

"Means a business primarily engaged in selling goods for consumption or use in the construction, modification, cladding, fixed decoration or outfitting of buildings includes suppliers of:

- a. glazing;*
- b. awnings and window coverings;*
- c. bathroom, toilet and sauna installations;*
- d. electrical materials and plumbing supplies;*
- e. heating, cooling and ventilation installations;*
- f. kitchen and laundry installations, excluding standalone appliances;*
- g. paint, varnish and wall coverings;*
- h. permanent floor coverings;*
- i. power tools and equipment;*
- j. locks, safes and security installations; and*
- k. timber and building materials."*

6.20. Cleanfill and Cleanfill Facility:

188. In her Section 42A Report, Ms Leith recommended that definitions of these terms be added to Chapter 2, responding to the submission of HW Richardson Group⁸⁸. The point of the submission relied on is that the definition of 'cleanfill' from Plan Change 49 should be included in the PDP. Although the submission was limited to 'cleanfill', Ms Leith identified that the

⁸⁷ Refer Report 11 at Section 49

⁸⁸ Submission 252

definition of earthworks she separately recommended be amended to align with the outcome of Plan Change 49 (accepting submission 768 in this regard) refers to both cleanfill and cleanfill facilities. She regarded addition of a definition of cleanfill facilities (from Plan Change 49) as being a consequential change. The tabled statement of Mr Laurenson for the Oil Companies⁸⁹, however, noted that the definitions of ‘cleanfill’ (and consequently ‘cleanfill facility’) could be interpreted to include a range of substances that should not be considered to fall within that term, such as contaminated soils and hazardous substances. Mr Laurenson also drew attention to Ministry for the Environment Guidelines exempting such materials from the definition of ‘cleanfill’.

189. In her reply evidence⁹⁰, Ms Leith accepted Mr Laurenson’s point. She noted that Submission 252 did not provide scope to introduce definitions of ‘cleanfill’ and ‘cleanfill facility’ reflecting the Ministry’s guidance, and recommended that the best approach was not to define those terms, thereby leaving their interpretation, when used in the definition of earthworks, at large pending review of the Earthworks Chapter of the District Plan, proposed to occur in Stage 2 of the District Plan Review process.
190. We agree with Ms Leith’s revised position, substantially for the reasons set out in her reply evidence. It follows that we recommend that Submission 252 (seeking inclusion of the definition of ‘cleanfill’ from Plan Change 49) be rejected. We note that the Stage 2 Variations propose introduction of new definitions of both ‘clean fill’ and ‘cleanfill facility’.

6.21. Clearance of Vegetation (includes indigenous vegetation):

191. Ms Leith recommended insertion of reference to “*soil disturbance including direct drilling*” in this definition, reflecting in turn, recommendations to the Stream 2 Hearing Committee considering Chapter 33 – Indigenous Vegetation and Biodiversity. That Hearing Panel accepted that recommendation, but has also recommended additional changes; to delete the reference to indigenous vegetation in brackets in the term defined and to introduce reference to oversowing⁹¹. We heard no evidence that would cause us to take a different view on any of these points. Accordingly, we recommend that the definition be amended as shown in Appendix 1 to this Report.

6.22. Community Activity:

192. Ms Leith recommended two amendments to this definition. The first is to broaden the notified reference to “*schools*” to refer to “*daycare facilities and education activities*”, reflecting recommendations to the Stream 6 Hearing Panel considering Chapter 7 – Low Density Residential Zone. We note that this suggested change was supported by the tabled evidence for the Ministry of Education of Ms McMinn⁹² and we agree with it (as did the Stream 6 Hearing Panel). The second suggested change responded to the submission of New Zealand Police⁹³ by amending the previous reference to “*Police Stations*” to refer to “*Police Purposes*”. We can readily understand the rationale for that amendment⁹⁴ although the Council may wish to consider whether reference to Fire Stations should similarly be broadened by way of variation since presumably the same logic would apply to New Zealand Fire Services Commission as to New Zealand Police.

⁸⁹ Submission 768

⁹⁰ A Leith, Reply Evidence at 20.4

⁹¹ Report 4A at Section 47.2

⁹² Submission 524

⁹³ Submission 57

⁹⁴ Refer the tabled letter/submission of Mr O’Flaherty for NZ Police emphasising the restriction on the scope of police activities otherwise.

193. Lastly, we note that in the course of the hearing, we discussed with Ms Leith the rationale for excluding recreational activities from this definition. Ms Leith frankly admitted that this was something of a puzzle. While the intention may have been to exclude commercial recreational activities, use of land and buildings for sports fields and Council owned swimming pools would clearly seem to be community activities, in the ordinary sense. We drew this point to the Council's attention in our Minute of 22 May 2017 as an aspect where a variation might be appropriate given the lack of any submission providing jurisdiction to address the point.

194. Given those jurisdictional limitations, we recommend that the definition be amended in line with Ms Leith's evidence, as shown in Appendix 1 to this Report.

6.23. Community Facility:

195. Ms Leith recommended that this definition be deleted, consequent on a recommendation to the Stream 6 Hearing Panel considering Chapter 7 – Low Density Zone. The point was also considered in the Stream 4 hearing and the Stream 4 Hearing Panel considering Chapter 27 (Subdivision) recommends that the definition be deleted.

196. The tabled evidence of Ms McMinn for the Ministry of Education queried the staff planning recommendation in relation to Chapter 7 and whether staff in that context had actually recommended the definition be deleted.

197. Be that as it may, it appeared to us that the Ministry's concern related to use of the term "community facility" in any new subzone, that will necessarily be the subject of a future plan process. It can accordingly be considered at that time.

198. Likewise, the tabled evidence of Ms McMinn for Southern District Health Board⁹⁵ drew our attention to the desirability of retaining the term 'community facility' in order that the PDP might clearly provide for Frankton Hospital at its existing location should the Community Facility Sub-Zone be reintroduced as part of Stage 2 of the District Plan review process.

199. It seems to us that, as with her concern on behalf of the Ministry of Education, this is an issue that should be addressed as part of a later stage of the District Plan review. The Council will necessarily have to consider, should it reintroduce the Community Facility Sub-Zone, what additional terms need to be defined for the proper administration of those provisions. We do not believe it is appropriate that we seek to anticipate the consequences of Council decisions that are yet to be made.

200. We therefore recommend deletion of this definition.

6.24. Community Housing:

201. Ms Leith recommended that this definition be amended by decapitalising the terms previously themselves the subject of definitions. Although she did not specifically identify this change as responding to the Arcadian Triangle submission referred to earlier, her recommendation is consistent with that submission and we agree with it. We therefore recommend a like change in the marked version of Chapter 2 annexed in Appendix 1.

⁹⁵ Submission 678

6.25. Critical Listening Environment:

202. The only change recommended by Ms Leith to this definition is correction of a typographical error pointed out in the evidence of Ms O’Sullivan for QAC⁹⁶ and also noted by the Stream 8 Hearing Panel; substitution of “listening” for “living” in the last line. We regard this as a minor change, correcting an obvious error.

6.26. Domestic Livestock:

203. The notified version of this definition read:

“Means the keeping of livestock, excluding that which is for the purpose of commercial gain:

- *In all Zones, other than the Rural General, Rural Lifestyle and Rural Residential Zones, it is limited to 5 adult poultry, and does not include adult roosters; and*

- *In the Rural General, Rural Lifestyle and Rural Residential Zones it includes any number of livestock bred, reared and/or kept on a property in a Rural Zone for family consumption, as pets, or for hobby purposes and from which no financial gain is derived, except that in the Rural Residential Zone it is limited to only one adult rooster per site.*

Note: Domestic livestock not complying with this definition shall be deemed to be commercial livestock in a farming activity as defined by the Plan.”

204. This definition needs to be read together with the definition of ‘commercial livestock’:

“Means livestock bred, reared and/or kept on a property for the purpose of commercial gain, but excludes domestic livestock.”

205. The definition of ‘farming activity’ is also relevant:

“Means the use of land or buildings for the primary purpose of the production of vegetative matters and/or commercial livestock...”

206. There were two submissions on the definition of ‘domestic livestock’. The first, that of Ms Brych⁹⁷, sought that the definition refer to the livestock rather than their keeping. The second, that of Arcadian Triangle Limited⁹⁸, made a number of points:

- a. There is an inconsistency between the two bullet points in that the second refers to livestock on a property and, per site, whereas the first bullet does not do so.
- b. The use of reference in the second bullet point variously to “a property” and “per site” is undesirable given that the second is defined, whereas the first is not.
- c. Similar controls should be imposed on adult peacocks to those in relation to adult roosters.
- d. The words in the note “as defined by the Plan” are unnecessary and should be deleted.

207. Ms Leith agreed with Ms Brych’s submission that the inconsistency of terminology as between ‘commercial livestock’ and ‘domestic livestock’ was undesirable and should be corrected.

⁹⁶ Submitter 433

⁹⁷ Submission 243: Opposed by FS1224

⁹⁸ Submission 836

208. Ms Leith also agreed with the points made in the Arcadian Triangle submission, and recommended amendments to address those issues. Ms Leith also recommended minor changes to the references to zones, to bring them into line with the PDP terminology.
209. More fundamentally, Ms Leith observed that this is one of the definitions that is framed more as a rule than as a definition. Although she did not identify all the consequential changes that would be required, her recommendation was that the operative parts of the definition (i.e. those that appear more as a rule), might appropriately be shifted into the relevant zone. In her reply evidence, Ms Leith identified that the term ‘domestic livestock’ only appears in the Rural and Gibbston Character Zones. Her view was that given the absence of any submission, that would need to be rectified by way of variation.
210. In our view, there are even more fundamental problems with this definition that largely stem from the absence of any definition as to what animals come within the concept of ‘livestock’. The Collins English Dictionary⁹⁹ defines livestock as *“cattle, horses, poultry, and similar animals kept for domestic use but not as pets – esp. on a farm or ranch”*.
211. Dictionary.com gives the following definition:
- “The horses, cattle, sheep, and other useful animals kept or raised on a farm or ranch”*.
212. Lastly, Oxford Living Dictionaries¹⁰⁰ defines ‘livestock’ as *“farm animals regarded as an asset”*.
213. These definitions suggest that the concept of ‘livestock’ on property that is not farmed is something of a contradiction in terms.
214. The subtle differences between these definitions raise more questions than they answer given the implication of the second bullet point in the notified definition that livestock includes animals kept as pets or for hobby purposes. We are left wondering whether a single horse kept for casual riding as a hobby, if held on a property not within the Rural, Rural Lifestyle or Rural Residential Zones, would be considered livestock falling outside the definition of ‘domestic livestock’, and therefore be deemed to be ‘commercial livestock’, and consequently a ‘farming activity’.
215. Or perhaps even more problematically, a household dog of which there are presumably many located within the District’s residential zones.
216. Similarly, is it material that a dog might be considered ‘useful’ or an ‘asset’ on a farm, even if it is kept as a pet within a residential zone, so that a resource consent is required for a border collie (for instance), but not a miniature poodle?
217. Ms Leith’s recommendation that peacocks be specifically referred to tends to blur the position further; peacocks would not normally (we suggest) be considered ‘farm animals’.
218. We discussed with Ms Leith whether control of poultry in residential zones, for instance, should not better be undertaken through the Council bylaw process. That would obviously be an alternative option considered in the course of any section 32 analysis. In addition, as pointed out in our 22 May 2017 Minute, the existing definition treats the Gibbston Character

⁹⁹ 1979 edition

¹⁰⁰ www.oxforddictionaries.com

Zone as a effectively a non-rural zone. Ms Leith thought that that was an error, but we lack the scope to recommend a change to the definition that would address it.

219. These considerations prompt us to the view that while, as an interim step, we should recommend the amendments suggested by Ms Leith, responding to the submissions on this definition and to the minor errors she has identified, we recommend that the Council consider regulation of animals, as a land use activity, afresh, determining with significantly greater clarity than at present, what animals it seeks to regulate through the District Plan and determining appropriate standards for the number of those animals that is appropriate for each zone in the relevant chapters of the PDP (not the definitions). Defining what is considered 'livestock' would seem to be a good starting point.

6.27. Earthworks:

220. As already noted (in the context of our discussion of 'cleanfill' and 'cleanfill facility' Ms Leith recommended amending the definition of earthworks to adopt the definition established through Plan Change 49, thereby responding to the submission of the Oil Companies¹⁰¹. Ms Leith's recommendation has been overtaken by the Stage 2 Variations which propose amendments to this definition and thus we need not consider it further.

6.28. Earthworks within the National Grid Yard:

221. In her Reply Evidence¹⁰², Ms Leith noted the tabled representation of Ms Bould reiterating the evidence on behalf of Transpower New Zealand Limited¹⁰³ seeking a new definition of 'earthworks within the national grid yard'. This submission and evidence was considered by the Stream 5 Hearing Panel which has determined that no new definition is required for the purposes of the implementation of Chapter 30¹⁰⁴.

222. Ms Bould raised the point that the definition of 'earthworks' does not capture earthworks associated with tree planting. However, Ms Leith observed that the recommended rules in Chapter 30 specifically exclude such earthworks and so the recommended new definition would not provide the desired relief, and would in fact be inconsistent with the rules recommended in Chapter 30. We note also the Stream 5 Hearing Panel's conclusion¹⁰⁵ that the recommended rules were essentially as proposed by Transpower's planning witness. Accordingly, we do not accept the need for the suggested definition.

6.29. Ecosystem Services:

223. Ms Leith recorded that there were two submissions on this definition, one from the Council in its corporate capacity¹⁰⁶, and the other from Ms Brych¹⁰⁷.
224. The Council's submission sought substantive changes to the definition, adopting a definition provided by Landcare Research.
225. Ms Brych sought that the definition should be re-written to cover more than just the services that people benefit from.

¹⁰¹ Submission 768

¹⁰² A Leith, Reply at 22.1

¹⁰³ Submission 805

¹⁰⁴ Refer Report 8, Section 5.15

¹⁰⁵ Ibid

¹⁰⁶ Submission 383

¹⁰⁷ Submission 243

226. Ms Leith observed that the notified definition is practically identical to the definition in the Proposed RPS which is now beyond appeal in this respect. While, as a matter of law, we are not required to give effect to the proposed RPS, there appears no utility in contemplating amendments to take this definition to a position where it is inconsistent the definition we now know will form part of the future operative Regional Policy Statement.
227. As regards Ms Brych’s submission, Ms Leith provided additional commentary in her reply evidence to the effect that while a wide range of flora and fauna benefit from ecosystem services, that term is usually identified in the PDP alongside ‘nature conservation values’, ‘indigenous biodiversity’ and ‘indigenous fauna habitat’. She was of the view, and we agree, that the PDP therefore already addresses those other attributes in another way. Ms Brych did not appear to support her submission, or to explain why we should accept it in preference to adopting the Proposed RPS definition.
228. Accordingly, we recommend acceptance of Ms Leith’s revised definition which varies from the notified version only by way of the minor wording and formatting changes shown in Appendix 1.

6.30. Educational Facilities:

229. Ms Leith recommended deletion of this definition and substitution of a new definition for ‘education activity’, reflecting an officer recommendation we now know the Stream 6 Hearing Panel has accepted. Ms Leith also recommended a minor grammatical amendment to the definition of education activity. We heard no evidence that would suggest that we should not accept these recommendations¹⁰⁸ or take a different view. Accordingly, we recommend deletion of the definition of ‘education facility’ and insertion of the suggested definition of ‘education activity’.

6.31. Electricity Distribution Corridor and Electricity Distribution Lines:

230. Ms Leith recommended two new definitions, consequent on recommendations to the Stream 5 hearing committee considering Chapter 30 – Energy and Utilities. The Stream 5 Hearing Panel has not recommended insertion of these definitions and accordingly, we do not accept Ms Leith’s recommendation either.
231. We note, however, that the Stream 5 Hearing Panel recommends a new definition of ‘electricity distribution’, responding to a submission of Aurora Energy¹⁰⁹, and intended to include those electricity lines that do not form part of the National Grid, reading as follows:

“Means the conveyance of electricity via electricity distribution lines, cables, support structures, substations, transformers, switching stations, kiosks, cabinets and ancillary buildings and structures, including communication equipment, by a network utility operator.”

232. We heard no evidence to cause us to take a different view, accordingly, we recommend inclusion of the suggested new definition¹¹⁰.

6.32. Energy Activities:

233. Ms Leith recommended a definition of this term be inserted consequent on recommendations to the Stream 5 Hearing Panel considering Chapter 30. That Hearing Panel recommends that the suggested definition be varied to delete the initial reference to the generation of energy

¹⁰⁸ Ms McMinn supported that recommendation in her evidence for Ministry of Education

¹⁰⁹ Submission 635

¹¹⁰ Refer Report 8 at Section 6.6

and to make it exclusive, rather than inclusive. We adopt the recommendation of the Stream 5 Hearing Panel¹¹¹ with the minor change recommended by Ms Leith – decapitalising the bullet pointed terms.

6.33. Environmental Compensation:

234. Ms Leith recommended a new definition of this term, consequent on a recommendation to the Stream 2 Hearing Panel considering Chapter 33 – Indigenous Vegetation & Biodiversity. The Stream 2 Hearing Panel accepted the suggested new definition¹¹² and we heard no evidence to cause us to disagree.

6.34. Exotic:

235. Initially, Ms Leith recommended only a minor formatting change to this definition in her section 42A Report (consistent with the recommendations of the Stream 5 Hearing Panel that considered submissions on the term). We discussed with her, however, what the reference in the suggested definition to species indigenous “to that part of the New Zealand” means.

236. Putting aside the typographical error, which part?

237. In her reply evidence Ms Leith suggested that the definition should be clarified to refer to species not indigenous to the District. Having reflected on the point, we admit to some discomfort with the suggested revision of the definition because we consider it has potentially significant effect given the implication that what is exotic is (by definition) not indigenous. We have not previously seen a definition of indigenous flora and fauna that was more specific than New Zealand as a whole. We also wonder whether it is practical to determine whether species are indigenous to Queenstown-Lakes District, or whether they might have been imported from other parts of New Zealand, potentially as far away as Cromwell or Tarras, and indeed, whether that should matter.

238. Adopting a narrower definition than one relating to New Zealand as a whole is also, in our view, potentially inconsistent with section 6(c) of the Act. Both the Operative and the Proposed RPS likewise define “*indigenous*” as relating to New Zealand as a whole.

239. Last but not least, the definition of ‘indigenous vegetation’ in Chapter 2 similarly takes a New Zealand wide focus. We cannot understand how vegetation could be both exotic and indigenous for the purposes of the PDP.

240. This reasoning suggests to us that we should leave well-enough alone.

241. Accordingly, the only amendments we recommend to this definition are to adopt the formatting change Ms Leith recommended (shifting reference to trees and plants into the defined term) and to correct the typographical error in the second line, deleting the word “*the*”.

6.35. External Appearance:

242. Ms Leith recommended a reformatting change to this definition, shifting reference to buildings into the defined term. We consider this is a minor change that aids understanding and we support that recommendation.

¹¹¹ Among other things, suggesting that energy might be generated contradicts the first law of thermodynamics

¹¹² Refer Report 4A, Section 51.2

6.36. Factory Farming:

243. Ms Leith recommended that this definition be amended so that rather than including the three bullet pointed matters it should “mean” those three matters i.e. converting the definition from being inclusive to exclusive. In her Section 42A Report, Ms Leith explained that the definition is unclear whether the list is intended to be exhaustive or not. She recommended that this be made clear¹¹³.

244. As far as we can establish, there is no submission seeking this change. Rather the contrary, the submissions of Federated Farmers of New Zealand¹¹⁴ and Transpower New Zealand¹¹⁵ both sought that the existing definition be retained. Those submissions were before the Stream 2 Hearing Panel that does not recommend any change to the existing definition.

245. Ms Leith did not explain the basis on which she determined that the definition of ‘factory farming’ was intended to be exclusive and it is not obvious to us that that is the intention. Accordingly, we regard this as a substantive change falling outside Clause 16(2) and we do not accept it. We therefore recommend that the definition remain as notified, other than by way of the minor grammatical change suggested by Ms Leith (decapitalising the first word in each of the bullet points).

6.37. Farm Building:

246. Ms Leith recommended a minor grammatical change to this definition (shifting the location of the word “excludes”). We agree that the definition reads more easily with the suggested change and we recommend that it be amended accordingly.

6.38. Flat Site:

247. Ms Leith recommended that a definition for this term be inserted, consequent on a recommendation to the Stream 6 Hearing Panel that has the effect that the definition of ‘flat site’ previously found in notes to rules in Chapters 7, 8 and 9 is converted to a definition in Chapter 2¹¹⁶. The Stream 6 Hearing Panel accepts the desirability of distinguishing between flat and sloping sites¹¹⁷. Ms Leith also suggested a minor grammatical change that we believe improves the definition. We heard no evidence seeking to contradict Ms Leith’s recommendation. Accordingly, we recommend that the slightly varied definition Ms Leith also suggested be inserted, as shown in Appendix 1 to this Report.

6.39. Floor Area Ratio:

248. Ms Leith recommended deletion of this definition consequent on a recommendation to the Stream 6 Hearing Panel. The Stream 6 Hearing Panel accepted that recommendation¹¹⁸ and we had no reason to take a different view.

6.40. Formed Road:

249. Federated Farmers¹¹⁹ sought that this definition be amended to distinguish between publicly and privately owned roads in the District.

¹¹³ Refer Section 42A Report at 30.4

¹¹⁴ Submission 600: Supported in FS1209 and FS1342; Opposed in FS1034

¹¹⁵ Submission 805

¹¹⁶ Refer Report 9A, Section 37.1

¹¹⁷ Refer the discussion in Report 9A at Section 37.1

¹¹⁸ Report 9A at Section 36.8

¹¹⁹ Submission 600: Supported in FS1209; Opposed in FS1034 and FS1040

250. Ms Leith referred us to the definition of ‘road’ which, in her view, means that a ‘formed road’ must necessarily be a formed public road. When Federated Farmers appeared before us, its representative accepted Ms Leith’s analysis, as do we. Accordingly, we recommend that the submission be rejected.

6.41. Ground Level:

251. As notified, this definition had the effect that where historic ground levels have been altered by earthworks carried out as part of a subdivision under either the Local Government Act 1974 or the Act, ground level is determined by a reference to the position following that subdivision, but otherwise, any historic changes in actual ground level do not affect the ground level for the purposes of the application of the PDP.

252. This position was the subject of two submissions. Nigel Sadlier¹²⁰ sought that the definition be retained as proposed. We note in passing that that submission was itself the subject of a further submission¹²¹ seeking to alter the definition. The Stream 1B Hearing Panel discussed the permissible scope of further submissions in Report 3. We refer to and rely on the reasoning in that report¹²², concluding, therefore, that this is not a valid further submission that we can entertain.

253. The second submission of this definition is that of Arcadian Triangle Limited¹²³. This submission focussed on the third bullet point of this definition which, as notified, read as follows:

“Earthworks carried out as a part of a subdivision” does not include earthworks that are authorised under any land use consent for earthworks, separate from earthworks approved as part of a subdivision consent.”

254. The submission makes the point that for a period prior to Plan Change 49 becoming operative on 29 April 2016, the Council routinely required subdividers to obtain land use consent for earthworks associated with their subdivision (following a policy decision to this effect). This bullet point accordingly had the potential to alter ground levels for future purposes where they have been changed as a result of earthworks that were actually associated with subdivision. The submitter sought that the bullet point apply to the position after 29 April 2016. Ms Leith agreed with the point made by the submitter and recommended that the relief sought be granted.

255. Ms Leith also recommended (as minor changes) that three of the notified notes to this definition should be relocated into the definition itself, and that a statement at the end of the notified definition that it did not apply to the Remarkables Park Zone or the Industrial B Zone should be deleted.

256. We agree with Ms Leith’s recommendations, as far as they go but we have a fundamental problem with the definition insofar as it requires an inquiry as to what the ground level was prior to earthworks being carried out “*at any time in the past*”. We discussed with Ms Leith the futility, for instance, of seeking to establish what changes gold miners operating in the 1860s made to the pre-existing ground level and whether it would be more practical to

¹²⁰ Submission 68

¹²¹ Of Erna Spijkerbosch – FS1059

¹²² Report 3 at Section 1.7

¹²³ Submission 836

nominate a specific date before which any changes to the pre-existing ground level could be ignored.

257. Ms Leith provided us with further information in her evidence in reply. Apparently, the original definition of ‘ground level’ in the ODP nominated the date of the ODP’s public notification as just such a reference point but this posed problems because establishing ground level at that date (10 October 1995) was found to be difficult and in some cases impossible. Plan Change 11B was promulgated to address the issue and the notified definition in the PDP reflects the resolution of appeals through the Environment Court. Given that the current definition appeared to be the combination of much previous assessment and consideration, she did not recommend any additional amendments to it.
258. Ms Leith did not refer us to an Environment Court decision settling appeals on Plan Change 11B and we could not locate one ourselves. We infer that the resolution of appeals may have been by way of consent order.
259. Be that as it may, and with due respect to the Court, it appears to us to be illogical to address a problem caused by the inability to establish ground levels at a date in 1995, by putting in place a regime requiring knowledge of ground levels at all times in the past, that is to say tens if not hundreds of years before 1995.
260. The obvious solution, it seems to us, is to nominate a reference point when there was adequate knowledge of ground levels across the District, possibly in conjunction with provision for an earlier date if public records provide adequate certainty as to the historic ground level. For this reason, the Chair included this definition as one of the points recommended for variation in his 22 May 2017 Minute.
261. In the meantime, however, we have no jurisdiction to recommend a material change to the definition of ‘ground level’ from that recommended by Ms Leith. Appendix 1 therefore reflects those changes only.
- 6.42. Hanger:**
262. Ms Leith recommended a change to this definition (to insert the word “means”) consequent on a recommendation to the Stream 8 Hearing Panel considering Chapter 17 – Airport Zone. The Stream 8 Hearing Panel concurred¹²⁴ and we had no basis to take a different view.
- 6.43. Hazardous Substance**
263. This definition was the subject of a submission from the Oil Companies¹²⁵ supporting the existing definition. Ms Leith recommended only minor formatting changes that do not make any difference to the meaning of a definition. We accept her recommendations in that regard. The relevant changes are as shown in Appendix 1 to this report.
- 6.44. Height:**
264. Ms Leith recommended a minor formatting change to this definition and deletion of reference to assessment of height in the Three Parks Zone, recognising that that zone is not part of the PDP. We agree with Ms Leith’s suggestions on both points and the revised definition in Appendix 1 to this Report shows the relevant changes.

¹²⁴ Refer Report 11 at Section 63.1

¹²⁵ Submission 768

- 6.45. Heritage Landscape:**
 265. We recommend deletion of this definition, consequent on the recommendation of the Stream 3 Hearing Panel concerning Chapter 26 – Historic Heritage that this term not be used in Chapter 26¹²⁶.
- 6.46. Home Occupation:**
 266. Ms Leith recommended an amendment to this definition to delete the final sentence, stating the position applying in the Three Park Zone, given that that Zone is not part of the PDP. We agree with that recommendation for the reasons set out above.
- 6.47. Hotel:**
 267. This definition was the subject of a submission¹²⁷ pointing out that there appeared to be a word missing. Ms Leith accepted the point and recommended a minor change to correct the error, together with minor reformatting changes. We accept Ms Leith’s suggestions and the revised version of the definition in Appendix 1 shows the relevant changes.
- 6.48. Indigenous Vegetation:**
 268. Ms Leith recommended a change to this definition consequent on a recommendation to the Stream 2 Hearing Panel considering Chapter 33 – Indigenous Vegetation & Biodiversity. The Stream 2 Hearing Panel agreed with that recommendation (to refer to vascular and non-vascular plants) and we had no evidence to suggest that we should take a different view.
- 6.49. Indoor Design Sound Level:**
 269. In Appendix 1, we have corrected the reference to L_{dn} , to reflect the defined term.
- 6.50. Informal Airport:**
 270. Ms Leith recommended a minor non-substantive change to the note to this definition.
 271. We agree that her suggested change shown in Appendix 1 to this Report provides greater clarity and recommend it accordingly.
- 6.51. Internal Boundary:**
 272. Ms Leith recommended that the note referring the reader to other definitions is unnecessary. We agree and recommend that it be deleted.
- 6.52. Kitchen Facility:**
 273. Ms Brych¹²⁸ suggested in her submission that this definition is not very clear but did not identify either the particular problem with it, or how it might be amended to address any issue. Ms Leith was unsure as to what was not clear, as were we. Accordingly, we do not recommend any change to the definition.
- 6.53. Landside:**
 274. Ms Leith recommended a minor change consequent on a recommendation to the Stream 8 Hearing Panel considering Chapter 17- Airport Zone. That Panel agreed and we have no basis to disagree with the suggested revision shown in Appendix 1 to this Report.

¹²⁶ Refer Report 5 at Section 3

¹²⁷ Christine Brych – Submission 243; Opposed by FS1224

¹²⁸ Submission 243; Opposed by FS1224

6.54. Liquor:

275. Consistent with the general approach we suggested to her, Ms Leith recommended that this definition set out in full the defined term rather than cross referencing the definition in the Sale and Supply of Alcohol Act 2012. However, on this occasion, the definition is so detailed that we think the cross reference to the legislation from which it is taken is appropriate.

276. Accordingly, we recommend that the notified definition be retained.

6.55. Lot:

277. Ms Leith recommended a minor formatting change (to shift the reference to subdivision into the defined term). We agree that this is clearer and recommend the amendment shown in Appendix 1 to this Report.

6.56. Low Income:

278. Ms Leith recommended minor formatting changes to remove unnecessary capitals in this definition. We agree and Appendix 1 shows the relevant changes.

6.57. MASL:

279. Ms Leith recommended that this definition be shifted to the separate section she recommended containing acronyms used in the PDP. While, as defined, it is indeed an acronym (standing for metres above sea level), reference to it raises a more substantive issue.

280. Given the continuous and ongoing rise in sea levels, use of the literal meaning of MASL as a fundamental reference point in the PDP is unsatisfactory. The Chair's 22 May 2017 memorandum recommended that Council promulgate a variation to define sea level as 100 metres above Otago Datum in order to provide a reference point that will not shift over time. We have no scope to make that change ourselves in the absence of any submission, but anticipating a possible variation, we recommend in the interim that 'MASL' remain in the first section of Chapter 2, rather than being shifted into a separate section of acronyms.

6.58. Mast:

281. In her tabled evidence for QAC, Ms O'Sullivan drew our attention to a potential issue with the definitions of 'mast' and 'antenna', because both of those terms are framed as being specific to telecommunications. Ms O'Sullivan's concern was that the rules in Chapter 30 governing installation of masts and antenna would not, therefore, address structures used for radio communications, navigation or metrological activities – all matters of obvious importance to QAC.

282. Ms O'Sullivan accepted that QAC had not filled a submission with respect to these definitions but drew our attention to the issue in case we could identify scope to address the point.

283. Ms Leith's initial view was that there was no scope to broaden the definitions. We canvassed various possible options in discussions with Ms Leith, but she remained of the view that there was no scope through submissions to recommend these changes.

284. We think that Ms O'Sullivan's concern might be slightly overstated because the ordinary natural meaning of telecommunications includes communications by way of radio waves and to the extent that navigation and metrological facilities on masts and antenna communicate data, they might similarly be considered to fall within the existing definitions. To the extent that this is not the case, however, we have insufficient evidence to conclude that broadening

the definitions to provide more clearly for these facilities would be a minor change for the purposes of Clause 16(2). Accordingly, we conclude that this is a matter which should be addressed by the Council by a way of variation, as Ms Leith recommended to us.

6.59. Mineral Exploration:

285. Ms Leith recommended a new definition for this term consequent on recommendations to the Stream 2 Hearing Panel considering Chapter 21 – Rural Zone

286. The Stream 2 Hearing Panel agreed with that recommendation. Ms Leith, however, suggested two changes to the definition considered by the Stream 2 Hearing Panel. The first is non-substantive in nature (deleting “any” in the third line). The second, however, is more problematic, in our view. The definition recommended to, and accepted by the Stream 2 Hearing Panel had the concluding words “*and to explore has a corresponding meaning*”. Ms Leith suggested that this be deleted on the basis that the definition relates to exploration. While this is correct, the extra words provide for a change of grammatical form (from a noun to a verb) and make it clear that the definition applies to both. We think for our part that that is helpful and we disagree with Ms Leith’s recommendation in that regard. Appendix 1, accordingly, only shows the minor change noted above from the version recommended by the Stream 2 Hearing Panel.

6.60. Mineral Prospecting:

287. Ms Leith recommended a new definition of this term be inserted consequent on a recommendation to the Stream 2 Hearing Panel considering Chapter 21 – Rural Zone. That Hearing Panel concurred. Ms Leith has suggested only a minor grammatical change (decapitalising the initial word in each bullet point). We had no evidence to suggest substantive changes to the definition from that recommended by the Stream 2 Hearing Panel, but we agree that the minor grammatical change suggested by Ms Leith is appropriate. Appendix 1 to this Report shows the revised definition.¹²⁹

288. As a consequential change, the existing definition of ‘prospecting’ should be deleted.

289. Before leaving this term, however, we should note the concern expressed by the Stream 2 Hearing Panel that the way the definition is expressed (being inclusive rather than exclusive) does not accord with the apparent intent – that it describe a low impact activity. The Panel suggested that Council needed to revise it in a future variation. We concur.

6.61. Mini and Micro Hydro Electricity Generation:

290. Ms Leith recommended a minor amendment to insert the word “*means*” at the start of the defined term. The suggested amendment does not alter the meaning, but is consistent with how other defined terms are framed. We accordingly recommend that change.

6.62. Mining Activity:

291. Ms Leith recommended a substantive change to this definition consequent on a recommendation to the Stream 2 Hearing Panel, considering Chapter 21 – Rural Zone, subject only to minor reformatting changes. This recommendation has been overtaken by the Stage 2 Variations, which propose amendments to the notified definition and thus we need not consider it further, although we note that a new definition of ‘mining’ has been inserted into our recommended revised Chapter 2 consequent on the recommendation of the Stream 2 Hearing Panel.

¹²⁹ Report 4A at Section 4.12

6.63. Minor Alterations and Additions to a Building:

292. Ms Leith suggested amendments to this definition consequent on recommendations to the Stream 6 Hearing Panel considering Chapter 10 – Arrowtown Residential Historic Management Zone and accepted by that Hearing Panel¹³⁰. We had no basis to take a different position. The defined term is, however, specific to Chapter 10, and so it needs to be noted as such. Accordingly, Appendix 1 to this Report shows the relevant changes.

6.64. Minor Upgrading:

293. Ms Leith recommended a series of changes to this definition consequent on recommendations to the Stream 5 Hearing Panel considering Chapter 30 – Energy and Utilities. The Stream 5 Hearing Panel largely accepts that recommendation (changing only the tense of the introduction of the specified items: “shall include” to “includes”). Ms Leith adopted that recommendation subject only to minor formatting changes. Ms Bould’s tabled statement for Transpower New Zealand Limited¹³¹ drew our attention to the evidence of Ms McLeod for Transpower in the context of the Stream 5 hearing seeking provision in the definition for a 15% increase to the height of support structures. Although not apparent from Ms Bould’s statement, the relief supported by Ms McLeod suggests that the proposed increase could only occur when necessary to comply with NZECP 34:2001, and so is more limited than would appear to be the case.

294. Be that as it may, Ms Bould provided us with no additional evidence not already put before the Stream 5 Hearing Panel. In addition, Ms Leith drew our attention to the difficulty in judging compliance with such a permitted activity condition and to the potential for significant increases to the height of support structures incurring incrementally over time as permitted activities¹³².

295. We are unsure whether the second point is a valid concern given that the relief supported by Ms McLeod is limited to extensions necessary to provide clearance under the NZECP, but ultimately, we have no basis on which to form a different view to the Stream 5 Hearing Committee.

296. Ms Irving drew our attention to the evidence for Aurora Energy¹³³ in the Stream 5 Hearing in her tabled memorandum, but provided no additional evidence or argument to cause as to doubt the conclusions of the Stream 5 Hearing Panel. Accordingly, we do not recommend that the definition be extended further from that recommended by the Stream 5 Hearing Panel, other than to make it clear that it is limited in application to Chapter 30.

297. We also heard evidence from Ms Black for Real Journeys Limited¹³⁴, who sought an expansion of the definition to provide for upgrades to infrastructure other than electricity transmission. The particular point of concern to Ms Black was the need to provide from time to time for upgrades to wharves. After the conclusion of the hearing, Ms Black provided us with suggested wording for a revised definition (2 options).

¹³⁰ Report 9A at Section 36.10

¹³¹ Submission 805

¹³² Refer Leith reply evidence at 21.2

¹³³ Submission 635: Supported in part in FS1301; Opposed in FS1132

¹³⁴ Submission 621

298. Ms Leith did not support the suggested amendment of the ‘minor upgrading’ definition¹³⁵. Ms Leith observed that the requested relief went beyond a change to the definition and would require new rules which have not been recommended in the Stream 5 Hearing Report. In our view, there would be no point providing an amended definition if the term is not used in the context of an upgrade other than electricity infrastructure.
299. In addition, we have a concern that upgrades of wharves located in sensitive rural areas such as at Walter Peak, might have significant adverse effects.
300. Last but not least, Real Journeys Limited did not seek an amendment to this definition in its submission and we could not identify any jurisdiction for the relief now sought.
301. Accordingly, our revised version of the definition in Appendix 1 is limited to the amendments referred to above.

6.65. Moderate Income:

302. Ms Leith recommended minor amendments (decapitalising words) in this definition that we agree are desirable for consistency reasons. Appendix 1 shows the suggested amendments.

6.66. National Grid:

303. Ms Leith recommended a new definition of this term, arising out of the Stream 5 Hearing in relation to Chapter 30 – Energy and Utilities. The recommended definition in that hearing suggested a cross reference to the Resource Management (National Environmental Standards for Electricity) Transmission Activities Regulations 2009 which define what the National Grid is. The Stream 5 Hearing Panel accepted the desirability of having a definition in the terms recommended, but consistent with the general approach for such cross references, Ms Leith suggested reproducing what the regulations actually say. While we agree that this is more user-friendly, the definition in the Regulations refers to the ownership of the National Grid as at the commencement of the regulations which, if retained, defeats the intention of making the Chapter 2 definition self-contained. We recommend replacing that with a cross reference to notification of the PDP. Given that Transpower has owned the National Grid at all material times, this change falls within Clause 16(2).

6.67. National Grid Corridor:

304. Ms Leith recommended deletion of this definition and its replacement by a new term (National Grid Subdivision Corridor) consequential on recommendations to the Stream 5 Hearing Panel considering Chapter 30 – Energy and Utilities. The new term is proposed to have the same definition save for a minor non-substantive amendment to the note, and a grammatical change in the second line (delete the word “*the*”).
305. The description of the area either side of national grid lines was the subject of discussion in both the Stream 4 and Stream 5 hearings. The recommendations from those Hearing Panels are that the term used in the relevant rules should be ‘National Grid Corridor’, that is to say, the notified defined term. Accordingly, we reject Ms Leith’s recommendation in that regard. In addition, we think it is unnecessary to state (in the same note) that the term does not include underground lines – the opening words of the definition make it perfectly clear that it only relates to above ground lines. However, the amendment she suggested to what was formerly the note aids understanding of the inter-relationship between the defined term and any lines that are designated and so we recommend that ‘National Grid Corridor’ be amended as shown in Appendix 1.

¹³⁵ Refer A Leith, Reply at 21.3

6.68. National Grid Sensitive Activities:

306. Ms Leith recommended a revised definition for this term, reflecting recommendations to the Stream 5 Hearing Committee considering Chapter 30 – Energy and Utilities, subject to minor grammatical changes (removing capitalisation of initial words in bullets and a surplus “*the*”). The Stream 5 Hearing Panel agreed with the recommendation. We heard no evidence to suggest that we should take a different view other than a consequential change to reflect our recommendation above to delete the definition of “education facility” and in relation to Ms Leith’s suggested minor additional changes. Accordingly, we recommend the revised definition in the form set out in Appendix 1.

6.69. National Grid Yard:

307. Ms Leith recommended an amendment to this definition (to replace the diagram), reflecting a recommendation to the Stream 5 Hearing Panel, together with a minor non-substantive change to the former note to the definition. The Stream 5 Hearing Panel accepted the recommendation to amend the diagram and we heard no evidence to suggest that we should take a different view. As regards the note, we consider that as with the definition of ‘national grid corridor’, it is preferable that the body of the definition makes clear that it relates to overhead lines, rather than that being stated in a note.

308. Accordingly, we recommend that amended definition set out in Appendix 1.

6.70. Nature Conservation Values:

309. Ms Leith recommended a revised definition for this term, reflecting a recommendation to the Stream 1B Hearing considering Chapter 3 – Strategic Direction. The Report of the Stream 1B Panel recommends a slightly different definition which refers at the end to habitats rather than landscapes and inserts reference to ecosystem services as an aspect of natural ecosystems, but otherwise accepts the staff recommendation. The only submission on this term listed for hearing in Stream 10 was that of X-Ray Trust Limited¹³⁶, which sought a definition of the term, but did not suggest how it should be worded. Accordingly, we have no basis on which to disagree with the Stream 1B Hearing Panel and recommend a revised definition in the terms set out in Appendix 1.

6.71. Navigation Facility:

310. The Airways Corporation of New Zealand Limited¹³⁷ sought a new definition for this term. Wording was provided in the submission.

311. Ms Leith’s Section 42A Report however identifies that as a result of recommended amendments, the term is no longer used in Chapter 30. Accordingly, in her view, there is no utility in inserting a definition for it¹³⁸. While that is correct, we note that the Stream 1B Hearing Panel has recommended the definition of ‘regionally significant infrastructure’ that refers, among other things, to ‘navigation infrastructure’ associated with Queenstown and Wanaka Airports. It appears to us that, therefore, there is value in defining that term.

312. The definition suggested in the Airways Corporation submission for ‘navigation facility’ was:

“Means any permanent or temporary device or structure constructed and operated for the purpose of facilitating navigation by aircraft or shipping.”

¹³⁶ Submission 356

¹³⁷ Submission 566: Supported by FS1106, FS1208, FS1253 and FS1340

¹³⁸ Refer Section 42A Report at 14.5

313. While as a matter of fact, navigation infrastructure includes shipping (e.g. at the entrance to Queenstown Bay), the reference to shipping is unnecessary given the context in which the term is used in the PDP, but otherwise we think that the suggested definition is perfectly serviceable. Accordingly, we recommend the submission be accepted in part by inclusion of a new term ‘navigation infrastructure’ defined as:

“Means any permanent or temporary device or structure constructed and operated for the purpose of facilitating navigation by aircraft.”

6.72. Net Area:

314. Ms Leith recommended a formatting change to this definition to shift the reference to sites or lots into the defined term, consistent with the approach to other terms in Chapter 2. This is a minor non-substantive change, but we agree that with some simplification, it improves readability. Accordingly, we recommend revision of the term as shown in Appendix 1.

6.73. Net Floor Area:

315. Ms Leith recommended a minor wording change to substitute “*means*” for “*shall be*” at the start of this definition. The end result is the same so it falls within Clause 16(2). We agree with the suggested change, which makes the definition consistent with other terms in Chapter 2.

6.74. Noise Event:

316. Ms Leith recommended correction of a typographical error in the fourth line of this definition that was also noted by the Stream 5 Hearing Panel. We agree that this is a minor error that should be corrected under Clause 16(2).

6.75. No Net Loss:

317. Ms Leith recommended a new definition for this term, reflecting a recommendation to the Stream 2 Hearing Panel considering Chapter 33 – Indigenous Vegetation & Biodiversity. The Stream 2 Hearing Panel accepted that recommendation and we heard no evidence which would provide us with a basis to take a different view. Accordingly, we recommend a new definition in the terms set out in Appendix 1.

6.76. Notional Boundary:

318. Ms Leith recommended amendment to this definition, reflecting a change recommended to the Stream 5 Hearing Panel considering Chapter 36 – Noise (to refer to “*any side*” of a residential unit rather than to “*the facade*”) together with a minor grammatical change (“*any*” to “*a*”). The Stream 5 Hearing Panel agreed with the staff recommendation and we heard no evidence that would give us a basis to take a different view. We also agree that the minor additional change suggested by Ms Leith aids readability. Accordingly, we recommend a revised definition in the terms set out in Appendix 1.

6.77. Outer Control Boundary (OCB) Queenstown:

319. Ms Leith recommended deletion of this term, reflecting a recommendation to the Stream 8 Hearing Panel considering Chapter 17 – Airport Zone to consolidate this definition with that of ‘Outer Control Boundary (OCB) Wanaka’. The Stream 8 Hearing Panel accepted that recommendation and we heard no evidence that would cause us to take a different view. Accordingly, we likewise recommend its deletion.

6.78. Outer Control Boundary (OCB) Wanaka:

320. Ms Leith recommended amendments to this definition that reflected some (but not all of the) changes suggested to the Stream 8 Hearing Panel considering Chapter 17. In particular, the version of the definition recommended by Ms Leith in her section 42A Report retained reference to a date which was omitted from the definition recommended to and accepted by the Stream 8 Hearing Panel. In her tabled evidence for QAC, Ms O’Sullivan pointed out that any reference to a date in this definition needed to acknowledge that the relevant dates were different as between Queenstown and Wanaka. When Ms Leith appeared, we also discussed with her the potential ambiguity referring to “*future predicted day/night sound levels*” – that might be taken to mean future predictions rather than the current prediction of the position at a future date (as intended). Ms Leith suggested amendments to address both points.
321. We think it is preferable to specify the reference date at both airports (as Ms Leith suggests) rather than leave that open (as the Stream 8 Hearing Panel’s recommendation would do) to be clearer what it is that the OCBs seek to do. Accordingly, we recommend acceptance of Ms Leith’s revised definition, as shown in Appendix 1.

6.79. Passenger Lift System:

322. Ms Leith recommended a new definition for this term, reflecting a recommendation to the Stream 2 Hearing Panel considering Chapter 21 – Rural Zone. The Stream 2 Hearing Panel accepted that recommendation.
323. Remarkables Park Limited¹³⁹ and Queenstown Park Limited¹⁴⁰ supported the suggested definition before us. We also received written legal submissions from Mr Goldsmith representing Mount Cardrona Station Limited¹⁴¹ expressing concern about the way in which the suggested definition was framed. However, when Mr Goldsmith appeared before us, he advised that on further reflection, he considered the concerns expressed in his written submissions unfounded and he withdrew them.
324. We discussed with Mr Williams, the planning witness for Remarkables Park Ltd and Queenstown Park Ltd, the logic of confining the definition of ‘passenger lift system’ to systems that transport passengers within or to a ski area sub-zone, given that the most visible (and well-known) passenger lift system in the District (the Skyline Gondola) does neither. Mr Williams advised that from a planning perspective, there was merit in broadening the definition and addressing the need for specific provisions governing lift systems in and around ski areas through the rules of Chapter 21. In her reply evidence however, Ms Leith advised that the submission the recommendation responded to was that of Mount Cardrona Station Limited, which was limited to integration between ski area sub-zones and nearby urban and resort zones. She advised further that neither that submission, nor the other submission seeking similar relief provided jurisdiction for definition of a passenger lift system not in the context of a ski area sub-zones, and therefore there was no jurisdiction to make the change we discussed with Mr Williams.
325. We accept that analysis. We contemplated a recommendation that the PDP be varied to provide for passenger lift systems not associated with ski area sub-zones, but given the Skyline Gondola was the subject of resource consent applications to permit a major refurbishing of

¹³⁹ Submission 807

¹⁴⁰ Submission 806

¹⁴¹ Submission 407: Supported in FS1097, FS1329 and FS1330

the existing facility that were before the Environment Court around the time of our hearing, we do not regard this as necessary at this point.

326. Given the lack of jurisdiction we have noted, we have no basis to recommend a change to the definition from that suggested by Ms Leith. Appendix 1 shows the suggested new definition.

6.80. Photovoltaics (PV):

327. Again, Ms Leith recommended a minor non-substantive change to improve consistency of expression in the Chapter. We agree with her suggested change, which is shown in Appendix 1.

6.81. Potable Water Supply:

328. In her Section 42A Report, Ms Leith noted (in the context of her discussion of the definition of the word 'site') her understanding that it is ultra vires to refer to future legislation within the PDP via a term such as 'replacement Acts'. Ms Leith's position reflected the legal submissions made to us by counsel for the Council. The reason why reference to future legislation is ultra vires is due to the uncertainty as to what that future legislation may contain.

329. When Ms Leith appeared before us, we inquired whether the same principle that counsel had made submissions on and she had accepted would apply to the definition of Potable Water Supply which, as notified, refers to the current drinking water standard "*or later editions or amendments of the Standards*". In her reply evidence, Ms Leith confirmed that the reference to future versions of the drinking water standards was an issue and recommended that it be deleted, in conjunction with a minor consequential amendment. We agree that this is appropriate. Because the deleted phrase is ultra vires and of no effect, its removal is a minor change within Clause 16(2).

6.82. Precedent:

330. Alan Cutler¹⁴² submitted that a definition of 'precedent' should be included in the PDP. Mr Cutler's reasons appeared to relate to the decisions of Council in relation to implementation of the ODP. Ms Leith advised, however, that the term is not used within the PDP. On that ground, and because the law on the significance of precedents in decisions under the Act is still evolving, she recommended definition not be included in Chapter 2. We agree, essentially for the same reasons, and recommend that this submission be declined.

6.83. Projected Annual Aircraft Noise Contour (AANC):

331. Ms Leith recommended a correction to the cross reference to the designation conditions, reflecting a recommendation accepted by the Stream 8 Hearing Panel considering Chapter 17 – Condition 13, not Condition 14.

332. We have no reason to take a different view and Appendix 1 reflects the suggested change.

6.84. Public Place:

333. This definition refers to the "*District Council*" when the defined term (council) should be used. Appendix 1 reflects that change.

6.85. Radio Communication Facility:

334. Ms Leith recommended a new definition for this term be inserted, accepting the submission of Airways Corporation of New Zealand Limited¹⁴³ in this regard. Ms Leith identified that although 'radio communication facility' was no longer an activity in its own right, following

¹⁴² Submission 110

¹⁴³ Submission 566: Supported by FS1106, FS1208, FS1253 and FS1340

recommended amendments to the Stream 5 Hearing Panel considering Chapter 30 Energy and Utilities, the term was used in the recommended definition of ‘regionally significant infrastructure’ and on that account, it is useful to have it defined.

335. In her reply evidence¹⁴⁴, Ms Leith noted that the reference to the Radio Communications Act 1989 at the end of the definition sought by the submitter was unnecessary and recommended its deletion. We agree both that the definition of the term is desirable for the reasons set out in Ms Leith’s Section 42A Report (given our recommendation to accept that aspect of the definition of “regionally significant infrastructure”) and that the reference to the Radio Communications Act 1989 sought by the submitter should be deleted (not least because that Act does not actually define the term “*Radio Communication Facility*”). Accordingly, we recommend that this submission be accepted in part with a new definition as set out in Appendix 1.

6.86. Recession Lines/Recession Plane:

336. Although not the subject of submission or evidence, we noted as part of our deliberations that this definition (and the accompanying diagrams) are very difficult to understand. They appear designed for the benefit of professionals who already understand the concept of recession planes, and what the diagrams seek to achieve. While there are some aspects of the PDP where lay people may need the assistance of professional advisors, this need not be one of them. We recommend that the Council give consideration to a variation to this aspect of Chapter 2 to provide a definition and interpretative diagrams that might be better understood by lay readers of the PDP. We have attempted to formulate a more readily understood definition ourselves, which is attached to this Report as Appendix 4

6.87. Regionally Significant Infrastructure:

337. Ms Leith recommended insertion of a new definition of this term, reflecting recommendations made to the Stream 1B Hearing Panel considering Chapter 3 – Strategic Direction, supplemented by changes recommended to the Stream 5 Hearing Panel considering Chapter 30 – Energy and Utilities. Ms Leith also recommended updating the suggested cross reference to the Resource Management (National Environmental Standards for Telecommunication Facilities Regulations 2016). The Stream 1B Hearing Panel recommended several amendments to the definition of this term, which the Stream 5 Hearing Panel adopted. We have no basis to take a different view from the Hearing Panels that have already considered the matter.

338. We note that we do not consider the suggested cross reference to the Regulations noted above to be helpful as neither ‘telecommunication facility’ nor ‘radio communication facility’ are in fact defined in the Regulations. Our recommendation, reflecting the recommendations we have received from the Stream 1B (and Stream 5) Hearing Panels, is set out in Appendix 1.

6.88. Registered Holiday Home:

339. Ms Leith recommended minor grammatical changes to the definition, deletion of the first advice note and amendment of the second note. However, this definition is the subject of the Stage 2 Variations (which proposes that it be deleted) and thus we need not consider it further.

6.89. Registered Home Stay:

340. Ms Leith recommended deletion of the advice note notified with this application, for the same reason as the corresponding note in relation to ‘registered holiday home’. Again, however, this definition is the subject of the Stage 2 Variations and we therefore do not need to form a view on Ms Leith’s recommendations.

¹⁴⁴ A Leith, Reply Evidence at 9.1

6.90. Relocated/Relocatable Building:

341. Ms Leith recommended amendment to this definition, reflecting a recommendation to the Stream 5 Hearing Panel considering Chapter 35 – Temporary Activities & Relocated Buildings. The Stream 5 Hearing Panel recommends an additional change (to insert the word “newly”), but otherwise agrees with the recommendation¹⁴⁵. We heard no evidence that would cause us to take a different view although we recommend that the capitalising and bolding of the terms ‘removal’ and ‘re-siting’ be removed, to promote consistency with the use of defined terms. Appendix 1 reflects the recommended end result.

6.91. Relocation:

342. Ms Leith recommended a reformatting change to shift the initial reference to building into the defined term. We agree with that suggested change which promotes greater consistency in Chapter 2. The Stream 5 Hearing Panel also recommends removal of the words “and re-siting’ from this definition to avoid confusion¹⁴⁶. We agree with that change also. Appendix 1 shows the recommended end result.

6.92. Remotely Piloted Aircraft:

343. Ms Leith recommended a new definition for this term, reflecting a recommendation to the Stream 8 Hearing Panel considering Chapter 17 – Airport Zone. That Hearing Panel agrees with the recommendation and we had no basis on which to take a different view. Accordingly, our recommended Appendix 1 shows the suggested new definition.

6.93. Removal of a Building:

344. Ms Leith recommended a new definition of this term, reflecting a recommendation to the Stream 5 Hearing Panel considering Chapter 35 – Temporary Activities & Relocated Buildings. The Stream 5 Hearing Panel agreed with the desirability of a new definition. Ms Leith’s suggested definition shifts some of the definition into the defined term and includes reference to demolition as an express exclusion. Both suggested changes are minor in nature. To promote consistency in the way other terms have been defined in Chapter 2, however, we think that the cross reference to building should be in brackets: i.e. “*Removal (Building)*”. The second suggested change provides a desirable clarification for the avoidance of doubt.

6.94. Renewable Electricity Generation Activities:

345. Ms Leith recommended minor grammatical changes (removing unnecessary capitals for separately defined terms). We agree with the suggested change which promote consistency in the reference to defined terms. Appendix 1 shows the recommended end result.

6.95. Residential Flat:

346. In her Section 42A Report¹⁴⁷, Ms Leith noted that although this term was discussed in the course of the Stream 2 Hearing Panel’s consideration of Chapter 21 – Rural Zone and was the subject of staff recommendations on submissions, that Hearing Panel directed that the relevant submissions be transferred to this hearing. Ms Leith recommended three changes to the notified definition:

- Insert provision for an increased floor area (up to 150m²) in the Rural and Rural Lifestyle Zones;
- Remove reference to leasing;

¹⁴⁵ Refer Report 8 at Section 20.2

¹⁴⁶ Ibid

¹⁴⁷ Section 15

- Delete the second note stating that development contributions and additional rates apply.
347. In the case of the first two suggested changes, Ms Leith adopted the recommendations that had earlier been made to the Stream 2 Hearing Panel.
348. She also referred us to the reasoning contained in her own Section 42A Report to the Stream 6 Hearing Panel, considering Chapter 7 of the PDP.
349. There were a number of submissions on this term that were scheduled for hearing as part of Stream 10:
- a. Dalefield Trustee Limited¹⁴⁸ and Grant Bissett¹⁴⁹, supporting the notified definition.
 - b. Christine Brych¹⁵⁰, seeking clarification as to whether the definition refers to the building or its use.
 - c. QAC¹⁵¹, seeking a limitation that a residential flat is limited to one per residential unit or one per site, whichever is less.
 - d. Arcadian Triangle Limited¹⁵², seeking to replace the limitation on gross floor area with a limitation based on the percentage occupation of the site, to delete reference to leasing or shift that reference into the advice notes and to delete the advice notes or make it clear that they are for information only.
350. Addressing the submission seeking changes to the notified definition, Ms Leith's Chapter 7 Staff Report pointed out that the term 'residential activity' is defined to mean the use of land and buildings. The term 'residential flat' in turn incorporates 'residential activity' as defined. This effectively answers Ms Brych's concern. The definition relates both to the building and the use of the building.
351. Ms Leith (again in the context of her Chapter 7 Report) suggested that there was good reason not to limit sites to a maximum of one residential unit and one residential flat. She pointed in particular to the intent of the PDP to address growth and affordability issues¹⁵³. QAC's tabled evidence did not seek to pursue their submission and thus Ms Leith's reasoning was effectively left uncontradicted. We agree with her reasoning in that regard.
352. Ms Leith's suggested amendment to make special provision for residential flats in the Rural and Rural Lifestyle Zones reflected Mr Barr's reply evidence in the context of the Stream 2 hearing, accepting an argument Mr Goldsmith had made for Arcadian Triangle Limited that the 70m² maximum size reflected an urban context¹⁵⁴. The Stream 2 Hearing Panel agreed with that recommendation, as do we. We also agree with Ms Leith's reasoning in her Chapter 7 Report that a rule that allowed residential flats to be established by reference to the size of the principal residential unit would permit over large residential flats associated with very large residential units. While arbitrary, a maximum floor area provides the appropriate degree of control¹⁵⁵. Accordingly, we recommend that that aspect of the Arcadian Triangle submission may be accepted only in part.

¹⁴⁸ Submission 330

¹⁵⁰ Submission 243: Opposed by FS1224

¹⁵¹ Submission 433: Opposed by FS1097 and FS1117

¹⁵² Submission 836

¹⁵³ Refer Chapter 7 Section 42A Report at 14.21

¹⁵⁴ Refer C Barr Reply Evidence in Stream 2 Hearing at 6.4

¹⁵⁵ Refer Chapter 7, Section 42A Report at 14.23-14.24

353. Ms Leith accepted the underlying rationale of the Arcadian Triangle submission regarding specific reference to leasing. We agree with that reasoning also. A residential flat might be leased. It might be occupied by family members. It might be occupied by visitors on an unpaid basis. We do not understand why, there is any need to refer specifically to a leasehold arrangement, and impliedly exclude other arrangements that the landowners might enter into.
354. Lastly, we agree with Ms Leith’s suggested deletion of the note relating to development contributions and rates. Development contributions are levied under the separate regime provided in the Local Government Act 2002. Rates are levied under the Local Government (Rating) Act 2002. The District Plan should not presume how the separate statutory powers under other legislation will be exercised in future.
355. We also do not think there is any necessity to qualify the first note providing clarification as to the relationship between residential flats and residential units as Arcadian Triangle seeks. It does not have substantive effect – it describes the position that would result in the absence of any note.
356. In summary, we recommend that the definition of “*residential flat*”, be as suggested to us by Ms Leith to the extent that differs from the recommendation we have received from the Stream 2 Hearing Panel. Appendix 1 reflects that position.
- 6.96. Residential Unit:**
357. Ms Leith recommended deletion of the reference to dwelling in the first line of the notified definition, reflecting in turn, a recommendation to the Stream 6 Hearing Panel considering Chapter 7 – Low Density Residential. That Hearing Panel accepted that recommendation¹⁵⁶.
358. In her Section 42A Report, Ms Leith discussed a submission by H Leece and A Kobienia¹⁵⁷ seeking that rather than focussing on kitchen and laundry facilities, the definition should include flats, apartments and sleepouts on a site that are installed with ablution facilities that enable independent living. The purpose of this submission is to preserve, in particular, rural living amenity values.
359. Ms Leith’s response¹⁵⁸ is that the ‘residential unit’ is the key concept to control the number and intensity of residential activities within each zone. She notes that the definition of ‘residential unit’ does not incorporate ‘residential flats’ which are intended to be a minor form of accommodation within the same ownership, but which enable self-contained living separate from the residential unit (potentially we note in a separate building). Ms Leith notes that the PDP enables ‘residential flats’ in order to promote housing diversity and as a result, did not agree with the submission that residential flats be included within the definition of ‘residential units’.
360. Ms Leith also observes that self-contained apartments are already within the definition of ‘residential units’.
361. Ms Leith discussed sleepouts, they being buildings capable of residential living that are not completely self-contained and which therefore require access to the ‘residential unit’. In her

¹⁵⁶ Refer Report 9A at Section 35.11

¹⁵⁷ Submission 126

¹⁵⁸ A Leith, Section 42A Report at Section 16

view, a sleepout containing only a bathroom and no kitchen could not easily be resided in for long-term purposes without a relationship to the 'residential unit' on the site. She therefore thought that they were appropriately categorised as an accessory building.

362. We canvassed with Ms Leith whether there was a potential problem with sleepouts given that, as an accessory building, they could be located within boundary setback distances. In her reply evidence, Ms Leith discussed the point further. She pointed out that there are rules that apply to accessory buildings within normal setbacks which manage potential adverse effects and that although the ODP permits establishment of sleepouts as accessory buildings now, that has not proven to be a problem in practice. Having tested Ms Leith's reasoning, and in the absence of any evidence from the submitter, we accept her recommendation that the relief sought by the submitter should be declined and that deletion of reference to dwellings in the first line should be the only amendment we recommend. The revised version of the definition in Appendix 1 reflects that position.

6.97. Re-siting:

363. Ms Leith recommended insertion of a new definition, reflecting recommendations to the Stream 5 Hearing Panel considering Chapter 35 – Temporary Activities & Relocated Buildings, but reformatted to include reference to buildings within the defined term. We heard no evidence which would cause us to take a different view about the desirability of having a new definition from the Stream 5 Hearing Panel, which accepted the officer's recommendation¹⁵⁹. However, we recommend that the reference to buildings in the defined term be in brackets for consistency with other definitions in Chapter 2 with a limited subject matter. Appendix 1 shows the recommended end result.

6.98. Resort:

364. As discussed below, in the context of 'Urban Development', the Stream 1B Hearing Panel recommends a definition of this term be added, consequent on the changes it recommends to the definition of 'Urban Development'. Appendix 1 reflects the recommended addition.

6.99. Retail Sales/Retail/Retailing:

365. The definition of this term was the subject of extensive evidence and submissions on behalf of Bunnings Limited¹⁶⁰. The thrust of the case advanced for Bunnings was that building suppliers should be expressly excluded from the definition of 'retail'. The rationale for the Bunnings case was that the very large format enterprises operated by Bunnings do not sit comfortably within the policy framework for retail activities which seek to consolidate retail and commercial activities in town centres. As it was put to us, the result of the existing definition of 'retail' combined with the strategic direction contained in Chapter 3 is that either large-scale trade and building suppliers like Bunnings will be forced to locate in the town centres, which will undermine the objective of locating core retail activities in those areas to create vibrant centres, or alternatively, those large scale trade and building suppliers will be precluded from locating in the District entirely.

366. We discussed the issues posed by the Bunnings submission with Mr Minhinnick, counsel for Bunnings, at some length because it appeared to us that although the submitter had identified a real issue, the suggested solution of excluding trade and building suppliers from the definition of 'retail' was unsatisfactory and, indeed, might even have precisely the opposite result from that which the submitter sought.

¹⁵⁹ Refer Report 8 at Section 20.2

¹⁶⁰ Submission 746: Supported by FS1164

367. More specifically, although the evidence of Ms Davidson for Bunnings was a little coy about the percentage of Bunnings' operations represented by retail sales to the public, compared to sales to builders and other tradesmen, it was clear to us that the typical Bunnings operation has a substantial retail component. On the face of the matter, therefore, it was inappropriate to deem such operations not to be retail activities when they are retail activities¹⁶¹.
368. We also noted that so called 'big box retail' is currently already provided for by the ODP in the Three Parks Area in Wanaka. Assuming the ODP provisions are not materially changed when that part of the ODP is reviewed, if trade suppliers were to be excluded from the definition of 'retail', they would consequently be excluded from establishing within the Three Parks Zone, leaving no obvious site for them in Wanaka.
369. Moreover, Bunnings had not sought a parallel amendment to the definition of 'industrial activity' and its planning witness, Ms Panther Knight, told us that in her view it would be inappropriate to amend that definition to include a Bunnings-type operation.
370. We observed to Mr Minhinnick that the Chapter 3 approach was to avoid non-industrial activities occurring within industrial zoned areas – refer notified Policy 3.2.1.2.3 - suggesting that if a Bunnings-type operation was excluded from the definition of 'retail', and did not fall within the definition of an industrial activity, there might be nowhere within the District, in practice, for it to establish. We invited the representatives of Bunnings to consider these matters and to revert to us if they could identify a more satisfactory solution.
371. Counsel for Bunnings duly filed a memorandum suggesting that, rather than excluding building and trade suppliers from the definition of 'retail', the alternative relief sought by Bunnings was to amend the definition of 'trade supplier'. We will return to the issues raised by Bunnings in the context of our discussion of that definition. Suffice it to say that, as we think Bunnings representatives themselves came to accept, we do not consider an exclusion of building and trade suppliers from the definition of 'retail' to be appropriate. We therefore agree with the recommendation of Ms Leith¹⁶² that the submissions initially made by Bunnings to us be rejected.

6.100. Reverse Sensitivity:

372. Ms Leith recommended a new definition for this term, responding to the submissions of the Oil Companies¹⁶³ and Transpower New Zealand Limited¹⁶⁴. In her Section 42A Report¹⁶⁵, Ms Leith recorded that the Section 42A Report on Chapter 30 – Energy and Utilities reported on Transpower's submission and recommended its rejection on the basis that the term 'reverse sensitivity' has been defined by case law, and there is therefore potential that it might be further redefined. Ms Leith observes, however, that that recommendation (and consequently the Stream 5 Hearing Panel's consideration of the point) did not consider the submission of the Oil Companies seeking a somewhat less verbose definition (than that of Transpower) and the fact that the Proposed RPS has adopted a definition of 'reverse sensitivity' which is identical to that proposed by the Oil Companies. Lastly, Ms Leith observed that no appeals were lodged against the Proposed RPS as regards that definition.

¹⁶¹ Cf *Hawke's Bay and Eastern Fish and Game Councils v Hawke's Bay Regional Councils* [2014] NZHC 3191 on 'factual deeming'

¹⁶² Refer Leith Reply Evidence at 23.2

¹⁶³ Submission 768: Supported by FS1211 and FS1340

¹⁶⁴ Submission 805: Supported by FS1211; Opposed by FS1077

¹⁶⁵ Refer A Leith Section 42A Report at section 17

373. We consider that a definition of reverse sensitivity is desirable given that the term is used in a number of different contexts in the PDP. As Ms Leith observed, given that the Proposed RPS has adopted the meaning advocated by the Oil Companies and that it has not been appealed on the point, there is good reason to do likewise in the PDP context.

374. For that reason, we recommend a new definition of reverse sensitivity accepting the Oil Companies' submission.

6.101. Road Boundary:

375. Ms Leith recommended deletion of the note to this definition as notified. We agree that the note is unnecessary and recommend that it be deleted accordingly.

6.102. Sensitive Activities – Transmission Corridor:

376. Ms Leith recommended deletion of this term, reflecting in turn, the recommendation to the Stream 5 Hearing Panel considering Chapter 30 – Energy and Utilities. The Stream 5 Hearing Panel agrees with the recommendation and we heard no evidence that would give us a basis to take a different view. Accordingly, we too recommend its deletion.

6.103. Sensitive Activities:

377. X-Ray Trust Limited¹⁶⁶ sought a definition of “*sensitive activities*” is included within the PDP. The submission was cross referenced to notified Objective 21.2.4 which relates to the conflict between sensitive activities and existing and anticipated activities in the Rural Zone. The submitter did not suggest how the term might be defined. Given that, we would have difficulty inserting a definition which provided anything other than the natural and ordinary meaning of the term, for natural justice reasons. If any definition could only express the natural and ordinary meaning, one has to ask whether it serves any useful purpose.

378. Ms Leith also directed us to the objectives and policies of Chapter 21 which provide clarification as to how sensitivity might be assessed in the rural context. She noted that the specific instance of sensitivity of activities within the National Grid Corridor is addressed by a separate definition.

379. In summary, we agree with Ms Leith's recommendation¹⁶⁷ that there is no need to define the term 'sensitive activities'.

380. We note that the submitter sought also that new definitions of 'valuable ecological remnants' and 'ecological remnants' be inserted. Those terms are only used in Chapter 43 and the Stream 9 Hearing Panel considering that Chapter did not recommend inclusion of new definitions of those terms¹⁶⁸. X-Ray Trust did not provide wording to support its submission and Council has accepted the recommendations of the Stream 9 Hearing Panel (that were released in advance of the reports of other Hearing Panels). We do not consider we have any basis to recommend amendment to these definitions.

6.104. Service Station:

381. Ms Leith recommended a minor non-substantive change to this definition to separate out the exclusion in the second bullet point of the notified definition. We think that it is desirable to separate the exclusion to make the end result clearer, notwithstanding the support of the Oil

¹⁶⁶ Submission 356

¹⁶⁷ A Leith, Section 42A Report at 18.6

¹⁶⁸ Refer Millbrook Recommendation Report 1 September 2017 at 97

Companies¹⁶⁹ for the definition as notified. However, we recommend that the end result be expressed slightly differently, but still ultimately to the same effect. Appendix 1 shows our suggested revision.

6.105. SH6 Roundabout Works:

382. Ms Leith recommended acceptance of New Zealand Transport Agency¹⁷⁰ submission seeking that this definition be deleted as it is part of a notice of requirement. We have already discussed the relationship between Chapter 2 and Chapter 37 (Designations), essentially agreeing with the position underlying this submission. Accordingly, we recommend that the definition be deleted.

6.106. Sign and Signage:

383. Ms Leith's discussion of this issue in her Section 42A Report¹⁷¹ recorded that the Council's corporate submission¹⁷² sought that all definitions relating to signage be replaced with those recently made operative under Plan Change 48. Ms Leith analysed the Plan Change 48 definitions, identifying that the PDP definitions of 'sign and signage' and related terms differ from those in Plan Change 48 only by way of formatting. Ms Leith also noted that the only term related to signage used in the PDP is 'sign and signage'. She recommended that the related terms all be deleted. While we agree with that recommendation for those definitions within our jurisdiction, most of the definitions concerned are the subject of the Stage 2 Variations, and therefore, whether they remain in Chapter 2 will be determined in that process.

384. As regards the definition of 'sign and signage', Ms Leith recommended two changes that she described as non-substantive in nature.

385. The first suggested change is to remove the word "*includes*" in the third bullet point. We agree with that recommendation. Because the definition commences, "*means:...*", use of the word "*includes*" does not fit the form of the definition.

386. The second recommendation related to the notes to the definition addressing corporate colour schemes and cross referencing other terms. That recommendation has been overtaken by the Stage 2 Variations and thus we need not address it further.

387. Accordingly, we recommend that the term be amended to delete the words "*includes*" (in the third bullet point), and leave any consideration of the matters covered by the notified Notes to the Stage 2 Variation hearing process.

6.107. Site:

388. This term has been the subject of discussion at a number of hearings on the PDP. It is of particular importance to the provisions related to subdivision. The Reporting Officer in the Stream 4 hearing (Mr Nigel Bryce) deferred consideration of these issues until this hearing.

389. Ms Leith's discussion of the point¹⁷³ also noted a recommendation from the Reporting Officer in the Stream 6 Hearing Chapter 9 – High Density Residential (Ms Kim Banks) that the definition of 'site' be addressed either at this hearing, or by way of variation.

¹⁶⁹ Submission 768

¹⁷⁰ Submission 719

¹⁷¹ At Section 25

¹⁷² Submission 383

¹⁷³ A Leith, Section 42A Report at Section 19

390. The Stage 2 Variations now propose a new definition of ‘site’. We therefore need not consider it further.

6.108. Ski Area Activities:

391. Ms Leith recommended amendments to this definition, reflecting recommendations to the Stream 2 Hearing Panel considering Chapter 21 – Rural Zone. That Hearing Panel accepted those recommendations and for our part, we had no basis for taking a different view. Accordingly, we recommend that the definition be amended as shown in Appendix 1.

6.109. Sloping Site:

392. Ms Leith recommended a new definition of this term, reflecting a recommendation made to the Stream 6 Hearing Panel considering Chapter 9 – High Density Residential, but including a minor formatting change to express the new term consistently with other definitions in Chapter 2. The Stream 6 Hearing Panel agreed with the suggested definition¹⁷⁴ and we had no basis to take a different view. Accordingly, Appendix 1 shows the suggested new definition in the terms recommended by Ms Leith.

6.110. Small Cells Unit

393. Ms Leith initially recommended a new definition of the term “*small cells*”, reflecting a recommendation made to the Stream 5 Hearing Panel considering Chapter 30 – Energy & Utilities. The tabled statement of Mr McCallum-Clark on behalf of the telecommunication companies¹⁷⁵ pointed out that the National Environmental Standard for Telecommunication Facilities 2016 provides a definition of small cells (more specifically, for “*Small Cells Unit*”) and recommended that that be used in the PDP. That suggestion accords with the recommendation of the Stream 5 Hearing Panel, reflecting its recommendation that relevant rules refer to “*small cells unit*”.

394. We agree with that recommendation. Appendix 1 shows the revised definition, as per the 2016 NES.

6.111. Solar Water Heating:

395. Ms Leith recommended a minor reformatting change to this definition to make it consistent with the balance of the Chapter 2 definition. We agree with her suggested change and Appendix 1 shows the recommended revised definition.

6.112. Stand-Alone Power Systems (SAPS):

396. Again, Ms Leith recommended minor reformatting/grammatical changes to make this definition consistent with the balance of Chapter 2. We agree with her suggested changes, which are shown in Appendix 1.

6.113. Structure Plan:

397. While not the subject of submission or comment from Ms Leith, we note that the Stream 4 Hearing Panel recommends a definition of ‘Structure Plan’ be inserted into Chapter 2, to assist interpretation of rules that Hearing Panel has recommended be inserted.

398. The suggested definition is:

¹⁷⁴ Refer Report 9A at Section 37.1

¹⁷⁵ Submissions 179, 191 and 781

“Structure Plan means a plan included in the District Plan and includes Spatial Development Plans, Concept Development Plans and other similarly titled documents.”

399. We have no basis to take a different view, and accordingly recommend a new definition in those terms

6.114. Subdivision and Development:

400. At this point, we note the recommendation¹⁷⁶ of the Stream 1B Hearing Panel considering Chapter 6 that we include a definition of ‘Subdivision and Development’. We heard no evidence to suggest we should take a different view and accordingly recommend accordingly. Appendix 1 shows the suggested definition.

6.115. Support Structure:

401. Ms Leith recommended a new definition of this term reflecting a recommendation to the Stream 5 Hearing Panel considering Chapter 30 – Energy and Utilities. Mr McCallum-Clark on behalf of the telecommunication companies¹⁷⁷ suggested in his tabled statement that the new definition needed to include reference to telecommunication lines, as the term is used within the definition of ‘minor upgrading’. Ms Leith agreed with that point in the summary of her evidence presented at the hearing. The Stream 5 Hearing Panel, however, notes that the definition sought by the relevant submitter¹⁷⁸ did not include reference to telecommunication lines and concluded that it did not have jurisdiction to recommend a satisfactory definition. We agree and accordingly do not accept Ms Leith’s recommendation¹⁷⁹.

6.116. Telecommunication Facility:

402. Ms Leith recommended deletion of this term consequent on a recommendation to the Stream 5 Hearing Panel considering Chapter 30 – Energy and Utilities. The Stream 5 Hearing Panel accepts the suggested deletion¹⁸⁰ and we heard no evidence that would cause us to take a different view.

6.117. Temporary Activities:

403. Ms Leith recommended amendment to this term reflecting recommendations made to the Stream 5 Hearing Panel considering Chapter 35 – Temporary Activities & Relocated Buildings, together with minor grammatical/reformatting changes. The Stream 5 Hearing Panel largely accepts the suggested amendments. It considers, however, that there is no scope to expand the ambit of provision for informal airports and recommends that the final bullet point be amended to provide a limit on that provision¹⁸¹. We heard no evidence that would cause us to take a different view.

404. Accordingly, Appendix 1 shows the changes recommended by Ms Leith, save for the final bullet point, where we have adopted the Stream 5 Hearing Panel’s recommendation.

6.118. Temporary Events:

405. Ms Leith Recommended insertion of a note on the end of this definition, reflecting in turn a recommendation to the Stream 5 Hearing Panel considering Chapter 35 – Temporary Activities

¹⁷⁶ Refer Recommendation Report 3 at Section 8.4

¹⁷⁷ Submissions 179, 191 and 781

¹⁷⁸ Aurora Energy: submission 635

¹⁷⁹ Recommendation report 8 at Section 20.3

¹⁸⁰ Report 8 at Section 6.3

¹⁸¹ Refer Recommendation Report 8 at Section 20.3

& Relocated Buildings. The Stream 5 Hearing Panel largely accepts that recommendation¹⁸² and we had no basis on which to take a different view. Appendix 2 accordingly shows the term defined as per Ms Leith's recommendation.

6.119. Temporary Military Training Activity (TMTA):

406. Ms Leith recommended this new definition, reflecting in turn a recommendation to the Stream 5 Hearing Panel considering Chapter 35 – Temporary Activities & Relocated Buildings, subject only to a minor reformatting change to be consistent with other definitions. The Stream 5 Hearing Panel accepts the recommendation with minor wording changes¹⁸³. We heard no evidence that would cause us to take a different view. Accordingly, Appendix 1 shows the new definition.

6.120. Tourism Activity:

407. Ms Leith drew to our attention¹⁸⁴ that a number of submitters sought a definition of this term and that the Section 42A Report on Chapter 21 – Rural Zone recommended that those submissions be rejected. Four additional submissions seeking the same relief were listed for hearing as part of Stream 10 – those of D & M Columb¹⁸⁵, Cardrona Alpine Resort Limited¹⁸⁶, Amrta Land Limited¹⁸⁷ and Nga Tahu Tourism Limited¹⁸⁸, together with the relevant further submissions. None of the other submitters in question appeared to explain to us why a definition of this term would be beneficial notwithstanding the recommendation to the Stream 2 Hearing Panel, and the submissions themselves are relatively uninformative, containing a bare request for a new definition, with suggested wording, but (apart from Submission 716) no reasons. Submission 716 suggested that differentiating tourism activities from other commercial activities would provide certainty and aid effective and efficient administration of the Plan. However, it did not explain how the suggested definition would do that, and from our observation, the suggested wording is so broadly expressed that it is difficult to conceive of many commercial activities in the district that would fall outside it.

408. Accordingly, like Ms Leith, we see no reason to conclude that a definition of 'tourism activity' should be inserted into the PDP.

6.121. Trade Supplier:

409. Ms Leith recommended a new definition of this term, reflecting in turn a recommendation to the Stream 8 Hearing Panel considering Chapter 16 – Business Mixed Use Zone. The Stream 8 Hearing Panel recommends acceptance of that position.

410. As above, Bunnings Limited¹⁸⁹ suggested that its submission might appropriately be addressed by an amendment to this definition reading:

"Trade suppliers are to be treated in the Plan as both retail and industrial activities, unless trade suppliers are otherwise specifically provided for."

411. This suggestion reflected a discussion we had with counsel for Bunnings Limited and with its planning witness, Ms Panther Knight to the effect that part of the problem Bunnings had was

¹⁸² Report 8 at Section 20.4

¹⁸³ Ibid

¹⁸⁴ Section 42A Report at Section 21

¹⁸⁵ Submission 624: Supported by FS1097

¹⁸⁶ Submission 615: Supported by FS1097, FS1105, FS1117, FS1137, FS1153, and FS1187

¹⁸⁷ Submission 677: Supported by FS1097, and FS1117; Opposed by FS1035, FS1074, FS1312 and FS1364

¹⁸⁸ Submission 716: Supported by FS1097 and FS1117

¹⁸⁹ Submission 746

that its large format operations were something of a hybrid, partly retail and partly industrial in nature.

412. Bunnings also suggested that the word “*wholly*” should be deleted from the definition recommended to the Stream 8 Hearing Panel.
413. Ms Leith considered this suggestion in her reply evidence. While she supported deletion of the word “*wholly*” in order to allow for some flexibility, she did not support the substantive change at the end of the definition, considering that that would pre-empt the content of the review of the Industrial Zone provisions that is yet to come, and indeed the review of any other chapter that might be suitable for a trade supplier, such as the Three Parks Special Zone. She also noted that the Business Mixed Zone already specifically provides for ‘Trade Suppliers’ and so the amendment is not required.
414. Ms Leith’s concerns have some validity. While we think there is merit in the suggestion that the non-retailing component of Bunnings-type operations should be recognised, the suggested amendment to the definition reads like a rule rather than a definition. On reflection, we are also uncomfortable with defining trade suppliers to be, in part, industrial activities. On the basis of the evidence we heard from Ms Davidson for Bunnings, we think that the large format operations that Bunnings and its principal competitor (Mitre 10 – Mega) undertake are more correctly described as a mixture of retailing and wholesaling. Whether it is appropriate for such operations to be provided for in Industrial Zones is a different question that needs to be addressed in a subsequent stage of the PDP review process. Relevant to that consideration, the Stream 1B Hearing Panel has recommended that what was Policy 3.2.1.2.3 be softened so that it now provides for non-industrial activities ancillary to industrial activities occurring within Industrial Zones.
415. In summary, therefore, we accept that some amendment to the definition of ‘Trade Supplier’ is desirable from that recommended by the Stream 8 Hearing Panel, but suggest it be limited to altering it to read:
“Means a business that is a mixture of wholesaling and retailing goods in one or more of the following categories...”

6.122. Trail:

416. While not the subject of submission or consideration by Ms Leith, the Stream 1B Hearing Panel recommends¹⁹⁰ a minor non-substantive change to this definition. We have no reason to take a different view to that Hearing Panel and accordingly Appendix 1 shows the recommended amendment.

6.123. Urban Development:

417. Ms Leith recommended a substantial amendment to this definition, reflecting recommendations to the Stream 1B Hearing Panel considering Chapter 3 – Strategic Direction. The Stream 1B Hearing Panel recommends further changes to the definition of ‘urban development’ and insertion of a new term ‘resort’.
418. The Hearing Panel’s Report contains a lengthy discussion of the rationale for the suggested changes¹⁹¹.

¹⁹⁰ See Report 3 at Section 8.7

¹⁹¹ Refer Report 3 at Section 3.5

419. Ms Leith referred us to the submission of MacTodd¹⁹² which sought that the definition of ‘urban development’ be amended in accordance with the Environment Court’s decision in *Monk v Queenstown Lakes District Council*¹⁹³. MacTodd did not appear before us to explain how exactly it thought that the definition should be amended, but the Stream 1B Hearing Report considers the Environment Court’s decision at some length, as well as MacTodd’s submission, before arriving at its recommendation. Further consideration of MacTodd’s submission does not cause us to come to a different view to the Stream 1B Hearing Panel.
420. Mr Goldsmith appeared at the Stream 10 Hearing on behalf of Ayrburn Farm Estate Limited¹⁹⁴ and took issue with the recommended exclusion of Millbrook and Waterfall Park Special Zones from the definition of urban development. Mr Goldsmith made it clear when he appeared before us that he was not seeking to debate the merits but wished to alert the Hearing Panel to the relevance of this point to the argument he was yet to make in the context of the Wakatipu Basin Mapping Hearing as to the location of the Arrowtown Urban Growth Boundary. He also queried the jurisdiction for excluding Millbrook and Waterfall Park.
421. The Stream 1B Hearing Report addresses both the jurisdictional issues¹⁹⁵ and the merits of how ‘urban development’ should be defined for the purposes of the PDP. Mr Goldsmith did not present us with any arguments that suggested to us that the logic of the Stream 1B Hearing Panel’s recommendations is unsound and we adopt those recommendations. Accordingly, Appendix 1 has both a new definition of ‘resort’ and a revised definition of ‘urban development’.

6.124. Urban Growth Boundary:

422. MacTodd¹⁹⁶ sought that this definition be amended in accordance with the Environment Court’s decision in *Monk v Queenstown Lakes District Council* referred to in the context of the definition of ‘urban development’. We have reviewed the *Monk* decision and while the Environment Court discusses the interrelationship between the definitions of ‘urban development’ and ‘urban growth boundary’ it does not appear to us to offer any guidance as to what the definition of the latter term should be, if it is to be amended.
423. MacTodd did not appear before us to assist us in that regard. Accordingly, we recommend that MacTodd’s submission be rejected.
424. Ms Leith, however, recommended a minor change to the definition to remove the repetitive reference to boundaries in the notified definition, together with a minor grammatical change. We agree that the recommended objective reads more simply and clearly and, accordingly, adopt Ms Leith’s suggestion in Appendix 1.

6.125. Utility:

425. Ms Leith recommended two changes to this definition, both arising out of recommendations to the Stream 5 Hearing Panel considering Chapter 30 – Energy and Utilities. The first is to refer to substations in the context of other infrastructure related to the transmission and distribution of electricity and the second to add reference to flood protection works. The Stream 5 Hearing Panel agrees with both recommendations and we did not hear any evidence that would cause us to take a different view.

¹⁹² Submission 192

¹⁹³ [2013] NZEnvC 12

¹⁹⁴ Submission 430

¹⁹⁵ The submission of Millbrook Country Club (696) clearly provides jurisdiction

¹⁹⁶ Submission 192

426. We note the tabled memorandum of Ms Irving for Aurora Energy Ltd¹⁹⁷ on this point. Ms Irving suggested that the term ‘utility’ needed to be amended to catch a wider range of electricity distribution infrastructure. Ms Irving’s point has largely been overtaken by our recommendation to insert a separate definition of ‘electricity distribution’ and in any event, we note that the definition has a catchall referring back to the Act’s definition of ‘network utility operation’, which would include all of Aurora’s network.
427. We do not believe therefore that further amendments are required to address Ms Irving’s concerns.
428. We do suggest, however, that the words “but not limited to” be deleted as unnecessary verbiage, and that the cross reference to the definition of telecommunication facilities should be deleted, consequent on removal of that definition.
429. Accordingly, with the addition of correction of a typographical error (the first bullet point should refer to transmission singular of electricity) and the deletions just referred to, we recommend the amendments to this term endorsed by the Stream 5 Hearing Panel.

6.126. Visitor Accommodation:

430. This definition was the subject of a number of submissions. However, consideration of the issues raised by those submissions has been overtaken by the Stage 2 Variations, which propose an amended definition. We need not, therefore, consider it further.

6.127. Waste:

431. H W Richardson Group¹⁹⁸ sought that this definition be amended to specify that ‘waste’ does not include cleanfill. Ms Leith recommended that that submission be accepted as a helpful amendment to the definition¹⁹⁹. We agree with that recommendation and Appendix 1 reflects the suggested change.

6.128. Waste Management Facility:

432. Ms Leith noted that this definition differs from that in Plan Change 49, related to earthworks, but considered that there was no scope to recommend substantive amendments to the PDP definition on this basis²⁰⁰. She did, however, recommend non-substantive amendments to correct typographical errors and clarify the relationship between the specified exclusions. We agree with those suggested amendments, which are shown in Appendix 1.

6.129. Wetland:

433. Ms Leith recommended deletion of the cross reference to the definition in the Act given that the balance of the notified definition in fact already sets out the Act’s definition of this term. We agree that the deleted text is unnecessary and that it should therefore be deleted.

6.130. Wholesaling:

434. In her Section 42A Report, Ms Leith recommended that this definition be referenced to the Airport Zone (as well as Three Parks and Industrial B Zones as notified), consequent on a recommendation to the Stream 8 Hearing Panel. The Stream 8 Hearing Panel refers the matter to us, so that it might be considered in the context of the whole Plan.

¹⁹⁷ Submission 635

¹⁹⁸ Submission 252

¹⁹⁹ A Leith, Section 42A Report at 24.8

²⁰⁰ Refer A Leith, Section 42A Report at 24.9

435. Reference to the Three Parks and Industrial B Zone should be deleted, given that those zones are not part of the PDP. The reporting officer on Stream 8 (Ms Holden) identified scope for the definition to apply in the Airport Zone²⁰¹.
436. We discussed with Ms Leith whether there was a case for the definition to apply beyond the three nominated zones. In her reply evidence, she acknowledged there is merit in a broader application, but expressed the opinion that there is no scope for amending the definition further.
437. We accept Ms Leith's conclusion that there is no scope to expand the application of the definition beyond the Airport Zone, and recommend that Council consider the desirability of a variation on the point.
438. In the interim, we recommend that the definition just be referenced to the Airport Zone, as Ms Holden recommended.

6.131. Wind Electricity Generation:

439. Ms Leith recommended a minor non-substantive amendment to this definition which promotes consistency with the formatting of the other definitions in Chapter 2. We agree that that consistency is desirable. Appendix 1 therefore sets out the change suggested by Ms Leith.

7. ACRONYMS:

440. Ms Leith suggested insertion of a new Section 2.2 in Chapter 2 collecting together all of the acronyms used in the PDP. We think that this is helpful for readers of the PDP. She considered that this was a non-substantive change simply providing clarification to Plan users (and therefore within Clause 16(2)). We agree and Appendix 1 includes a new Section 2.2 with a brief opening explanation as to what it includes.
441. In the list of acronyms, the acronyms currently referring to Heritage Landscapes²⁰² each need to be amended consequent on the recommendation of the Stream 3 Hearing Panel that these areas be described as Heritage Overlay Areas.
442. For similar reasons, RCL should be 'Rural Character Landscape', consequent on the recommendations of the Stream 1B Panel.
443. Lastly, the acronym 'R' suggested by Ms Leith is not required, given that it is only used in the Jacks Point Structure Plan.

8. SUMMARY OF RECOMMENDATIONS ON CHAPTER 2:

444. Our recommended amendments to Chapter 2 are set out in Appendix 1 to this Report.
445. In our detailed discussion of the definitions in Chapter 2, and those that might be added to it, we have recommended that Council consider variations to the PDP to insert new/amended definitions of a number of defined terms, as follows:
- a. Community Activity;

²⁰¹ Submission 433

²⁰² GH, MHL, SHL, SMHL

- b. Domestic Livestock/Livestock;
- c. Ground Level;
- d. MASL;
- e. Mineral prospecting
- f. Recession Lines/Recession Plane;
- g. Wholesaling.

446. Attached as Appendix 4 is a suggested basis for an amended definition/explanation of 'Recession Line/Recession Plane' should Council agree with our recommendation that the existing definition would benefit from clarification.
447. 'The need for Council to insert the relevant date into the definition of *'partial demolition'* before release of the Council's decisions on our recommendations is also noted.
448. As previously noted, Appendix 3 to this report contains a summary of our recommendations in relation to each submission before us.

PART D: NATURAL HAZARDS:

9. PRELIMINARY MATTERS

9.1. Background:

449. Both the Operative RPS and the Proposed RPS have a particular focus on management of natural hazards. Given the role of both documents in the decision-making process²⁰³, we need to discuss the direction provided by those documents in some detail.

450. In her Section 42A Report Ms Bowbyes drew our attention to four objectives of the Operative RPS as follows:

11.4.1 *To recognise and understand the significant natural hazards that threaten Otago communities and features.*

11.4.2 *To avoid or mitigate the adverse effects of natural hazards within Otago to acceptable levels.*

11.4.3 *To effectively and efficiently respond to natural hazards occurring within Otago.*

11.4.4 *To avoid, remedy or mitigate the adverse effects of hazard mitigation measures on natural and physical resources.”*

451. Supporting these objectives, Ms Bowbyes drew our attention to the following policies:

“11.5.1 *To recognise and provide for Kai Tahu values in natural hazard planning and mitigation.*

11.5.2 *To take action necessary to avoid or mitigate the unacceptable adverse effect of natural hazards and the responses to natural hazards on:*

- (a) Human life; and*
- (b) Infrastructure and property; and*
- (c) Otago’s natural environment; and*
- (d) Otago’s heritage sites.*

11.5.3 *To restrict development on sites or areas restricted as being prone to significant hazards, unless adequate mitigation can be provided.*

11.5.4 *To avoid or mitigate the adverse effects of natural hazards within Otago through:*

- (a) Analysing Otago’s natural hazards and identifying their location and potential risk; and*
- (b) Promoting and encouraging means to avoid or mitigate natural hazards; and*
- (c) Identifying and providing structures or services to avoid or mitigate the natural hazard; and*
- (d) Promoting and encouraging the use of natural processes where practicable to avoid or mitigate the natural hazard.*

11.5.5 *To provide a response, recovery and restoration capability to natural hazard events through:*

- (a) Providing civil defence capabilities;*

²⁰³ Refer Sections 75(3)(c) and 64(2)(a) of the Act respectively

- (b) *Establishing procedures and responsibility to ensure quick responses to any natural hazard event; and*
- (c) *Identifying agency responsibilities for assisting recovery during and after events; and*
- (d) *Developing recovery measures incorporated into civil defence plans.*

11.5.6 *To establish the level of natural hazard risk that threatened communities are willing to accept, through a consultative process.*

11.5.7 *To encourage and where practicable support community-based responses to natural hazard situations.”*

452. The Proposed RPS provides even more detailed guidance than did its predecessor. Ms Bowbyes drew our attention to Objective 4.1 which reads:

“Risk that natural hazards pose to Otago’s communities are minimised.”

453. This objective is supported by no fewer than 13 policies that we need to have regard to:

*“Policy 4.1.1 Identifying natural hazards
Identify natural hazards that may adversely affect Otago’s communities, including hazards of low likelihood and high consequence by considering all of the following:*

- a) Hazard type and characteristics;*
- b) Multiple and cascading hazards;*
- c) Cumulative effects, including from multiple hazards with different risks;*
- d) Effects of climate change;*
- e) Using the best available information for calculating likelihood;*
- f) Exacerbating factors.*

*Policy 4.1.2 Natural hazard likelihood
Using the best available information, assess the likelihood of natural hazard events occurring, over no less than 100 years.*

*Policy 4.1.3 Natural hazard consequence
Assess the consequences of natural hazard events, by considering all of the following:*

- a) The nature of activities in the area;*
- b) Individual and community vulnerability;*
- c) Impacts on individual and community health and safety;*
- d) Impacts on social, cultural and economic well being;*
- e) Impacts on infrastructure and property, including access and services;*
- f) Risk reduction and hazard mitigation measures;*
- g) Lifeline utilities, essential and emergency services, and their co-dependence;*
- h) Implications for civil defence agencies and emergency services;*
- i) Cumulative effects;*
- j) Factors that may exacerbate a hazard event.*

*Policy 4.1.4 Assessing activities for natural hazard risk:
Assess activities for natural hazard risk to people in communities, by considering all the following:*

- a) *The natural hazard risk identified, including residual risk;*
- b) *Any measures to avoid, remedy or mitigate those risks, including relocation and recovery methods;*
- c) *The longterm viability and affordability of those measures;*
- d) *Flow on effects of the risk to other activities, individuals and communities;*
- e) *The availability of and ability to provide, lifeline utilities, and essential and emergency services, during ‘and’ after a natural hazard event.*

Policy 4.1.5

Natural hazard risk

Manage natural hazard risk to people and communities, with particular regard to all of the following:

- a) *The risk posed, considering the likelihood and consequences of natural hazard events;*
- b) *The implications of residual risk, including the risk remaining after implementing or undertaking risk reduction and hazard mitigation measures;*
- c) *The community’s tolerance of that risk, now and in the future, including the community’s ability and willingness to prepare for and adapt to that risk, and respond to an event;*
- d) *The changing nature of tolerance to risk;*
- e) *Sensitivity of activities to risk.*

Policy 4.1.6

Avoiding increased natural hazard risk

Manage natural hazard risk to people and communities by both:

- a) *Avoiding activities that significantly increase risk including displacement of risk off-site; and*
- b) *Avoiding activities that increase risk in areas potentially affected by coastal hazards over at least the next 100 years.*

Policy 4.1.7

Reducing existing natural hazard risk

Reduce existing natural hazard risk to people and communities, including by all of the following:

- a) *Encouraging activities that:*
 - i. *Reduce risk; or*
 - ii. *Reduce community vulnerability;*
- b) *Discourage activities that:*
 - i. *Increase risk; or*
 - ii. *Increase community vulnerability;*
- c) *Considering the use of exit strategies for areas of significant risk to people and communities;*
- d) *Encouraging design that facilitates:*
 - i. *Recovery from natural hazard events;*
 - ii. *Relocation to areas of lower risk;*
- e) *Relocating lifeline utilities, and facilities for essential and emergency service, to areas of reduced risk, where appropriate and practicable;*
- f) *Enabling development, upgrade, maintenance and operation of lifeline utilities and facilities for essential and emergency services;*
- g) *Reassessing natural hazard risk to people and communities, and community tolerance of that risk, following significant natural hazard events.*

- Policy 4.1.8 Precautionary approach to natural hazard risk
Where natural hazard risk to people and communities is uncertain or unknown, but potentially significant or irreversible, apply a precautionary approach to identifying, assessing and managing that risk.*
- Policy 4.1.9 Protection features and systems that provide hazard mitigation
Avoid, remedy or mitigate adverse effects on natural or modified features and systems, which contribute to mitigating the effects of both natural hazards and climate change.*
- Policy 4.1.10 Mitigating natural hazards
Give preference to risk management approaches that reduce the need of hard protection structures or similar engineering interventions, and provide for hard protection structures only when all of the following apply:*
- a) Those measures are essential to reduce risk to a level the community is able to tolerate;*
 - b) There are no reasonable alternatives;*
 - c) It would not result in an increase in risk to people and communities, including displacement of risk off-site;*
 - d) The adverse effects can be adequately managed;*
 - e) The mitigation is viable in the reasonably foreseeable long term.*
- Policy 4.1.11 Hard protection structures
Enable the location of hard protection structures and similar engineering interventions on public land only when either or both the following apply:*
- a) There is significant public or environmental benefit in doing so;*
 - b) The work relates to the functioning ability of a lifeline utility, or a facility for essential or emergency services.*
- Policy 4.1.12 Lifeline utilities and facilities for essential or emergency services
Locate and design the lifeline utilities and facilities for essential or emergency services to:*
- a) Maintain their ability to function to the fullest extent possible, during and after natural hazard events; and*
 - b) Take into account their operational co-dependence with other lifeline utilities and essential services to ensure their effective operation.*
- Policy 4.1.13 Hazard mitigation measures, lifeline utilities, and essential and emergency services*
- Protect the functional and operational requirements of hazard mitigation measures, lifeline utilities, and essential or emergency services, including by all of the following:*
- a) Restricting the establishment of those activities that may result in reverse sensitivity effects;*
 - b) Avoiding significant adverse effects on those measures, utilities or services;*
 - c) Avoiding, remedying or mitigating other adverse effects on those measures, utilities or services;*
 - d) Maintaining access to those measures, utilities or services for maintenance and operational purposes;*

Managing other activities in a way that does not restrict the ability of those mitigation measures, utilities or services to continue functioning.”

454. Ms Bowbyes also drew our attention to Policy 4.5.1 of the Proposed RPS, that, relevantly reads: “Policy 4.5.1 *Managing for urban growth and development*

Managing urban growth and development in a strategic and co-ordinated way, by all of the following...:

- c) *Identifying future growth areas and managing the subdivision, use and development of rural land outside these areas to achieve all of the following:....*
- v) *Avoid land with significant risk from natural hazards.”*

455. The evidence of Mr Henderson for Otago Regional Council (adopting the pre-circulated Brief of Evidence of Mr Warren Hanley) was that the Proposed RPS had been developed against a background where, to use his words, “*the national importance placed on managing natural hazard risk has increased substantially since Otago’s first RPS became operative*”. Discussing the point with Mr Henderson, he confirmed our impression that it is not a matter of the natural hazard risk having changed materially, but rather one of the perception of that risk having been heightened as a result of very visible hazard events such as the Christchurch and Kaikoura earthquakes. As Mr Henderson observed, in general, hazards have always existed.

456. Be that as it may, the Proposed RPS gives a much greater degree of direction, as well as a much more explicit focus on natural hazard risk. Classically, risk is the combination of the likelihood of an event coming to pass, and its consequence(s)²⁰⁴. The operative RPS, by contrast, appears to focus solely on the consequences of natural hazards.

457. Ms Bowbyes noted in her Section 42A Report²⁰⁵ that the Proposed RPS advocates for a “*more definitive and cautious approach*” with regard to natural hazard risk than that proposed in the notified PDP provisions on natural hazards.

458. Ms Bowbyes, however, noted that as at the date of hearing, the Proposed RPS was the subject of numerous appeals to the Environment Court with almost all of the provisions quoted above the subject of challenge. Ms Bowbyes drew our attention specifically to appeals focussing on the extent to which an avoidance policy is pursued in the Proposed RPS. However, when we discussed the nature and scope of the appeals on the Proposed RPS with counsel for the Council, Ms Scott confirmed our own impression (having reviewed the various notices of appeal that had been filed), that the direction the appeals seek to take the Proposed RPS provisions on natural hazards is not uniform. In particular, while the effect of the appeals Ms Bowbyes drew to our attention might be to reduce the restriction on future development posed by these provisions, if successful, other appeals might push the Proposed RPS provisions in the opposite direction. That is to say, to a more restrictive position. That suggests, among other things, that while remaining true to our statutory obligation to take the Proposed RPS into account, we also need to be alive to the potential for it to change in ways that cannot currently be predicted.

459. Having emphasised the differences between the Operative RPS and the Proposed RPS, it is also appropriate to note the areas of commonality. Specifically, both acknowledge the relevance

²⁰⁴ See *Orica Mining Services New Zealand Limited v Franklin District Council* W032/2009 at [18]

²⁰⁵ At paragraph 5.20

of community opinion, although the language used is different. The Operative RPS speaks in terms of acceptability, whereas the Proposed RPS focuses on tolerability. We asked counsel for the Council whether these were the same thing in a natural hazard context. Her initial response was that the ordinary and natural meanings of the two terms are different. If correct, that would pose somewhat of a conundrum for us. As a matter of law, we are bound to give effect to the Operative RPS and while that does not mean that the PDP must use identical language to the Operative RPS, if there were indeed a meaningful difference between the terminology of the two documents, we would necessarily have to adopt the approach of the Operative RPS.

460. For ourselves, we are not at all sure that counsel's initial response (that there is a difference in the ordinary dictionary meaning) is correct and, having reflected on it, she agreed that if the relevant policies of the Operative RPS substituted "*tolerable*" for "*acceptable*" and "*intolerable*" for "*unacceptable*" in each case, the meaning would not change.
461. That was also the view of Mr Henderson, giving evidence for Otago Regional Council. He thought that they were similar concepts, but supported use of the language in the Proposed RPS because tolerability was now the term used in the planning literature.
462. We accept that there is no material difference between the terminology, and take the view that it is preferable to align the wording of the PDP with the Proposed RPS given that that represents Otago Regional Council's current thinking.
463. We also discussed with Mr Henderson an apparent contradiction in his evidence which stated at one point²⁰⁶ that tolerance for risk might vary from community to community, depending on the nature of the risk profile and the resources of the community to manage it, and at another,²⁰⁷ that he would be concerned if the PDP suggested different criteria for natural hazard risk management might be employed in Queenstown Lakes District to that in the balance of the Otago Region.
464. Mr Henderson sought to reconcile the two positions by stating a general desire that hazard response be "*relatively consistent*" within a range. However, he accepted that where a district has few options to meet development demand, that might drive choices that other districts with a greater range of options might not take. More specifically, Mr Henderson agreed that if Queenstown Lakes District has high demand for development and few choices as to how to accommodate that demand (manifestly an accurate statement of the position) the District's community might make choices as to what natural hazards have to be tolerated, and those choices might be different to another district with lower levels of development demand and greater options as to how demand might be accommodated.
465. We have approached our consideration of submissions and further submissions on Chapter 28 on that basis.
466. We will return to both the Operative RPS and the Proposed RPS provisions in the context of our more detailed discussion of the objectives and policies of Chapter 28 that follows. The last point of general background, however, that we need to note relates to the potential relevance of iwi management plans to our consideration of submissions and further submissions on Chapter 28. As Report 1 notes, any relevant planning document recognised by an iwi authority and lodged with the Council must be taken into account under Section 74(2A) of the Act.

²⁰⁶ Paragraph 22

²⁰⁷ Paragraph 24

467. In her reply evidence, Ms Bowbyes drew our attention to provisions in two such iwi management plans. Specifically, in *“The Cry of the People, Te Tangi Tauria: Ngai Tahu ki Murihiku Natural Resource and Environmental Iwi Management Plan 2008*, Policy 12 of Section 3.1.1. supports development and improvement of contingency measures to recognise increased natural hazard risk, among other things, as a result of unpredictable weather patterns. Ms Bowbyes drew to our attention the link between this policy and the provisions of Chapter 28 relating to flood hazards and recommended changes she had suggested regarding the impacts of climate change.
468. Ms Bowbyes also drew our attention to section 3.5.7 of this Plan emphasising the relevance of natural hazards to determination of the appropriateness of subdivision at particular locations.
469. Secondly, Ms Bowbyes drew our attention general policy 54 in section 5.3.4 of *Kai Tahu ki Otago Natural Resource Management Plan 2005* which has a similar emphasis on aligning land uses to the type of land and climatic conditions.
470. Policy 43 of that document further seeks to discourage activities on riverbanks that have the potential to cause or increase bank erosion. More generally, Policy 10 promotes sustainable land use within the Clutha/Mata-au Catchment, which encompasses the entire district.
471. Ms Bowbyes was of the view that Chapter 28 already accounts for these various provisions in its objectives and policies. We agree with that view, although obviously, any suggested amendments need to be weighed with these provisions in mind, along with the other higher order documents and considerations that have to be factored in.
472. In addition to the matters that are relevant to the decision-making process external to the PDP, our consideration of submissions and further submissions also needs to take account of the recommendations of the Stream 1B Hearing Panel that considered the extent of strategic direction provided in Chapters 3 and 4 relevant to natural hazards.
473. We note in particular, that that Hearing Panel’s recommendation that renumbered Objective 3.2.1 promotes as an outcome that urban development among other things, *“minimise[s] the natural hazard risk, taking into account the predicted effects of climate change”*.
474. We also note recommended Policy 4.2.2.2 which links allocation of land within urban growth boundaries to *“any risk of natural hazards, taking into account the effects of climate change”*.
475. Our ability to respond appropriately to both the legislative directions of the Act and to the direction provided in Chapters 3 and 4 is dependent, of course, on the notified provisions of Chapter 28, and the scope provided for amendment of those provisions by the submissions lodged in accordance with the provisions of the First Schedule. It is therefore, to those detailed provisions that we now turn.

9.2. Natural Hazard Provisions – General Submissions:

476. Ms Bowbyes drew our attention to five submission points regarding the treatment of particular hazards in the PDP²⁰⁸. The first of these submissions is that of J & E Russell and ML Stiassny²⁰⁹ which sought the inclusion of new provisions acknowledging the presence of the Cardrona Gravel Aquifer, including a rule framework for earthworks and residential

²⁰⁸ Refer Section 42A Report at Section 10

²⁰⁹ Submission 42: Opposed by FS1300

development on land potentially affected by the aquifer. Ms Bowbyes confirmed in a discussion with us that the concern the submission is targeting is one of flood hazards.

477. Ms Bowbyes analysed the provisions of the earthworks chapter of the ODP, introduced by way of Plan Change 49. Her view was that those provisions are appropriate to address the matters raised in the submission and that no amendments are necessary to Chapter 28. We agree. To the extent the submitters may have a different view, they will be free to pursue the issue further when the earthworks provisions of the PDP are considered as part of the Stage 2 Variation hearing process. The submitter did not appear before us to take the matter further.
478. The second submission Ms Bowbyes drew to our attention is that of the Glenorchy Community Association Committee²¹⁰ which sought that Otago Regional Council and the Council update the natural hazards database with flooding information on the Bible Stream and remove any flood classification that is incorrect. Ms Bowbyes noted that the natural hazards database is held outside the PDP. We agree that it follows that this submission does not relate to the provisions of the PDP and the submission is accordingly not within the scope of the District Plan review.
479. Next, Ms Bowbyes drew our attention to three submissions relating to fire risk: those of Otago Rural Fire Authority²¹¹ (two submissions) and of Leigh Overton²¹².
480. As regards the first Otago Rural Fire Authority submission, this relates to a request that the PDP permit residents to remove flammable vegetation within the “*priority zones*” identified in a specified homeowners manual to address the high fire danger associated with living in areas such as Mount Iron and the Queenstown Red Zone. Ms Bowbyes clarified that the Red Zone relates to parts of the district where fires and fireworks are strictly prohibited.
481. Ms Bowbyes advised us²¹³ that the possible changes to provisions in the Rural Chapters balancing the need for vegetation retention versus managing fire risk were considered in the context of Hearing Stream 2. Insofar as the flammable vegetation in question is indigenous in nature, these issues overlap with the matters the Stream 2 Hearing Panel has considered in relation to Chapter 33. We believe that the issue is one more properly dealt with in that context. We do not regard it is appropriate that Chapter 28 address it further.
482. The second Rural Fire Authority submission and the submission of Mr Overton, however, are a different category. Both seek greater recognition for identification and mitigation of vegetation fire risk in the planning process. Mr Overton appeared in support of his submission and we think there is merit in some of the points he made. We will return to it in the context of the detailed provisions of Chapter 28.
483. Ms Bowbyes also drew our attention to some 33 submission points from a number of submitters²¹⁴ all expressed in identical terms, and seeking:

“Reconsider the extensive number of hazard related policies, remove unnecessary tautology and ensure they are focussed on significant hazards only.”

²¹⁰ Submission 564

²¹¹ Submission 849

²¹² Submission 465::Supported by FS1125

²¹³ Section 42A Report at 10.17

²¹⁴ Refer Submissions 632, 633, 636, 643, 672, 688, 693, 694, 696, 700, 702 and 724: Supported by FS1097; Opposed by FS1139, FS1191, FS1219, FS1252, FS1275, FS1277, FS1283, FS1316 and FS1319

484. The reasons provided in support of these submissions focus on the extent to which the Council’s hazard database identifies natural hazard risk, and the inefficiency of requiring all resource consents to assess natural hazard risk, irrespective of the nature and scale of that risk. A focus on significant natural hazard risk is suggested as being more practicable
485. Ms Bowbyes discusses the significantly enlarged treatment of natural hazard issues in Chapter 28 compared to the comparable ODP provisions, concluding that the notified suite of policies is both necessary and appropriate. We agree with that assessment. The considerations that have prompted the significantly enlarged treatment of natural hazards in the Proposed RPS apply equally to the PDP. It is also significant that none of the submitters in question appeared to support the generalised criticisms of the Chapter 28 provisions.
486. Considering the third point, Ms Bowbyes drew our attention to the absence of any mapping or classification of the significance of risk that would enable provisions focussing on significant natural hazard risks only to be implemented.
487. It is also material that neither the Operative nor the Proposed RPS focus solely on significant natural hazards and while there is a need to ensure that any requirements to assess natural hazard risk are proportionate to the level of risk, Ms Bowbyes has recommended specific provisions to address that concern.
488. Accordingly, we recommend rejection of these submissions at the very general level at which they are pitched. We will return to the requirements to assess natural hazard risk as part of our more detailed commentary on submissions on the objectives and policies that follows.

10. CHAPTER 28: PROVISION SPECIFIC SUBMISSIONS:

10.1. Section 28.1: Purpose:

489. The sole submission on Section 28.1 was that of Transpower New Zealand Limited²¹⁵ seeking that where the existing text refers to “tolerable” levels and “intolerable” risk, that be substituted with “acceptable” and “unacceptable” respectively. As Ms Bowbyes noted in her Section 42A Report²¹⁶, the reasons given for this submission did not explain the relief sought. Those reasons focus on provision for mitigation of risk, which the suggested amendments would not provide.
490. As discussed earlier, we do not regard the difference in terminology to be material and given that the Proposed RPS focuses on tolerability and intolerability, we believe it preferable to align the PDP with that terminology. In summary, therefore, we recommend that this submission not be accepted.
491. We have, however, identified a minor amendment that might usefully be made to Section 28.1, to aid the reader. This is to explain the role of the chapter given that it has no rules – namely to provide policy guidance on natural hazards that might be considered in the implementation of the rules in other chapters. Appendix 2 shows the suggested amendment. We consider this falls within clause 16(2).

²¹⁵ Submission 805

²¹⁶ At 12.2 and 12.3

10.2. Section 28.2 Natural Hazard Identification:

492. There are two submissions on this section of Chapter 28. The first, that of Otago Regional Council²¹⁷, supported the approach flagged in this section of the Council holding information in a natural hazard's database, outside the District Plan. No amendment was sought.

493. The one amendment sought to the section arises from the Council's Corporate submission²¹⁸ that sought a reference to a likely increase in climate extremes as a result of climate change. Ms Bowbyes recommends acceptance of that submission, albeit slightly reworded, and we agree. The recommended provisions already noted related to natural hazards in both Chapters 3 and 4 acknowledge the relevance of climate change to natural hazard management. In addition, Policy 4.2.2 of the Proposed RPS draws attention to the need to take into account the effects of climate change so as to ensure people in communities are able to adapt to or mitigate its effects.

494. Accordingly, we recommend that the Council's corporate submission be accepted and a new sentence be inserted on the end of the second paragraph of this section as shown in Appendix 2 to this Report.

495. We also recommend that in the list of natural hazards, subsidence be listed separately from alluvion and avulsion with which it has little or nothing in common, other than that they are all ground movements. We consider this a minor change within Clause 16(2).

496. Section 28.2 is also worthy of note by reason of the fact that fire is specifically listed as a relevant natural hazard. We will return to that when we discuss Mr Overton's submission further.

10.3. Objective 28.3.1:

497. There are three objectives in this section of Chapter 28. The first, Objective 28.3.1 read as notified:

"The effects of natural hazards on the community and the built environment are minimised to tolerable levels."

498. In her Section 42A Report, Ms Bowbyes drew our attention to two submissions specifically on this objective. Both sought to amend the reference to minimisation. Thus, QAC²¹⁹ sought that rather than natural hazard effects being minimised to tolerable levels, that they are

"appropriately managed".

499. The Oil Companies²²⁰ suggested retention of a reference to tolerable levels but sought amendment to the objective to state that natural hazard effects *"are avoided, remedied or mitigated"*.

500. The more general submission of Otago Regional Council²²¹ seeking that provisions of the Proposed RPS are reflected in this chapter by provision for avoiding natural hazard risk,

²¹⁷ Submission 798

²¹⁸ Submission 383

²¹⁹ Submission 433: Supported by FS1097 and FS1117

²²⁰ Submission 768

²²¹ Submission 798: Opposed by FS1182

reducing natural hazard risk and applying a precautionary approach to natural hazard risk also needs to be noted.

501. The stated rationale for the Oil Companies' submission was that 'minimise' means to reduce to the smallest level (of effect) possible, when the intention is to address effects to tolerable levels, which may or may not be the same thing. Ms Bowbyes records that the QAC submission did not provide any specific rationale for removing the term "*minimise*" other than a general statement that the notified provisions are too vague and require greater clarity and certainty. QAC did, however, comment in its submission regarding a focus on tolerance, suggesting that it is difficult to quantify and depends on the circumstances.
502. Ms Bowbyes recommended in response to those submissions that the objective be amended to refer to natural hazard risk rather than effects (for consistency within the chapter and with the Proposed RPS) and that rather than minimising risk, it "*is avoided or managed to a tolerable level*".
503. For our part, we think that the Oil Companies' submission has a point. Minimisation of risk is an outcome in itself and adding reference to what is or is not tolerable blurs the picture, because they are not necessarily the same thing. A tolerable level of risk may be somewhat greater than the minimum level of risk. Similarly, the minimum achievable level of risk may still be intolerable.
504. We found the stated rationale for the QAC submission somewhat ironic, because substituting reference to appropriate management without any indication as to what that might involve would, in our view, reduce certainty and clarity rather than improve it.
505. We did have some concerns, however, how in practice an objective focussing on tolerable levels would be applied. Among other things, tolerable to whom?
506. Because the concept of tolerability originates from the Proposed RPS, we sought to discuss these matters with Mr Henderson. His evidence was that reference to tolerability related to the community's view, as expressed primarily through the zoning of particular land. He acknowledged that there are issues about the reliability of any assessment of community tolerance obtained through the resource consent process given that the ability to make submission is not a reliable guide to community opinion, and neither Council staff nor Commissioners hearing and determining applications could purport as a matter of fact to represent the views of the community at large.
507. Ms Bowbyes also addressed this point in her reply evidence. Her view was that the person tasked with issuing a consent under delegated authority is representing the community's views in the Council's capacity as a decision-maker under the RMA. While as a matter of constitutional law, that may be the case, it does not solve the problem to us of how an individual decision-maker can satisfy themselves as to what is or is not tolerated by the community. Ms Bowbyes posed the example of flooding risk in the Queenstown town centre as well known and tolerated risk. We don't disagree about that specific risk. The lurking concern we have is with the application of the objectives and policies focussing on tolerability in less well known and obvious cases. We wonder, for instance, whether some risks are tolerated, because they are not known and/or well understood²²²

²²² Compare the risks of building on liquefaction prone land in eastern Christchurch prior to 2010.

508. Ultimately, we think the best answer was the one that Mr Henderson gave us, that tolerability has to be determined in the zoning applied to land, which will necessarily occur through a public process in which the community has the opportunity to participate.
509. Given Mr Henderson’s evidence, however, we think it is important to be clear that the tolerability referred to in this objective relates to what is tolerable to the community, as opposed to what individual landowners might tolerate (particularly where those landowners are effectively making choices for their successors in title). To that extent, we accept QAC’s submission. An amendment to that effect would mean, however, two references in the same objective to the “community”. To improve the English without changing the meaning, we suggest the first reference be to “people”.
510. We agree with Ms Bowbyes that management of natural hazards does not lend itself to remediation as an option (as the Oil Companies suggest). While, as Ms Bowbyes identified, Section 31 of the Act includes the avoidance or mitigation of natural hazards as a council function we also think that inserting reference to avoidance or mitigation in this context raises similar issues to those raised by the Oil Companies. If the natural hazard risk is tolerable, neither avoidance nor mitigation may be required.
511. We consider the answer to that concern is to substitute “managed” for “minimised”. Certainty is provided by continued reference to what is tolerable. We think that that can be sharpened further by referring to what is tolerable to the community.
512. We agree, however, that the reference point should be natural hazard “risk” given the consistent approach of the Proposed RPS. We consider that the Otago Regional Council’s submission noted above provides jurisdiction for an amendment to that effect. Ms Bowbyes considered that Policy 28.3.2.3 already gave effect to the emphasis in the Proposed RPS on the precautionary principle, because it put the onus on the applicant to produce an adequate assessment of hazard risk. We agree and note that the evidence for the Regional Council did not advance the point as an outstanding issue.
513. In summary, therefore, we recommend that the objective be amended to read:
- “The risk to people and the built environment posed by natural hazards is managed to a level tolerable to the community”.*
514. We consider that of the alternatives available to us, this formulation most appropriately achieves the purpose of the Act.
- 10.4. **Policy 28.3.1.1**
515. As notified, this read:
- 28.3.1.1 Policy
Ensure assets or infrastructure are constructed and located so as to avoid or mitigate the potential risk of damage to human life, property, infrastructure networks and other parts of the environment.
516. Ms Bowbyes drew our attention to four submissions on this policy:
- a. QAC²²³ sought specific reference to the adverse effects of natural hazards;

²²³ Submission 433: Supported by FS1097; Opposed by FS1117

- b. NZTA²²⁴ sought insertion of a practicability qualification on the operation of the policy;
 - c. Transpower New Zealand Limited²²⁵ sought an enlarged practicability qualification that also acknowledges the requirements of regionally significant infrastructure;
 - d. Queenstown Park Limited²²⁶ sought either deletion of reference to “*other parts of the environment*” or better definition of what parts were being referred to.
517. Ms Bowbyes did not recommend acceptance of the QAC submission. We agree with that position. While the submission is understandable given the form in which Objective 28.3.1 was notified, our recommended amendment to that objective would mean that amending the policy to refer to the effects of natural hazards would now be out of step with it.
518. We discussed with Ms Bowbyes, however, whether there needed to be some reference to natural hazards in the policy, given the context. Otherwise the policy might be read more widely than intended. In her reply evidence, she agreed that it would be desirable to be clear that it is natural hazard risk that is being referred to. We concur. To that extent therefore, we accept QAC’s submission.
519. Ms Bowbyes accepted a point made by Mr Tim Williams on behalf of Queenstown Park Limited that reference in the notified policy to “*damage*” to human life was somewhat inapt, prompting a need to reconfigure the form of the policy to separate out risks to human life from other risks.
520. However, we think that some tweaking of the language is required to make it clear that the focus is on construction and location of assets and infrastructure to avoid exacerbating natural hazard risk to human life. The reality is that natural hazards pose an existing risk to human life and the focus needs to be on management of activities that increase that risk²²⁷.
521. Ms Bowbyes recommended also acceptance of the relief sought by Transpower (and consequently the more limited relief of NZTA). In her view, the importance of regionally significant infrastructure meant that recognition of the limitations it operates under was appropriate. We agree. While it is probably not strictly necessary to make specific reference to the locational, technical and operational requirements of regionally significant infrastructure if a general practicability qualification is inserted (those requirements are on one view just examples of why it may not be practicable to avoid or mitigate a potential hazard risk), the role of regionally significant infrastructure means that it is worth being clear that that is the policy intent
522. However, we have some issues with framing that recognition in terms of an acknowledgement, because of the lack of clarity as to what that means. We think that it would be more clearly expressed if it referred to consideration of those requirements.
523. Ms Bowbyes also recommended acceptance of the Queenstown Park Limited submission on the basis that the generalised reference to “*other parts*” of the environment lacks definition and creates uncertainty. We agree with that position also.

²²⁴ Submission 719: Supported by FS1097, FS1341 and FS1342

²²⁵ Submission 805

²²⁶ Submission 806

²²⁷ Compare Policy 4.1.6 of the Proposed RPS

524. In summary, we largely accept Ms Bowbyes' recommendations with amendments to address the points made above. The end result is, therefore, that we recommend that Policy 28.3.1.1 be amended to read:

"Ensure assets or infrastructure are constructed and located so as to avoid or mitigate:

- a. The potential for natural hazard risk to human life to be exacerbated; and*
- b. The potential risk of damage to property and infrastructure networks from natural hazards to the extent practicable, including consideration of the locational, technical and operational requirements of regionally significant infrastructure."*

10.5. Policy 28.3.1.2

525. As notified, this read:

28.3.1.2 Policy

Restrict the establishment of activities which have the potential to increase natural hazard risk, or may have an impact on the community and built environment.

526. Ms Bowbyes drew our attention to five submissions on this policy, as follows:

- a. Real Journeys Limited²²⁸, Cook Adam Trustees Limited, C&M Burgess²²⁹, and Bobs Cove Developments Limited²³⁰ who all sought qualification of the level of risk (to refer to "significant natural hazard risk") and linking of the second part of the policy so that it relates to the first part, rather than establishes a separate and discrete restriction;
- b. The Oil Companies²³¹ sought deletion of reference to potential risks (so the policy would refer to actual increases in risk) and insertion of reference to tolerability as a criterion for both natural hazard risk increases and impacts on the community.

527. Queenstown Park Limited²³² sought qualification of a second half of the policy so it relates to "adverse and significant" impacts.

528. Addressing the first submission point, Ms Bowbyes noted that the approach of the Proposed RPS at Policy 4.1.6 is to focus on significant increases in natural hazard risk and, accordingly, she recommended qualification of the policy in the manner sought. That suggestion also addresses the first part of the Oil Companies' submission, although we do not consider the deletion of reference to potential increases in natural hazard risk to be material given that, as discussed above, natural hazard risk inherently incorporates concepts of probability/likelihood within it.

529. Ms Bowbyes also recommended acceptance of the second part of the relief sought by the Oil Companies by inserting an intolerability criterion for impacts on the community and the built environment, on the basis that this would increase alignment with the Proposed RPS. We agree with both points. We also note that the wording suggested by the Oil Companies would create the linkage between the two aspects of the policy that the submissions of Real Journeys and others sought.

530. We think that this is preferable to the relief sought by Queenstown Park Limited, which sought to limit the extent of the restriction the second half of the policy creates. We note that

²²⁸ Submission 621

²²⁹ Submission 669

²³⁰ Submission 712

²³¹ Submission 768: Supported by FS1287

²³² Submission 806

although Queenstown Park Limited appeared before us, the evidence of Mr Tim Williams did not address this policy or take issue with the relief recommended by Ms Bowbyes.

531. Accordingly, we recommend that Policy 28.3.1.2 be amended to read:

“Restrict the establishment of activities which significantly increase natural hazard risk, including where they will have an intolerable impact upon the community and built environment.”

10.6. Policy 28.3.1.3:

532. As notified, this policy read:

“Recognise that some areas that are already developed are now known to be at risk from natural hazards and minimise such risk as far as possible while acknowledging that landowners may be prepared to accept a level of risk.”

533. The only submission seeking a material change to this policy was that of the Oil Companies²³³ who sought that reference be inserted to “the effects” of natural hazards and substitution of a practicability test for what is “possible”.

534. Ms Bowbyes supported the suggested amendment to refer to practicable minimisation of risk to avoid any unintended implication that risk has to be reduced to the point where it is negligible. We agree with her reasoning in that regard.

535. Ms Bowbyes recommended that rather than refer to the effects of natural hazards, as the Oil Companies sought, the initial reference to risk be redrafted. We agree that her suggested rewording is an improvement, as well as being consistent with the recommended objective.

536. Responding to the evidence of Mr Henderson for Otago Regional Council, Ms Bowbyes also recommended that the policy should refer to what the community is prepared to accept, rather than what landowners are prepared to accept. This is consistent with the discussion we had with Mr Henderson, referred to above. We agree with Mr Henderson’s essential point, that it is inappropriate to rely on an existing landowner’s readiness to accept natural hazard risks on behalf of their successors in title. We note that while Otago Regional Council did not seek amendment of this Policy specifically, it did state a clear position that it is not appropriate to have new development occurring where natural hazard risks are intolerable to the community. We therefore regard the suggested amendment as being within scope but, consistent with the general desire to promote alignment of language with the Proposed RPS, we recommend that that policy talk in terms of what the community will tolerate, rather than what it will accept.

537. In summary, therefore, we recommend that Policy 28.3.1.3 be revised to read:

“Recognise that some areas that are already developed are now known to be subject to natural hazard risk and minimise such risk as far as practicable while acknowledging that the community may be prepared to tolerate a level of risk.”

10.7. Policy 28.3.1.4,

538. As notified, this policy read:

²³³ Submission 768: Supported by FS1287

“Allow Public Bodies exercising their statutory powers to carry out natural hazard mitigation activities.”

539. The only submission on this policy was from Queenstown Park Limited²³⁴, which sought that reference to “*Public Bodies*” be limited to the Regional and District Council and that the Policy be qualified to acknowledge the need to mitigate potential adverse effects resulting from hazard protection works. Ms Bowbyes recommended acceptance of both aspects of the submission. In her view, referring specifically to the Regional and District Council provided greater clarity and certainty, and that it was appropriate to acknowledge adverse effects that might result from hazard protection works. She also recommended replacing the word “*allow*” with “*enable*”, as more accurately articulating the role of the District Plan. She considered that to be a minor non-substantive change (and therefore within Clause 16(2)).
540. We were somewhat puzzled by the intent of this policy. At one level, if a public body is exercising a statutory power to undertake natural hazard mitigation activities, particularly in an emergency situation, the provisions of the District Plan are largely academic.
541. We also wondered about the restriction of the ambit of the policy, from initially referring to public bodies, to referring only to the Regional and District Council. We disagree with Ms Bowbyes’ comment²³⁵ that the ambit of the term “*public body*” is unclear and we were concerned that organisations like the Fire Service Commission and the Director of Civil Defence Emergency Management have important roles in managing civil defence emergencies that ought to be acknowledged.
542. Having reflected on our queries, Ms Bowbyes advised in her reply evidence²³⁶ that the intent of the Policy is to address planned mitigation works undertaken by the Regional and District Councils that require a resource consent, rather than emergency mitigation works. This was helpful, because if the focus is on planned hazard mitigation works, there is then a ready case for limiting the parties who may be involved to just the Regional and District Council (as Queenstown Park Ltd suggests). Amending the policy, as Ms Bowbyes suggests, to ‘enabling’ the Councils to undertake activities also reinforces the point that this is in the context of resource consent applications for such works. However, Ms Bowbyes continued to recommend reference to “*natural hazard mitigation activities*” which would capture both emergency and unplanned works. We think the policy intent, as explained to us, needs to be expressed more clearly.
543. We also think that rather than a generalised reference to “*the Regional and District Council*”, Otago Regional Council should be referred to in full (there being no other relevant Regional Council) and the defined term for the District Council be used.
544. In summary, therefore, we agree with Ms Bowbyes’ suggestions and recommend that policy 28.3.1.4 be amended to read:

“Enable Otago Regional Council and the Council exercising their statutory powers to undertake permanent physical works for the purposes of natural hazard mitigation while recognising the need to mitigate potential adverse effects that may result from those works.”

²³⁴ Submission 806

²³⁵ Section 42A Report at 12.36

²³⁶ At 7.1

545. We note that the only submission on Policy 28.3.1.5 was from the Oil Companies²³⁷, seeking that it be retained without further modification. However, it is evident to us that this policy is now entirely subsumed within Policy 28.3.1.3 as we have recommended it be amended. We therefore recommend it be deleted as a minor non-substantive change.
546. Having reviewed the policies in Section 28.3.1 collectively, we consider that with the amendments set out above and given the alternatives open to us, the resulting policies are the most appropriate means to achieve Objective 28.3.1.

10.8. Objective 28.3.2

547. Turning to Objective 28.3.2, as notified, it read:
“Development on land subject to natural hazards only occurs where the risks to the community and the built environment are avoided or appropriately managed or mitigated.”
548. Ms Bowbyes drew our attention to four submissions on this objective. The first three (Real Journeys Limited²³⁸, Cook Adam Trustees Limited, C&M Burgess²³⁹ and Bobs Cove Developments Limited²⁴⁰) all sought that the objective refer to *“a significant natural hazard”* and that it provide that risks are *“satisfactorily avoided”*.
549. Queenstown Park Limited²⁴¹ sought that the objective be replaced with Objective 4.8.3 of the ODP which reads:
“Avoid or mitigate loss of life, damage to assets or infrastructure, or disruption to the community of the District, from natural hazards.”
550. Ms Bowbyes considered Objective 28.3.2 an improvement on the ODP objective that Queenstown Park Limited’s submission sought to substitute, partly because of the former’s focus on natural hazard risk and partly because of the lack of clarity as to what the term *“disruption”* meant in the context of the ODP objective. We agree and note that when Queenstown Park Limited appeared before us, its planning witness, Mr Tim Williams, generally supported the existing wording of the objective.
551. Ms Bowbyes likewise did not support qualification of the reference to natural hazards, so that the objective would refer only to development on land the subject of a significant natural hazard. She pointed to the lack of evidential support for the submission and the lack of clarity as to what significant natural hazards encompass. She also suggested that limiting the objective to significant natural hazards would leave both the objective and underlying policies silent on the treatment of proposals subject to lower levels of natural hazard risk. We agree with these points. While there is merit in the observation in Submissions 669 and 712 that large areas in the District²⁴² are subject to some recorded natural hazard risk, the objective is framed sufficiently broadly to avoid overly restrictive policies applying to areas of low hazard risk.
552. Ms Bowbyes did recommend an amendment to delete the *“or mitigated”* from the end of the objective, accepting in this regard Mr Tim Williams evidence that *“management”* would

²³⁷ Submission 768

²³⁸ Submission 621

²³⁹ Submission 669

²⁴⁰ Submission 712

²⁴¹ Submission 806

²⁴² It may be, given the proximity of the Alpine Fault, as well as other localised earthquake faults, that the whole District would fall within that general description

necessarily include mitigation. While we agree the notified wording is clumsy, this suggested amendment prompted us to discuss with Mr Williams whether “avoidance” of hazard risk would similarly be an aspect of risk management. Mr Williams had reservations about the extent of overlap. In his view, reference to management of risk had implications of enabling the activity in question and he also thought that tolerability had to be considered. Having said that, he agreed that so long as the word “appropriate” was retained, that would enable those considerations to be brought to the fore.

553. Ms Bowbyes agreed with Mr Williams suggestions in her reply evidence. She expressed the opinion that *“avoidance is absolute whereas management provides flexibility for a range of options to be considered, including mitigation”*.
554. We do not disagree. Indeed, it is precisely because of the absolute nature of an avoidance objective that the suggestion that it be qualified to refer to risks being *“satisfactorily avoided”* is something of a contradiction in terms to us.
555. Stepping back, precisely because the initial reference to natural hazards has such wide application, the outcome sought similarly needs to be flexible. In addition, while we think that Mr Williams may well be right that talking about managing an activity implies that it may occur, the focus of the objective is on the management of risks and we think that the objective should be expressed more simply to say that, leaving it to the policies to flesh out what appropriate management entails. This provides less direction as to the outcome sought than we would normally regard as desirable, but the breadth of the subject matter (and the ambit of the submissions on it) leaves us with little alternative in our view.
556. In summary, we consider that the most appropriate objective to achieve the purpose of the Act in this context given the alternatives open to us, is:

“Development on land subject to natural hazards only occurs where the risks to the community and the built environment are appropriately managed.”

10.9. Policy 28.3.2.1:

557. As notified, Policy 28.3.2.1 stated:

28.3.2.1 Policy

Seek to avoid intolerable natural hazard risk, acknowledging that this will not always be practicable in developed urban areas.”

558. This policy was the subject of three submissions:
- a. QAC²⁴³ sought that it should be expressed more simply: *“Avoid significant natural hazard risk, acknowledging that this will not always be practicable in developed urban areas.”*
 - b. The Oil Companies²⁴⁴ sought that reference be to intolerable effects from natural hazards and that the acknowledgement apply to all developed areas, not just urban areas.
 - c. Otago Regional Council²⁴⁵ opposed the policy insofar as it left open the possibility for development in areas of intolerable hazard risk.

²⁴³ Submission 433: Supported by FS1097 and FS1117

²⁴⁴ Submission 768: Supported by FS1287

²⁴⁵ Submission 798

559. In her Section 42A Report, Ms Bowbyes drew attention to Proposed RPS Policies 4.1.6 and 4.5.1 quoted above, that seek variously avoidance of activities that significantly increase risk and avoidance of development on land with a significant natural hazard risk. In her view, these provisions supported QACs submission that reference should be to significant natural hazard risk, rather than intolerable risk. We agree that it is desirable for this policy to flesh out what might be considered an intolerable risk rather than leaving that for future decisionmakers to determine, with limited ability to ascertain the community's views. She also expressed the view that there was merit in the Oil Companies' argument that the focus should not just be on urban areas.
560. The evidence for Otago Regional Council suggested that the Policy was trying to be "*all things to all situations*" and that the focus should be on significant increases in risk. Mr Henderson suggested that if that were accepted, the acknowledgement in the second half of the policy might then be deleted. Mr Henderson's evidence reflected the general submission for Otago Regional Council already noted that new development should not occur where natural hazard risks are intolerable for the community, even if managed or mitigated.
561. Ms Bowbyes recommended acceptance of Mr Henderson's position.
562. We agree that this is a practicable way forward. The Oil Companies²⁴⁶ make the valid point that major natural hazards (like an earthquake along the Alpine fault) cannot be prevented at source. Similarly, to the extent that there is already a significant natural hazard risk in developed areas, that risk might be mitigated, but it is difficult to imagine how it can be avoided, whereas clearly choices are able to be made when new development is proposed in areas of significant natural hazard risk.
563. In summary, while the end result overlaps with recommended Policy 28.3.1.2, we recommend that Policy 28.3.2.1 be amended to the form suggested by Ms Bowbyes:
'Avoid significantly increasing natural hazard risk.'

10.10. Policy 28.3.2.2

564. As notified this policy read:
Allow subdivision and development of land subject to natural hazards where the proposed activity does not:
- *Accelerate or worsen the natural hazard and/or its potential impacts;*
 - *Expose vulnerable activities to intolerable natural hazard risk;*
 - *Create an unacceptable risk to human life;*
 - *Increase the natural hazard risk to other properties;*
 - *Require additional works and costs that would be borne by the community.*
565. Ms Bowbyes drew our attention to the following submissions on this policy:
- a. The Oil Companies²⁴⁷ sought that the first word of the policy be "*enable*", that the first bullet point refer to risks associated with the natural hazard and/or its potential impacts, the second bullet point refer to the consequences from natural hazards rather than natural hazard risk and that the fourth bullet point refer to an unacceptable level of natural hazard risk;

²⁴⁶ Refer the tabled evidence of Mr Laurenson

²⁴⁷ Submission 768: Supported by FS1287

- b. Real Journey’s Limited²⁴⁸, Cook Adam Trustees Limited, C&M Burgess²⁴⁹ and Bobs Cove Developments Limited²⁵⁰ sought that the initial reference be to land subject to “significant” natural hazards, the word “it” be substituted for “the proposed activity”, the first bullet point refer to natural hazard risk and delete reference to potential impacts, the fourth bullet point be deleted, and the fifth bullet point refer to the “public” rather than the “community”.
- c. Queenstown Park Limited²⁵¹ sought that the first bullet point refer to acceleration of hazards and impacts “to an unacceptable level” and the fourth bullet point refer to increases in natural hazard risk “to an intolerable level”.

566. In her Section 42A Report, Ms Bowbyes agreed with many of these suggestions. She did not, however, accept that reference should be made to significant natural hazards in the opening line of the policy, for the reasons discussed above²⁵². Similarly, she did not agree with the suggestion that the fourth bullet point, related to increasing risk to other properties be deleted, referring us to Proposed RPS Policies 4.1.6 and 4.1.10(c) that focus on displacement of risk off-site. We agree with her reasoning on both points. We note, in particular, that focussing the policy on significant natural hazards would leave a policy gap where land is subject to non-significant natural hazards, which is the very situation it needs to address.

567. As regards Ms Bowbyes’ recommendations that the balance of the submissions be accepted (subject to rewording the addition to the fourth bullet to refer to “intolerable” levels, for consistency with the Proposed RPS), we had a concern about this policy adopting an overtly enabling focus because it is necessarily limited in scope to natural hazard issues. There may be many other non-hazard related issues that mean that an enabling approach is not appropriate.

568. In her reply evidence Ms Bowbyes expressed the view, having reflected on the point, that an enabling policy in this context would not prevail over more restrictive policies in other chapters addressing those other issues. While we agree that that would be the sensible outcome, we are reluctant to leave the point open for an enthusiastic applicant to test. In any event, Ms Bowbyes agreed that an enabling focus in Policy 28.3.2.2 would leave gap between that and policy 28.3.2.1. She therefore recommended that it would be preferable to commence the policy “not preclude...”, as we had suggested to her.

569. We are therefore happy to adopt her reasoning. Accordingly, we recommend that Policy 28.3.2.2 be amended to read:

- 28.3.2.2. *“Not preclude subdivision and development of land subject to natural hazards where the proposed activity does not:*
- a. Accelerate or worsen the natural hazard risk to an intolerable level;*
 - b. Expose vulnerable activities to intolerable natural hazard risk;*
 - c. Create an intolerable risk to human life;*
 - d. Increase the natural hazard risk to other properties to an intolerable level;*
 - e. Require additional works and costs, including remedial works, that would be borne by the public.”*

²⁴⁹ Submission 669

²⁵⁰ Submission 712

²⁵¹ Submission 806

²⁵² Refer Sections 10.5 and 10.9 above

10.11. Policy 28.3.2.3

570. As notified, this policy read:

“Ensure all proposals to subdivide or develop land that is subject to natural hazards provide an assessment covering:

- *The time, frequency and scale of the natural hazards;*
- *The type of activity being undertaken and its vulnerability to natural hazards;*
- *The effects of a natural hazard event on the subject land;*
- *The potential for the activity to exacerbate natural hazard risk both in and off the subject land;*
- *The potential for any structures on the subject land to be relocated;*
- *The design and construction of buildings and structures to mitigate the effects of natural hazards, such as the raising of floor levels;*
- *Site layout and management to avoid the adverse effects of natural hazards, including access and egress during a hazard event.”*

571. Ms Bowbyes noted the following specific submissions:

- a. Queenstown Park Limited²⁵³ sought an amendment to recognise that the level of assessment should be commensurate with the level of potential risk.
- b. The Oil Companies²⁵⁴ sought that the last bullet point be amended to provide for management and mitigation (rather than avoidance) and a criterion referring to a tolerable level of risk. This submission also sought a minor grammatical change;
- c. Real Journeys Limited²⁵⁵, Cook Adam Trustees Limited, C&M Burgess²⁵⁶ and Bob’s Cove Developments Limited²⁵⁷ suggested a range of amendments, which would result in the Policy reading as follows:

“Ensure new subdivision or land development at threat from a significant natural hazard risk (identified on the District Plan Maps) is assessed in terms of:

- a. *The type, frequency and scale of the natural hazard and the effects of a natural hazard event on the subject land;*
 - b. *The vulnerability of the activity in relation to the natural hazard;*
 - c. *The potential for the activity to exacerbate the natural hazard risk;*
 - d. *The location, design and construction of buildings and structures to mitigate the effects of natural hazards;*
 - e. *Management techniques that avoid or minimise the adverse effects of natural hazards.”*
- d. Otago Regional Council²⁵⁸ sought amendment to recognise that development in hazard areas had ongoing management costs that should not be met by the community;

572. Ms Bowbyes agreed with the suggestion of the Oil Companies that the policy provide for a varying standard of assessment. We agree that if, as we accept, the net should be spread wider than significant natural hazards, the extent of the assessment needs to be flexible to ensure that the costs and benefits of the requirement are properly aligned.

573. It follows that like Ms Bowbyes, we do not accept the submissions of Real Journeys Ltd and others seeking that the only natural hazards assessed are those significant natural hazards noted on the planning maps.

²⁵³ Submission 806

²⁵⁴ Submission 768: Supported by FS1287

²⁵⁵ Submission 621

²⁵⁶ Submission 669

²⁵⁷ Submission 712

²⁵⁸ Submission 798

574. Quite apart from the considerations already discussed regarding similar requests in relation to other policies, if accepted, that would gut the policy of any effect unless and until the planning maps had been varied to identify such hazards.
575. We also agree with Ms Bowbyes that effects beyond the subject site need to be addressed, consistent with the focus of the Proposed RPS on displacement of hazard risk off-site and that the previous policy (28.3.2.2.) already addresses the Regional Council's point.
576. Ms Bowbyes recommended we accept most of the balance of submitters' suggestions. We agree that they improve the clarity and expression of the policy.
577. Ms Bowbyes also recommended additional bullet points inserted to refer to a 100 year time horizon, consistent with the Proposed RPS (thereby responding to the more general submission of Otago Regional Council) and to the effects of climate change, to make it clear that natural hazard assessment is prospective and should not just rely on historical hazard data. We agree with both suggestions. While, as Ms Bowbyes noted in discussions with us, the existing reference to frequency and scale of natural hazards should pick up changes in hazard risk over time resulting from climate change (and for that reason, this is not a substantive change), this is a case where in our view, it is wise to explicitly acknowledge the likelihood that climatic extremes will increase with climate change (as sought in the Council's Corporate submission²⁵⁹, albeit in another context).
578. Lastly, in relation to this policy, we should note the evidence of Mr Overton in relation to management of fire risk. Mr Overton advised us that there are areas of the district that are subject to fire risk and that are inaccessible to emergency services. We agree that this is a concern that requires assessment in future. Accordingly, we recommend amendment to the final bullet point to refer to ingress and egress of both residents and emergency services.
579. Given the breadth of Policy 28.3.2.3, however, and the fact that (unlike the ODP) the PDP clearly classifies fire as a natural hazard, we do not consider that fire risk needs more explicit reference either in this policy or elsewhere²⁶⁰.
580. We do note, however, Ms Bowbyes' advice in her reply evidence that Council's Natural Hazard Database does not currently record areas of known vegetation fire risk, and that it needs to do so. We agree, and draw the point to Council's attention for action if it deems appropriate.
581. In summary, we recommend that Policy 28.3.2.3 be amended to read:
- “Ensure all proposals to subdivide or develop land that is subject to natural hazard risk provide an assessment that meets the following information requirements, ensuring that the level of detail of the assessment is commensurate with the level of natural hazard risk:*
- a. The likelihood of the natural hazard event occurring over no less than a 100 year period;*
 - b. The type and scale of the natural hazard and the effects of a natural hazard on the subject land;*
 - c. The effects of climate change on the frequency and scale of the natural hazard;*
 - d. The vulnerability of the activity in relation to the natural hazard;*
 - e. The potential for the activity to exacerbate the natural hazard risk both within and beyond the subject land;*
 - f. The potential for any structures on the subject land to be relocated;*

²⁵⁹ Submission 383

²⁶⁰ Refer the submissions of Mr Overton and of Otago Rural Fire Authority discussed at Section 9.2 above

- g. *The location, design and construction of buildings and structures to mitigate the effects of natural hazards, such as the raising of floor levels.*
- h. *Management techniques that avoid or manage natural hazard risk to a tolerable level, including with respect of ingress and egress of both residents and emergency services during a natural hazard event."*

10.12. Policy 28.3.2.4:

582. As notified, this policy read:

28.3.2.4 Policy

"Promote the use of natural features, buffers and appropriate risk management approaches in preference to hard engineering solutions in mitigating natural hazard risk."

583. Ms Bowbyes noted the submission of the Oil Companies²⁶¹ on this point, seeking deletion of this policy. The submitters suggest that the policy might have unintended consequences for mitigation measures that are widely employed across the District and which, in the submitters view, should be supported. Ms Bowbyes did not support deletion of the policy. As she observed in her Section 42A Report²⁶² the policy promotes alternatives to hard engineering solutions. It does not require them. She suggested a minor amendment to make that clearer, so that the policy would commence *"where practicable, promote...."*. We note Mr Laurenson's support for that suggested change in his tabled statement for the submitters.

584. The evidence of Mr Henderson for Otago Regional Council was that this policy is not consistent with Proposed RPS Policy 4.1.10, which is much more directive regarding the circumstances in which hard protection structures might be provided for. Ms Bowbyes could not, however, find any scope to recommend this change, which would (as she observed) have the opposite effect to the relief sought by the only submitters on the policy. We asked Mr Henderson whether he could point to any submission either by Otago Regional Council, or any other party, that would support greater alignment with the Proposed RPS in this regard and he could not.

585. We consider, therefore, that Ms Bowbyes is correct, and there is no jurisdiction to move this aspect of Chapter 28 into line with the Proposed RPS. In the event that Policy 4.1.10 of the Proposed RPS remains substantively in the same form as at present, the Council would necessarily have to consider a variation to the Plan to incorporate and thereby implement the Proposed RPS, once operative.

586. In the interim, we agree with Ms Bowbyes recommended amendment, accepting the Oil Companies' submission in part. Appendix 2 reflects that change.

10.13. Policy 28.3.2.5:

587. As notified, this policy read:

"Recognise that some infrastructure will need to be located on land subject to natural hazard risk."

588. The only submissions on this policy sought its retention. However, the notified policy has been overtaken by the amendments we have recommended to Policy 28.3.1.1, which provide more explicit recognition of the impracticality of avoiding location of all activities on land subject to natural hazard risk, particularly regionally significant infrastructure. Accordingly, we

²⁶¹ Submission 768

²⁶² At 12.65

recommend that Policy 28.3.2.5 be deleted, as a consequential change, to avoid any confusion as between the role of the two policies.

589. Having reviewed the policies in Section 28.3.2 collectively, taking account of the alternatives open to us and the policies recommended in Section 28.3.1, we consider that those policies are the most appropriate means to achieve Objective 28.3.2.

10.14. Objective 28.3.3. and Policies supporting it

590. Objective 28.3.3. was not the subject of any submission seeking it be changed, and Ms Bowbyes did not recommend any amendment to it. We need consider it no further. She did, however, recommend an amendment to Policy 28.3.3.1. As notified, that policy read:

28.3.3.1 Policy

Continually develop and refine a natural hazards database in conjunction with the Otago Regional Council, (as a basis for Council decisions on resource consent applications or plan changes and for the assessment of building consents).

591. The Oil Companies²⁶³ sought deletion of this policy on the basis that the ongoing changes to the natural hazards database will have statutory effect and, consequentially, should be undertaken by way of Plan Change.

592. The Oil Companies also suggested that the database should not itself be a basis for decision, but should rather be a consideration of the decision-making process.

593. Ms Bowbyes agreed with the last point. As she noted, the role of the database is to provide an initial flag for the presence of a natural hazard which is then the subject of assessment under Policy 28.3.2.3. She therefore thought it was more appropriate to refer to the database as a consideration in the decision-making process.

594. We agree, and consider that such an amendment also better reflects the role of the database sitting outside the District Plan. Further, Ms Bowbyes advised us in her reply evidence that there is no process currently in place that provides a formal avenue for the public to influence the information uploaded to the database. She also noted that the information requirements of notified Section 28.5 highlighted that the database contains information that has been developed at different scales and advises Plan users that further detailed analysis may be required. Again, this supports a much less formal role for the database in the decision making process.

595. Having said that, we think it is valuable that the Council can signal that the database is the subject of continual development and refinement, that being a course of action within its control.

596. We note, however, that there are actually two elements to this policy. The first relates to the Council's actions developing and refining the database. The second point relates to how the database will be used by Council. We think it would be clearer if these two elements were separated into two policies. We also consider that reference to the assessment of building consents should be deleted. This occurs under separate legislation (the Building Act 2004) and the PDP should not purport to constrain how the powers conferred by that legislation will be

²⁶³ Submission 768

exercised. Given the Oil Companies sought deletion of the policy, deletion of this aspect is clearly within scope.

597. We therefore recommend that Policy 28.3.3.1 be separated into two policies and amended to read:

“Continually develop and refine a natural hazards database in conjunction with the Otago Regional Council.

When considering resource consent applications or plan changes, the Council will have regard to the natural hazards database.”

598. Ms Bowbyes recommended minor non-substantive changes to the balance of the policies supporting Objective 28.3.3 including substitution of “intolerable” for “unacceptable” in Policy 28.3.3.4. We support the suggested amendments, the content of which are set out in our Appendix 2.

599. Having reviewed the policies in Section 28.3.3. collectively, we consider that given the alternatives open to us, they are the most appropriate policies to achieve the relevant objective.

10.15. Section 28.4 – Other Relevant Provisions:

600. This is a standard provision that is reproduced throughout the PDP. The Hearing Panels considering earlier chapters have recommended amendments to it to more correctly reflect the content of the PDP and the fact that once the First Schedule process is concluded, it will form part of the ODP. We recommend like amendments for the same reasons. The fact that some chapters have been inserted by the Stage 2 Variations is reflected in those chapters being in italics. Appendix 2 sets out the suggested changes.

10.16. Section 28.5 – Information Requirements:

601. As notified, this section purported to state a requirement for an assessment of natural hazard effects as part of development proposals. We discussed with Ms Bowbyes whether it was consistent with Policy 28.3.2.3. She addressed this point in Section 8 of her reply evidence. In summary, Ms Bowbyes concluded that a consequential amendment was required to Section 28.5 to make it clearer that the database is not a trigger for the need to provide a natural hazards assessment. She referred us to the Oil Companies’ submission²⁶⁴ as providing scope for the recommended change.

602. We agree with Ms Bowbyes assessment. Accordingly, we recommend that the text read as follows:

“The Councils natural hazards database identifies land that is affected by, or potentially affected by, natural hazards. The database contains natural hazard information that has been developed at different scales and this should be taken into account when assessing the potential natural hazard risk. It is highly likely that for those hazards that have been identified at a ‘district wide’ level, further detailed analysis will be required.”

603. As amended, this is no longer true to label (it is no longer a statement of information requirements). We consider it now assists that reader in understanding the inter-relationship of the database with the operation of Policy 28.3.2.3. As such, we recommend that the

²⁶⁴ Submission 768

amended text be shifted in order that it sits as an Advice Note to that policy. We regard this as a non-substantive formatting change.

11. SUMMARY OF RECOMMENDATIONS:

604. Appendix 2 to this report sets out our recommended amendments to Chapter 28.
605. In addition to those amendments, we note Policy 28.3.2.4 is not currently consistent with Proposed RPS Policy 4.1.10. We have no jurisdiction to recommend a substantive amendment that would align the two. Accordingly, we recommend that should Policy 4.1.10 be finalised as part of appeals on the Proposed RPS in a form that continues to be inconsistent with Policy 28.3.2.4, Council promulgate a variation to align the two.
606. We also draw Council's attention to the desirability of updating its hazards database to include areas of known vegetation fire risk²⁶⁵.
607. Lastly, Appendix 3 sets out a summary of our recommendations in relation to submissions on Chapter 28.

For the Hearing Panel

Denis Nugent, Chair
Dated: 31 March 2018

²⁶⁵ Discussed at Section 10.11 above

Appendix 1: Chapter 2 Definitions as Recommended

2 DEFINITIONS

2.1 Definitions

Notes:

- a. Unless the context otherwise requires, the definitions in this chapter apply throughout the plan whenever the defined term is used. The reverse applies to the designations in Chapter 37. The definitions in Chapter 2 only apply to designations where the relevant designation says they apply.
- b. Where a term is not defined within the plan, reliance will be placed on the definition in the Act, where there is such a definition.
- c. Chapter 5: Tangata Whenua (Glossary) supplements the definitions within this chapter by providing English translations-explanations of Maori words and terms used in the plan
- d. Acoustic terms not defined in this chapter are intended to be used with reference to NZS 6801:2008 Acoustics - Measurement of environmental sound and NZS 6802:2008 Acoustics - Environmental noise.
- e. Any defined term includes both the singular and the plural.
- f. Any notes included within the definitions listed below are purely for information or guidance purposes only and do not form part of the definition.
- g. Where a definition title is followed by a zone or specific notation, the intention is that the application of the definition is limited to the specific zone or scenario described.

D

Definitions

A B C D E F G H I J K L M N O P Q R S T U V W X Y Z

Access	Means that area of land over which a site or lot obtains legal vehicular and/or pedestrian access to a legal road. This land may include an access leg, a private way, common land as defined on a cross-lease or company-lease, or common property (as defined in section 2 of the Unit Titles Act 2010).
Access Leg (Rear Lot or rear site)	Means the strip of land, which is included in the ownership of that lot or site, and which provides the legal, physical access from the frontage legal road to the net area of the lot or site.
Access Lot	Means a lot which provides the legal access or part of the legal access to one or more lots, and which is held in the same ownership or by tenancy-in-common in the same ownership as the lot(s) to which it provides legal access.
Accessory Building	Means any detached building the use of which is incidental to the principal building, use or activity on a site, and for residential activities includes a sleep out, garage or carport, garden shed, glasshouse, swimming pool, mast, shed used solely as a storage area, or other similar structure, provided that any garage or carport which is attached to or a part of any building shall be deemed to be an accessory building.
Accessway	Means any passage way, laid out or constructed by the authority of the council or the Minister of Works and Development or, on or after 1 April 1988, the Minister of Lands for the purposes of providing the public with a convenient route for pedestrians from any road, service lane, or reserve to another, or to any public place or to any railway station, or from one public place to another public place, or from one part of any road, service lane, or reserve to another part of that same road, service lane, or reserve ¹ .
Act	Means the Resource Management Act 1991.
Activity Sensitive To Aircraft Noise (ASAN) / Activity Sensitive to Road Noise	Means any residential activity, visitor accommodation activity, community activity and day care facility activity as defined in this District Plan including all outdoor spaces associated with any education activity, but excludes activity in police stations, fire stations, courthouses, probation and detention centres, government and local government offices.
Adjoining Land (Subdivision)	Includes land separated from other land only by a road, railway, drain, water race, river or stream.
Aerodrome	Means a defined area of land used wholly or partly for the landing, departure, and surface movement of aircraft including any buildings, installations and equipment on or adjacent to any such area used in connection with the aerodrome or its administration.
Aircraft	Means any machine that can derive support in the atmosphere from the reactions of the air otherwise than by reactions of the air against the surface of the earth. Excludes remotely piloted aircraft that weigh less than 15 kilograms.

Aircraft Operations	<p>Means the operation of aircraft during landing, take-off and taxiing but excludes:</p> <ul style="list-style-type: none"> a. aircraft operating in an emergency; b. aircraft using the Airport as an alternative to landing at a scheduled airport; c. military aircraft movements; and d. engine testing.
Air Noise Boundary Queenstown (ANB)	<p>Means a boundary as shown on the District Plan Maps, the location of which is based on the predicted day/night sound level of 65 dB L_{dn} from airport operations in 2037.</p>
Airport Activity	<p>Means land used wholly or partly for the landing, departure, and surface movement of aircraft, including:</p> <ul style="list-style-type: none"> a. aircraft operations which include private aircraft traffic, domestic and international aircraft traffic, rotary wing operations; b. aircraft servicing, general aviation, airport or aircraft training facilities and associated offices; c. runways, taxiways, aprons, and other aircraft movement areas; d. terminal buildings, hangars, air traffic control facilities, flight information services, navigation and safety aids, rescue facilities, lighting, car parking, maintenance and service facilities, fuel storage and fuelling facilities and facilities for the handling and storage of hazardous substances.
Airport Related Activity	<p>Means an ancillary activity or service that provides support to the airport. This includes:</p> <ul style="list-style-type: none"> a. land transport activities; b. buildings and structures; c. servicing and infrastructure; d. police stations, fire stations, medical facilities and education facilities provided they serve an aviation related purpose; e. retail and commercial services and industry associated with the needs of Airport passengers, visitors and employees and/or aircraft movements and Airport businesses; f. catering facilities; g. quarantine and incineration facilities; h. border control and immigration facilities; i. administrative offices (provided they are ancillary to an airport or airport related activity).
All Weather Standard	<p>Means a pavement which has been excavated to a sound subgrade, backfilled and compacted to properly designed drainage gradients with screened and graded aggregate and is usable by motor vehicles under all weather conditions, and includes metallised and sealed surfaces.</p>

Amenity Or Amenity Values	Means those natural or physical qualities and characteristics of an area that contribute to people's appreciation of its pleasantness, aesthetic coherence, and cultural and recreational attributes ² .
Antenna	Means telecommunications apparatus, being metal rod, wire or other structure, by which signals are transmitted or received, including any bracket or attachment but not any support mast or similar structure.
Archaeological Site	Means, subject to section 42(3) of the Heritage New Zealand Pouhere Taonga Act 2014: <ul style="list-style-type: none"> a. any place in New Zealand, including any building or structure (or part of a building or structure), that – <ul style="list-style-type: none"> i. was associated with human activity that occurred before 1900 or is the site of the wreck of any vessel where the wreck occurred before 1900; and ii. provides or may provide, through investigation by archaeological methods, evidence relating to the history of New Zealand; and b. includes a site for which a declaration is made under section 43(1) of the Heritage New Zealand Pouhere Taonga Act 2014.
Area Median Income (AMI)	Means the median household income for the Queenstown Lakes District as published by Statistics New Zealand following each census, and adjusted annually by the Consumer Price Index (CPI).
Bar (Hotel or Tavern)	Means any part of a hotel or tavern which is used principally for the sale, supply or consumption of liquor on the premises. Bar area shall exclude areas used for storage, toilets or like facilities and space.
Biodiversity Offsets	Means measurable conservation outcomes resulting from actions designed to compensate for residual adverse biodiversity impacts arising from project development after appropriate avoidance, minimisation, remediation and mitigation measures have been taken. The goal of biodiversity offsets is to achieve no net loss and preferably a net gain of biodiversity on the ground.
Biomass Electricity Generation	Means electricity generation derived from biomass systems being recently living organisms such as wood, wood waste, by products of agricultural processes and waste.
Boat	Means any vessel, appliance or equipment used or designed to be used for flotation and navigation on or through the surface of water, other than a wetsuit or lifejacket, and includes any aircraft whilst such aircraft is on the surface of the water. Craft or boating craft shall have the same meaning. Boating activities shall mean activities involving the use of boats on the surface of water.
Boundary	Means any boundary of the net area of a site and includes any road boundary or internal boundary. Site boundary shall have the same meaning as boundary.

² From section 2 of the Act

Definitions

A B C D E F G H I J K L M N O P Q R S T U V W X Y Z

	<p>Shall have the same meaning as the Building Act 2004, with the following exemptions in addition to those set out in the Building Act 2004:</p> <ol style="list-style-type: none"> fences and walls not exceeding 2m in height; retaining walls that support no more than 2 vertical metres of earthworks; structures less than 5m² in area and in addition less than 2m in height above ground level; radio and television aerials (excluding dish antennae for receiving satellite television which are greater than 1.2m in diameter), less than 2m in height above ground level; uncovered terraces or decks that are no greater than 1m above ground level; the upgrading and extension to the Arrow Irrigation Race provided that this exception only applies to upgrading and extension works that involve underground piping of the Arrow Irrigation Race; flagpoles not exceeding 7m in height; building profile poles, required as part of the notification of Resource Consent applications; public outdoor art installations sited on Council owned land; pergolas less than 2.5 metres in height either attached or detached to a building; <p>Notwithstanding the definition set out in the Building Act 2004, and the above exemptions a building shall include:</p> <ol style="list-style-type: none"> any vehicle, trailer, tent, marquee, shipping container, caravan or boat, whether fixed or moveable, used on a site for a residential accommodation unit for a period exceeding 2 months.
<p>Building Coverage</p>	<p>Means that portion of the net area of a site which is covered by buildings or parts of buildings, including overhanging or cantilevered parts of buildings, expressed as a percentage or area. Building coverage shall only apply to buildings at ground, or above ground level. The following shall not be included in building coverage:</p> <ol style="list-style-type: none"> pergolas; that part of eaves and/or spouting, fire aprons or bay or box windows projecting 600mm or less horizontally from any exterior wall; uncovered terraces or decks which are not more than 1m above ground level; uncovered swimming pools no higher than 1m above ground level; fences, walls and retaining walls; driveways and outdoor paved surfaces.
<p>Building Line Restriction</p>	<p>Means a restriction imposed on a site to ensure when new buildings are erected or existing buildings re-erected, altered or substantially rebuilt, no part of any such building shall stand within the area between the building line and the adjacent site boundary.</p>

	<p>Means a business primarily engaged in selling goods for consumption or use in the construction, modification, cladding, fixed decoration or outfitting of buildings and without limiting the generality of this term, includes suppliers of:</p> <ul style="list-style-type: none"> a. glazing; b. awnings and window coverings; c. bathroom, toilet and sauna installations; d. electrical materials and plumbing supplies; e. heating, cooling and ventilation installations; f. kitchen and laundry installations, excluding standalone appliances; g. paint, varnish and wall coverings; h. permanent floor coverings; i. power tools and equipment; j. locks, safes and security installations; and k. timber and building materials.
Camping Ground	Means camping ground as defined in the Camping Ground Regulations 1985 ³ .
Carriageway	Means the portion of a road devoted particularly to the use of motor vehicles.
Clearance Of Vegetation	<p>Means the removal, trimming, felling, or modification of any vegetation and includes cutting, crushing, cultivation, soil disturbance including direct drilling, spraying with herbicide or burning.</p> <p>Clearance of vegetation includes, the deliberate application of water or oversowing where it would change the ecological conditions such that the resident indigenous plant(s) are killed by competitive exclusion. Includes dryland cushion field species.</p>
Commercial	Means involving payment, exchange or other consideration.
Commercial Activity	Means the use of land and buildings for the display, offering, provision, sale or hire of goods, equipment or services, and includes shops, postal services, markets, showrooms, restaurants, takeaway food bars, professional, commercial and administrative offices, service stations, motor vehicle sales, the sale of liquor and associated parking areas. Excludes recreational, community and service activities, home occupations, visitor accommodation, registered holiday homes and registered homestays.
Commercial Livestock	Means livestock bred, reared and/or kept on a property for the purpose of commercial gain, but excludes domestic livestock.
Commercial Recreational Activities	Means the commercial guiding, training, instructing, transportation or provision of recreation facilities to clients for recreational purposes including the use of any building or land associated with the activity, excluding ski area activities.

³ Greyed out text indicates the provision is subject to variation and is therefore is not part of the Hearing Panel's recommendations.

Common Property	<p>Means:</p> <ul style="list-style-type: none"> a. all the land and associated fixtures that are part of the unit title development but are not contained in a principal unit, accessory unit, or future development unit; and b. in the case of a subsidiary unit title development, means that part of the principal unit subdivided to create the subsidiary unit title development that is not contained in a principal unit, accessory unit, or future development unit⁴.
Community Activity	Means the use of land and buildings for the primary purpose of health, welfare, care, safety, education, culture and/or spiritual well being. Excludes recreational activities. A community activity includes day care facilities, education activities, hospitals, doctors surgeries and other health professionals, churches, halls, libraries, community centres, police purposes, fire stations, courthouses, probation and detention centres, government and local government offices.
Community Housing	Means residential activity that maintains long term affordability for existing and future generations through the use of a retention mechanism, and whose cost to rent or own is within the reasonable means of low and moderate income households.
Comprehensive Development (For the purpose of Chapters 12 and 13 only)	Means the construction of a building or buildings on a site or across a number of sites with a total land area greater than 1400m ² .
Contributory Buildings (For the purpose of Chapter 26 only)	Means buildings within a heritage precinct that contribute to the significance of a heritage precinct some of which may be listed for individual protection in the Inventory under Rule 26.8. They may contain elements of heritage fabric, architecture or positioning that adds value to the heritage precinct. They have been identified within a heritage precinct because any future development of the site containing a contributory building may impact on the heritage values of heritage features, or the heritage precinct itself. Contributory buildings are identified on the plans under Section 26.7 'Heritage Precincts'. (Refer also to the definition of Non-Contributory Buildings).
Council	Means the Queenstown Lakes District Council or any Committee, Sub Committee, Community Board, Commissioner or person to whom any of the Council's powers, duties or discretions under this Plan have been lawfully delegated pursuant to the provisions of the Act. District council shall have the same meaning.
Critical Listening Environment	Means any space that is regularly used for high quality listening or communication for example principle living areas, bedrooms and classrooms but excludes non-critical listening environments.
Day Care Facility	Means land and/or buildings used for the care during the day of elderly persons with disabilities and/or children, other than those residing on the site.
Design Sound Level	Means 40 dB L _{dn} in all critical listening environments.
District	Means Queenstown Lakes District

⁴From the Unit Titles Act 2010

	<p>Means livestock bred, reared and/or kept on a property, excluding that which is for the purpose of commercial gain.</p> <p>a. In all zones, other than the Rural, Rural Lifestyle and Rural Residential Zones, it is limited to 5 adult poultry per site, and does not include adult roosters or peacocks; and</p> <p>b. In the Rural, Rural Lifestyle and Rural Residential Zones it includes any number of livestock bred, reared and/or kept on a site for family consumption, as pets, or for hobby purposes and from which no financial gain is derived, except that in the Rural Residential Zone it is limited to only one adult rooster and peacock per site.</p> <p>Note: Domestic livestock not complying with this definition shall be deemed to be commercial livestock and a farming activity.</p>
Earthworks	<p>Means the disturbance of land surfaces by the removal or depositing of material, excavation, filling or the formation of roads, banks, and tracks. Excludes the cultivation of land and the digging of holes for offal pits and the erection of posts or poles or the planting of trees⁵.</p>
Ecosystem Services	<p>Means the resources and processes the environment provides that people benefit from e.g. purification of water and air, pollination of plants and decomposition of waste.</p>
Education Activity	<p>Means the use of land and buildings for the primary purpose of regular instruction or training including early childhood education, primary, intermediate and secondary schools, tertiary education. It also includes ancillary administrative, cultural, recreational, health, social and medical services (including dental clinics and sick bays) and commercial facilities.</p>
Electricity Distribution	<p>Means the conveyance of electricity via electricity distribution lines, cables, support structures, substations, transformers, switching stations, kiosks, cabinets and ancillary buildings and structures, including communication equipment, by a network utility operator.</p>
	<p>Means the following activities:</p> <p>a. small and community-scale distributed electricity generation and solar water heating;</p> <p>b. renewable electricity generation;</p> <p>c. non-renewable electricity generation;</p> <p>d. wind electricity generation;</p> <p>e. solar electricity generation;</p> <p>f. stand-alone power systems (SAPS);</p> <p>g. biomass electricity generation;</p> <p>h. hydro generation activity;</p> <p>i. mini and micro hydro electricity generation.</p>
Environmental Compensation	<p>Means actions offered as a means to address residual adverse effects to the environment arising from project development that are not intended to result in no net loss or a net gain of biodiversity on the ground, includes residual adverse effects to other components of the environment including landscape, the habitat of trout and salmon, open space, recreational and heritage values.</p>

⁵ Greyed out text indicates the provision is subject to variation and is therefore is not part of the Hearing Panel's recommendations.

Exotic (Trees and Plants)	Means species which are not indigenous to that part of New Zealand.
Extent of Place (For the purpose of Chapter 26 only)	Means the area around and/or adjacent to a heritage feature listed in the Inventory under Section 26.8 and which is contained in the same legal title as a heritage feature listed in the Inventory, the extent of which is identified in Section 26.8.1. (Refer also to the definition of Setting).
External Alterations and Additions (For the purpose of Chapter 26 only)	Means undertaking works affecting the external heritage fabric of heritage features, but excludes repairs and maintenance, and partial demolition. External additions includes signs and lighting.
External Appearance (Buildings)	Means the bulk and shape of the building including roof pitches, the materials of construction and the colour of exterior walls, joinery, roofs and any external fixtures.
Factory Farming	Includes: <ul style="list-style-type: none"> a. the use of land and/or buildings for the production of commercial livestock where the regular feed source for such livestock is substantially provided other than from grazing the site concerned; b. boarding of animals; c. mushroom farming.
Farming Activity	Means the use of land and buildings for the primary purpose of the production of vegetative matters and/or commercial livestock. Excludes residential activity, home occupations, factory farming and forestry activity. Means the use of lakes and rivers for access for farming activities.
Farm Building	Means a building (as defined) necessary for the exercise of farming activities (as defined) and excludes: <ul style="list-style-type: none"> a. buildings for the purposes of residential activities, home occupations, factory farming and forestry activities; b. visitor accommodation and temporary accommodation.
Flatboard	Means a portable sign that is not self-supporting ⁶ .
Flat site	Means a site where the ground slope is equal to or less than 6 degrees (i.e equal to or less than 1 in 9.5). Ground slope in relation to building height shall be determined by measurement over the extremities of each building elevation. Where all elevations indicate a ground slope of less than 6 degrees (i.e equal to or less than 1 in 9.5), rules applicable to flat sites will apply.
Flood Protection Work	Means works, structures and plantings for the protection of property and people from flood fairways or lakes, the clearance of vegetation and debris from flood fairways, stopbanks, access tracks, rockwork, rockwork, anchored trees, wire rope and other structures.

⁶ Greyed out text indicates the provision is subject to variation and is therefore is not part of the Hearing Panel's recommendations.

Forestry Activity	Means the use of land primarily for the purpose of planting, tending, managing and harvesting of trees for timber or wood production in excess of 0.5ha in area.
Formed Road	Means a road with a carriageway constructed to an all-weather standard with a minimum width of 3m.
Free Standing Sign	Means a self supporting sign not attached to a building and includes a sign on a fence and a sandwich board ⁷ .
Frontage	Means the road boundary of any site.
Full-Time Equivalent Person	Means the engagement of a person or persons in an activity on a site for an average of 8 hours per day assessed over any 14 day period.
Garage	Is included within the meaning of residential unit, and means a building or part of a building principally used for housing motor vehicles and other ancillary miscellaneous items.
Gross Floor Area (GFA)	Means the sum of the gross area of the several floors of all buildings on a site, measured from the exterior faces of the exterior walls, or from the centre lines of walls separating two buildings.
	Shall be measured:
Ground Floor Area (For Signs)	<ul style="list-style-type: none"> a. horizontally by the length of the building along the road, footpath, access way or service lane to which it has frontage. b. vertically by the height from the surface of the road, footpath, access way or service land or as the case may be to the point at which the verandah, if any, meets the wall of the building or to a height of 3m above the surface of the road, footpath, access way or service lane, whichever is less⁸.
Ground Floor Area	Means any areas covered by the building or parts of the buildings and includes overhanging or cantilevered parts but does not include pergolas (unroofed), projections not greater than 800mm including eaves, bay or box windows, and uncovered terraces or decks less than 1 m above ground level.

^{7,8} Greyed out text indicates the provision is subject to variation and is therefore is not part of the Hearing Panels recommendations.

Hydro Generation Activity	Means activities associated with the generation of hydro electricity and includes the operation, maintenance, refurbishment, enhancement and upgrade of hydro generation facilities.
Indigenous Vegetation	Means vegetation that occurs naturally in New Zealand, or arrived in New Zealand without human assistance, including both vascular and non-vascular plants.
Indoor Design Sound Level	Means 40 dB L _{dn} in all critical listening environments.
Industrial Activity	Means the use of land and buildings for the primary purpose of manufacturing, fabricating, processing, packing, or associated storage of goods
Informal Airport	Means any defined area of land or water intended or designed to be used for the landing, departure movement or servicing of aircraft and specifically excludes the designated 'Aerodromes', shown as designations 2, 64, and 239 in the District Plan. This excludes the airspace above land or water located on any adjacent site over which an aircraft may transit when arriving and departing from an informal airport.
Internal Boundary	Means any boundary of the net area of a site other than a road boundary.
Internal Alterations (For the purpose of Chapter 26 only)	Means undertaking works affecting the internal heritage fabric of heritage features, but excludes repairs and maintenance. Internal alterations includes the partial removal and replacement of decoration, windows, ceilings, floors or roofs that only affect the interior of the building.
Kitchen Facility	Means any space, facilities and surfaces for the storage, rinsing preparation and/or cooking of food, the washing of utensils and the disposal of waste water, including a food preparation bench, sink, oven, stove, hot-plate or separate hob, refrigerator, dish-washer and other kitchen appliances.
L_{Aeq} (15min)	Means the A frequency weighted time average sound level over 15 minutes, in decibels (dB).
L_{AFmax}	Means the maximum A frequency weighted fast time weighted sound level, in decibels (dB), recorded in a given measuring period.
L_{dn}	Means the day/night level, which is the A frequency weighted time average sound level, in decibels (dB), over a 24-hour period obtained after the addition of 10 decibels to the sound levels measured during the night (2200 to 0700 hours).
Lake	Means a body of fresh water which is entirely or nearly surrounded by land ¹⁰ .
Landfill	Means a site used for the deposit of solid wastes onto or into land ¹¹ .
Landmark Building (For the purposes of Chapter 12 only)	Means the provision of tree and/or shrub plantings and may include any ancillary lawn, water, rocks, paved areas or amenity features, the whole of such provision being so arranged as to improve visual amenity, human use and enjoyment and/or to partially or wholly screen activities or buildings, and/or to provide protection from climate.

¹⁰ From section 2 of the Act

¹¹ Greyed out text indicates the provision is subject to variation and is therefore is not part of the Hearing Panel's recommendations.

Landscaping	Means the provision of tree and/or shrub plantings and may include any ancillary lawn, water, rocks, paved areas or amenity features, the whole of such provision being so arranged as to improve visual amenity, human use and enjoyment and/or to partially or wholly screen activities or buildings, and/or to provide protection from climate.
Landside	Means an area of an airport and buildings to which the public has unrestricted access.
Laundry Facilities	Means facilities for the rinsing, washing and drying of clothes and household linen, and the disposal of waste water, and includes either a washing machine, tub or clothes dryer.
Licensed Premises	Means any premises or part of any premises, in which liquor may be sold pursuant to a licence, and includes any conveyance, or part of any conveyance on which liquor may be sold pursuant to the licence.
Lift Tower	Means a structure used for housing lift machinery and includes both the lift shaft and machinery room.
Liquor	Shall have the same meaning as alcohol as defined in the Sale and Supply of Alcohol Act 2012.
Living Area	Means any room in a residential unit other than a room used principally as a bedroom, laundry or bathroom.
Loading Space	Means a portion of a site, whether covered or not, clear of any road or service lane upon which a vehicle can stand while being loaded or unloaded.
Lot (Subdivision)	Means a lot, two or more adjoining lots to be held together in the same ownership, or any balance area, shown on a subdivision consent plan, except that in the case of land being subdivided under the cross lease or company lease systems or the Unit Titles Act 2010, lot shall have the same meaning as site.
Low Income	Means household income below 80% of the area median income.
Manoeuvre Area	Means that part of a site used by vehicles to move from the vehicle crossing to any parking, garage or loading space and includes all driveways and aisles, and may be part of an access strip.
MASL	Means "metres above sea level".
Mast	Means any pole, tower or similar structured designed to carry antennas or dish antennas or otherwise to facilitate telecommunications.
Mineral	Means a naturally occurring inorganic substance beneath or at the surface of the earth, whether or not under water and includes all metallic minerals, non metallic minerals, fuel minerals, precious stones, industrial rocks and building stones and a prescribed substance within the meaning of the Atomic Energy Act 1945.
Mineral Exploration	Means any activity undertaken for the purpose of identifying mineral deposits or occurrences and evaluating the feasibility of mining particular deposits or occurrences of 1 or more minerals; and includes any drilling, dredging, or excavations (whether surface or subsurface) that are reasonably necessary to determine the nature and size of a mineral deposit or occurrence; and to explore has a corresponding meaning.
Mineral Prospecting	Means any activity undertaken for the purpose of identifying land likely to contain mineral deposits or occurrences; and includes the following activities: <ol style="list-style-type: none"> geological, geochemical, and geophysical surveys; the taking of samples by hand or hand held methods; aerial surveys.

Mini and Micro Hydro Electricity Generation	Means conversion of the energy of falling water into electricity. Mini and micro generation may utilise impulse or reaction turbines and include intake or diversion structures, small weir, headrace, penstock, channel, pipes and generator.
Mining	Means to take, win or extract, by whatever means: a. a mineral existing in its natural state in land; or b. a chemical substance from a mineral existing in its natural state in land.
Mining Activity	Means the use of land and buildings for the primary purpose of the extraction, winning, quarrying, excavation, taking and associated processing of minerals and includes prospecting and exploration ¹² .
Minor Alterations and Additions to a Building (For the purposes of Chapter 10 only)	Means the following: a. constructing an uncovered deck; b. replacing windows or doors in an existing building that have the same profile, trims and external reveal depth as the existing; c. changing existing materials or cladding with other materials or cladding of the same texture, profile and colour.
Minor Repairs and Maintenance (For the purpose of Chapter 26 only)	Means repair of building materials and includes replacement of minor components such as individual bricks, cut stone, timber sections, roofing and glazing. The replacement items shall be of the original or closely matching material, colour, texture, form and design, except that there shall be no replacement of any products containing asbestos, but a closely matching product may be used instead. Repairs and maintenance works that do not fall within this definition will be assessed as alterations.
Minor Trimming (For the purpose of Chapter 32 only)	Means the removal of not more than 10% of the live foliage from the canopy of the tree or structural scaffold branches within a single calendar year.
Minor Trimming of a Hedgerow (For the purpose of Chapter 32 only)	Means the removal of not more than 50% of the live foliage within a single five year period.

¹² Greyed out text indicates the provision is subject to variation and is therefore is not part of the Hearing Panel's recommendations.

<p>Minor Upgrading (For the purpose of Chapter 30 only)</p>	<p>Means an increase in the carrying capacity, efficiency or security of electricity transmission and distribution or telecommunication lines utilising the existing support structures or structures of similar character, intensity and scale and includes the following:</p> <ul style="list-style-type: none"> a. addition of lines, circuits and conductors; b. reconducting of the line with higher capacity conductors; c. re-sagging of conductors; d. bonding of conductors; e. addition or replacement of longer or more efficient insulators; f. addition of electrical fittings or ancillary telecommunications equipment; g. addition of earth-wires which may contain lightning rods, and earth-peaks; h. support structure replacement within the same location as the support structure that is to be replaced; i. addition or replacement of existing cross-arms with cross-arms of an alternative design; j. replacement of existing support structure poles provided they are less or similar in height, diameter and are located within 2 metres of the base of the support pole being replaced; k. addition of a single service support structure for the purpose of providing a service connection to a site, except in the Rural zone; l. the addition of up to three new support structures extending the length of an existing line provided the line has not been lengthened in the preceding five year period.
<p>Moderate Income</p>	<p>Means household income between 80% and 120% of the area median income.</p>
<p>Motorised Craft</p>	<p>Means any boat powered by an engine.</p>
<p>National Grid</p>	<p>Means the network that transmits high-voltage electricity in New Zealand and that, at the notification of this Plan, was owned and operated by Transpower New Zealand Limited, including:</p> <ul style="list-style-type: none"> a. transmission lines; and b. electricity substations¹³.
<p>National Grid Corridor</p>	<p>Means the area measured either side of the centreline of above ground national grid line as follows:</p> <ul style="list-style-type: none"> a. 16m for the 110kV lines on pi poles b. 32m for 110kV lines on towers c. 37m for the 220kV transmission lines. <p>Excludes any transmission lines (or sections of line) that are designated.</p>

¹³ Adapted from the Resource Management (National Environmental Standards for Electricity Transmission Activities) Regulations 2009

	<p>Means the sum of the floor areas, each measured to the inside of the exterior walls of the building, and shall include the net floor area of any accessory building, but it shall exclude any floor area used for:</p> <ol style="list-style-type: none"> lift wells, including the assembly area immediately outside the lift doors for a maximum depth of 2m; stairwells; tank rooms, boiler and heating rooms, machine rooms, bank vaults; those parts of any basement not used for residential, retail, office or industrial uses; toilets and bathrooms, provided that in the case of any visitor accommodation the maximum area permitted to be excluded for each visitor unit or room shall be 3m²; 50% of any pedestrian arcade, or ground floor foyer, which is available for public thoroughfare; parking areas required by the Plan for, or accessory to permitted uses in the building.
<p>Noise Event</p>	<p>Means an event, or any particular part of an event, whereby amplified sound, music, vocals or similar noise is emitted by the activity, but excludes people noise.</p>
<p>Noise Limit</p>	<p>Where amplified noise ceases during a particular event, the event is no longer considered a noise event.</p>
<p>Noise Limit Non-Contributory Buildings (For the purpose of Chapter 26 only)</p>	<p>Means a L_{Aeq} (15 min) or L_{AFmax} sound level in decibels that is not to be exceeded.</p> <p>Means buildings within a heritage precinct that have no identified heritage significance or fabric and have not been listed for individual protection in the Inventory under Rule 26.8. They have been identified within a heritage precinct because any future development of a site containing a non-contributory building may impact on the heritage values of heritage features or contributory buildings within the heritage precinct. Non-Contributory Buildings are identified on the plans under Section 26.7 'Heritage Precincts'.</p>
<p>Non Critical Listening Environment</p>	<p>Means any space that is not regularly used for high quality listening or communication including bathroom, laundry, toilet, pantry, walk-in-wardrobe, corridor, hallway, lobby, cloth drying room, or other space of a specialised nature occupied neither frequently nor for extended periods.</p>
<p>No net loss</p>	<p>Means no overall reduction in biodiversity as measured by the type, amount and condition.</p>
<p>Notional Boundary</p>	<p>Means a line 20m from any side of residential unit or the legal boundary whichever is closer to the residential unit.</p>
<p>Office</p>	<p>Means any of the following:</p> <ol style="list-style-type: none"> administrative offices where the administration of any entity, whether trading or not, and whether incorporated or not, is conducted; commercial offices being place where trade, other than that involving the immediately exchange for goods or the display or production of goods, is transacted; professional offices.
<p>Open Space</p>	<p>Means any land or space which is not substantially occupied by buildings and which provides benefits to the general public as an area of visual, cultural, educational, or recreational amenity values.</p>

Definitions

A B C D E F G H I J K L M N O P Q R S T U V W X Y Z

Outdoor Living Space	Means an area of open space to be provided for the exclusive use of the occupants of the residential unit to which the space is allocated.
Outdoor Recreation Activity	Means a recreation activity undertaken entirely outdoors with buildings limited to use for public shelter, toilet facilities, information and ticketing.
Outdoor Storage	Means land used for the purpose of storing vehicles, equipment, machinery, natural and processed products and wastes, outside a fully enclosed building for periods in excess of 4 weeks in any one year.
Outer Control Boundary (OCB)	Means a boundary, as shown on district plan maps, the location of which is based on the predicted day/night sound levels of 55 dBA L_{dn} from airport operations in 2036 for Wanaka Airport and 2037 for Queenstown Airport.
Park and Ride Facility	Means an area to leave vehicles and transfer to public transport or car pool to complete the rest of a journey into an urban area. Park and Ride Facilities include car parking areas, public transport interchange and associated security measures, fencing, lighting, ticketing systems, shelter and ticketing structures, landscape planting and earthworks ¹⁴ .
Parking Area	Means that part of a site within which vehicle parking spaces are accommodated, and includes all parking spaces, manoeuvre areas and required landscape areas.
Parking Space	Means a space on a site available at any time for accommodating one stationary motor vehicle.
Partial Demolition (For the purpose of Chapter 26 only)	Means the demolition of the heritage fabric of a heritage feature exceeding 30% but less than 70% by volume or area whichever is the greater. Volume is measured from the outermost surface of the heritage feature (including any surfaces below ground) and the area is measured by the footprint of the heritage feature. Partial demolition shall be determined as the cumulative or incremental demolition of the heritage fabric as from the date that the decision [specify] on Chapter 26 of the District Plan is publicly notified.
Passenger Lift Systems	Means any mechanical system used to convey or transport passengers and other goods within or to a Ski Area Sub-Zone, including chairlifts, gondolas, T-bars and rope tows, and including all moving, fixed and ancillary components of such systems such as towers, pylons, cross arms, pulleys, cables, chairs, cabins, and structures to enable the embarking and disembarking of passengers. Excludes base and terminal buildings.
Photovoltaics (PV)	Means a device that converts the energy in light (photons) into electricity, through the photovoltaic effect. A PV cell is the basic building block of a PV system, and cells are connected together to create a single PV module (sometimes called a 'panel'). PV modules can be connected together to form a larger PV array.
Potable Water Supply	Means a water supply that meets the criteria of the Ministry of Health 'Drinking Water Standards for New Zealand 2005 (revised 2008)'.
Principal Building	Means a building, buildings or part of a building accommodating the activity for which the site is primarily used.
Private Way	Means any way or passage whatsoever over private land within a district, the right to use which is confined or intended to be confined to certain persons or classes of persons, and which is not thrown open or intended to be open to the use of the public generally; and includes any such way or passage as aforesaid which at the commencement of this Part exists within any district ¹⁵ .
Projected Annual Aircraft Noise Contour (AANC)	Means the projected annual aircraft noise contours calculated as specified by the Aerodrome Purposes Designation 2, Condition 13.

¹⁴ Greyed out text indicates the provision is subject to variation and is therefore is not part of the Hearing Panel's recommendations.

¹⁵ From the Local Government Act 1974.

Protected Feature (For the purpose of Chapter 26 only)	Means the collective terms used to explain all buildings, features, and structures listed in the Inventory of protected features (26.9).
Public Area	Means any part(s) of a building open to the public, but excluding any service or access areas of the building.
Public Place	Means every public thoroughfare, park, reserve, lake, river to place to which the public has access with or without the payment of a fee, and which is under the control of the council, or other agencies. Excludes any trail as defined in this Plan.
Public Space (For the purposes of Chapter 32 only)	Means the parts of the district that are owned and managed by the Queenstown Lakes District Council, are accessible to the public within the Residential Arrowtown Historic Management Zone including roads, parks and reserves.
Radio Communication Facility	Means any transmitting/receiving devices such as aerials, dishes, antennas, cables, lines, wires and associated equipment/apparatus, as well as support structures such as towers, masts and poles, and ancillary buildings.
Rear Site	Means a site which is situated generally to the rear of another site, both sites having access to the same road or private road, and includes sites which have no frontage to a road or private road of 6m or more.

	<p>Means a stand-alone or duplex residential unit which has been registered with the Council as a Registered Holiday Home. For the purpose of this definition:</p> <ul style="list-style-type: none"> a. a stand-alone residential unit shall mean a residential unit contained wholly within a site and not connected to any other building; b. a duplex residential unit shall mean a residential unit which is attached to another residential unit by way of a common or party wall, provided the total number of residential units attached in the group of buildings does not exceed two residential units; c. where the residential unit contains a residential flat, the registration as a Registered Holiday Home shall apply to either the letting of the residential unit or the residential flat but not to both. <p>Advice Notes:</p> <ul style="list-style-type: none"> a. a formal application must be made to the Council for a property to become a Registered Holiday Home. b. there is no requirement to obtain registration for the non-commercial use of a residential unit by other people (for example making a home available to family and/or friends at no charge)¹⁶.
Registered Holiday Home	
Registered Homestay	<p>Means a Homestay used by up to 5 paying guests which has been registered with the Council as a Registered Homestay.</p> <p>Advice Note:</p> <p>A formal application must be made to the Council for a property to become a Registered Homestay¹⁷.</p>
Relocated/Relocatable Building	<p>Means a building which is removed and re-erected on another site, but excludes any newly pre-fabricated building which is delivered dismantled to a site for erection on that site. This definition excludes removal and re-siting.</p>
Relocation (For the purpose of Chapter 26 only)	<p>Means the relocation of heritage features, both within, or beyond the site. The definition of Relocation (Buildings) in Chapter 2 (which means the removal of a building from any site to another site) shall not apply to chapter 26.</p>
Relocation (Building)	<p>Means the removal of any building from any site to another site.</p>
Remotely Piloted Aircraft	<p>Means an unmanned aircraft that is piloted from a remote station.</p>
Removal (Building)	<p>Means the shifting of a building off a site and excludes demolition of a building.</p>
Renewable Electricity Generation (REG)	<p>Means generation of electricity from solar, wind, hydro-electricity, geothermal and biomass energy sources.</p>

^{16, 17} Greyed out text indicates the provision is subject to variation and is therefore is not part of the Hearing Panel's recommendations.

Renewable Electricity Generation Activities	Means the construction, operation and maintenance of structures associated with renewable electricity generation. This includes small and community-scale distributed renewable generation activities and the system of electricity conveyance required to convey electricity to the distribution network and/or the national grid and electricity storage technologies associated with renewable electricity. Includes research and exploratory scale investigations into technologies, methods and sites, such as masts, drilling and water monitoring. This definition includes renewable electricity generation (REG), solar water heating, wind electricity generation, and mini and micro hydro electricity generation (as separately defined).
Renewable Energy	Means energy that comes from a resource that is naturally replenished, including solar, hydro, wind, and biomass energy.
Reserve	Means a reserve in terms of the Reserves Act 1977.
Residential Activity	Means the use of land and buildings by people for the purpose of permanent residential accommodation, including all associated accessory buildings, recreational activities and the keeping of domestic livestock. For the purposes of this definition, residential activity shall include Community Housing, emergency, refuge accommodation and the non-commercial use of holiday homes. Excludes visitor accommodation ¹⁸ .
Residential Flat	Means a residential activity that comprises a self-contained flat that is ancillary to a residential unit and meets all of the following criteria: <ul style="list-style-type: none"> a. the total floor area does not exceed; <ul style="list-style-type: none"> i. 150m² in the Rural Zone and the Rural Lifestyle Zone; ii. 70m² in any other zone; b. not including in either case the floor area of any garage or carport; c. contains no more than one kitchen facility; d. is limited to one residential flat per residential unit; and e. is situated on the same site and held in the same ownership as the residential unit. Note: A proposal that fails to meet any of the above criteria will be considered as a residential unit.
Residential Unit	Means a residential activity which consists of a single self contained household unit, whether of one or more persons, and includes accessory buildings. Where more than one kitchen and/or laundry facility is provided on the site, other than a kitchen and/or laundry facility in a residential flat, there shall be deemed to be more than one residential unit.
Re-siting (Building)	Means shifting a building within a site.
Resort	Means an integrated and planned development involving low average density of residential development (as a proportion of the developed area) principally providing temporary visitor accommodation and forming part of an overall development focused on onsite visitor activities.
Restaurant	Means any land and/or buildings, or part of a building, in which meals are supplied for sale to the general public for consumption on the premises, including such premises which a licence has been granted pursuant to the Sale and Supply of Alcohol Act 2012.

<p>Retail Sales / Retail / Retailing</p>	<p>Means the direct sale or hire to the public from any site, and/or the display or offering for sale or hire to the public on any site of goods, merchandise or equipment, but excludes recreational activities.</p>
<p>Retirement Village</p>	<p>Means the residential units (either detached or attached) and associated facilities for the purpose of accommodating retired persons. This use includes as accessory to the principal use any services or amenities provided on the site such as shops, restaurants, medical facilities, swimming pools and recreational facilities and the like which are to be used exclusively by the retired persons using such accommodation.</p>
<p>Reverse Sensitivity</p>	<p>Means the potential for the operation of an existing lawfully established activity to be constrained or curtailed by the more recent establishment or intensification of other activities which are sensitive to the established activity.</p>
<p>Right of Way</p>	<p>Means an area of land over which there is registered a legal document giving rights to pass over that land to the owners and occupiers of other land.</p>
<p>River</p>	<p>Means a continually or intermittently flowing body of fresh water; and includes a stream and modified watercourse; but does not include any artificial watercourse (including an irrigation canal, water supply race, canal for the supply of water for electricity power generation, and farm drainage canal)¹⁹.</p>
<p>Road</p>	<p>Means a road as defined in section 315 of the Local Government Act 1974.</p>
<p>Road Boundary</p>	<p>Means any boundary of a site abutting a legal road (other than an accessway or service land) or contiguous to a boundary of a road designation. Frontage or road frontage shall have the same meaning as road boundary.</p>
<p>Root Protection Zone (For the purposes of Chapter 32 only)</p>	<p>Means for a tree with a spreading canopy, the area beneath the canopy spread of a tree, measured at ground level from the surface of the trunk, with a radius to the outer most extent of the spread of the tree's branches, and for a columnar tree, means the area beneath the canopy extending to a radius half the height of the tree. As demonstrated by the diagrams below.</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">  <p>SPREADING CANOPY</p> </div> <div style="text-align: center;">  <p>COLUMNAR CANOPY</p> </div> </div>

Rural Industrial Activity	Means the use of land and buildings for the purpose of manufacturing, fabricating, processing, packing and/or storage of goods and materials grown or sourced within the Rural Zone and the storage of goods, materials and machinery associated with commercial contracting undertaken within the Rural Zone.
Sense of Place (For the purpose of Chapter 12 only)	Means the unique collection of visual, cultural, social, and environmental qualities and characteristics that provide meaning to a location and make it distinctly different from another. Defining, maintaining, and enhancing the distinct characteristics and quirks that make a town centre unique fosters community pride and gives the town a competitive advantage over others as it provides a reason to visit and a positive and engaging experience. Elements of the Queenstown town centre that contribute to its sense of place are the core of low rise character buildings and narrow streets and laneways at its centre, the pedestrian links, the small block size of the street grid, and its location adjacent to the lake and surrounded by the ever-present mountainous landscape.
Service Activity	Means the use of land and buildings for the primary purpose of the transport, storage, maintenance or repair of goods.
Service Lane	Means any lane laid out or constructed either by the authority of the council or the Minister of Works and Development or, on or after 1 April 1988, the Minister of Lands for the purpose of providing the public with a side or rear access for vehicular traffic to any land ²⁰ .
Service Station	Means any site where the dominant activity is the retail sale of motor vehicle fuels, including petrol, LPG, CNG, and diesel, and may also include any one or more of the following: <ul style="list-style-type: none"> a. the sale of kerosene, alcohol based fuels, lubricating oils, tyres, batteries, vehicle spare parts and other accessories normally associated with motor vehicles; b. mechanical repair and servicing of motor vehicles, including motor cycles, caravans, boat motors, trailers, except in any Residential, Town Centre or Township Zone; c. inspection and/or certification of vehicles; d. the sale of other merchandise where this is an ancillary activity to the main use of the site. <p>Excludes:</p> <ul style="list-style-type: none"> i. panel beating, spray painting and heavy engineering such as engine reboring and crankshaft grinding, which are not included within mechanical repairs of motor vehicles and domestic garden equipment for the purposes of b. above.
Setback	Means the distance between a building and the boundary of its site. Where any building is required to be set back from any site boundary, no part of that building shall be closer to the site boundary than the minimum distance specified. Where any road widening is required by this Plan, the setback shall be calculated from the proposed final site boundary. The setback distance shall only apply to buildings at ground, or above ground level.

²⁰. From section 315 of the Local Government Act 1974

<p>Setting (For the purpose of Chapter 26 only)</p>	<p>Means the area around and/or adjacent to a heritage feature listed under the Inventory in Section 26.8 and defined under 26.8.1, which is integral to its function, meaning, and relationships, and which is contained in the same legal title as the heritage feature listed on the Inventory. (Refer also to the definition of 'Extent of Place').</p>
<p>Showroom</p>	<p>Means any defined area of land or a building given over solely to the display of goods. No retailing is permitted unless otherwise specifically provided for in the zone in which the land or building is located.</p>
<p>Sign and Signage</p>	<p>Means:</p> <ul style="list-style-type: none"> a. any external name, figure, character, outline, display, delineation, announcement, design, logo, mural or other artwork, poster, handbill, banner, captive balloon, flag, flashing sign, flatboard, free-standing sign, illuminated sign, moving signs, roof sign, sandwich board, streamer, hoarding or any other thing of a similar nature which is: i) intended to attract attention; and ii) visible from a road or any public place; b. all material and components comprising the sign, its frame, background, structure, any support and any means by which the sign is attached to any other thing; c. any sign written vehicle/trailer or any advertising media attached to a vehicle/trailer. <p>Notes:</p> <ul style="list-style-type: none"> i. This does include corporate colour schemes. ii. See definitions of SIGN AREA and SIGN TYPES²¹.
<p>Sign Area</p>	<p>The area of a sign means the surface area of a sign and the area of a sign includes all the area actually or normally enclosed, as the case may be, by the outside of a line drawn around the sign and enclosing the sign²².</p>

^{21, 22} Greyed out text indicates the provision is subject to variation and is therefore is not part of the Hearing Panel's recommendations.

	<p>Means the use of natural and physical resources for the purpose of establishing, operating and maintaining the following activities and structures:</p> <ol style="list-style-type: none"> recreational activities either commercial or non-commercial; passenger lift systems; use of snowgroomers, snowmobiles and 4WD vehicles for support or operational activities; activities ancillary to commercial recreational activities including avalanche safety, ski patrol, formation of snow trails and terrain; installation and operation of snow making infrastructure including reservoirs, pumps and snow makers; and in the Waioarau Snow Farm Ski Area Sub-Zone vehicle and product testing activities, being activities designed to test the safety, efficiency and durability of vehicles, their parts and accessories.
<p>Ski Area Sub-Zone Accommodation</p>	<p>Means the use of land or buildings for short-term living accommodation for visitor, guest, worker, and</p> <ol style="list-style-type: none"> includes such accommodation as hotels, motels, guest houses, bunkhouses, lodges and the commercial letting of a residential unit; and may include some centralised services or facilities such as food preparation, dining and sanitary facilities, conference, bar and recreational facilities if such facilities are ancillary to the accommodation facilities; and is limited to visitors, guests or workers, visiting and or working in the respective Ski Area Sub-Zone.
<p>Sloping Site</p>	<p>Means a site where the ground slope is greater than 6 degrees (i.e greater than 1 in 9.5). Ground slope in relation to building height shall be determined by measurement over the extremities of each building elevation. Where any elevation indicates a ground slope of greater than 6 degrees (i.e greater than 1 in 9.5), rules applicable to sloping sites will apply.</p>
<p>Small and Community-Scale Distributed Electricity Generation</p>	<p>Means renewable electricity generation for the purpose of using electricity on a particular site, or supplying an immediate community, or connecting into the distribution network.</p>
<p>Small Cells Unit</p>	<p>Means a device:</p> <ol style="list-style-type: none"> that receives or transmits radiocommunication or telecommunication signals; and the volume of which (including any ancillary equipment, but not including any cabling) is not more than 0.11m³.
<p>Solar Electricity Generation</p>	<p>Means the conversion of the sun's energy directly into electrical energy. The most common device used to generate electricity from the sun is photovoltaics (PV). This may include free standing arrays, solar arrays attached to buildings or building integrated panels.</p>
<p>Solar Water Heating</p>	<p>Means devices that heat water by capturing the sun's energy as heat and transferring it directly to the water or indirectly using an intermediate heat transfer fluid. Solar water heaters may include a solar thermal collector, a water storage tank or cylinder, pipes, and a transfer system to move the heat from the collector to the tank.</p>

Stand-Alone Power Systems (SAPS)	Means off-grid generation for activities including residential, visitor and farming activities, on remote sites that do not have connection to the local distribution network. SAP's will usually include battery storage, a backup generator, an inverter and controllers etc, as well as generation technologies such as solar, mini or micro hydro, wind electricity generation or a combination thereof.
Structure	Means any building, equipment device or other facility made by people and which is fixed to land and includes any raft.
Structure Plan	Means a plan included in the district plan, and includes spatial development plans, concept development plans and other similarly titled documents.
Subdivision	Means: <ol style="list-style-type: none"> a. the division of an allotment: <ol style="list-style-type: none"> i. by an application to the Registrar-General of Land for the issue of a separate certificate of title for any part of the allotment; or ii. by the disposition by way of sale or offer for sale of the fee simple to part of the allotment; or iii. by a lease of part of the allotment which, including renewals, is or could be for a term of more than 35 years; or iv. by the grant of a company lease or cross lease in respect of any part of the allotment; or v. by the deposit of a unit plan, or an application to the Registrar-General of Land for the issue of a separate certificate of title for any part of a unit on a unit plan; or b. an application to the Registrar-General of Land for the issue of a separate certificate of title in circumstances where the issue of that certificate of title is prohibited by section 226²⁶.
Subdivision and Development	Includes subdivision, identification of building platforms, any buildings and associated activities such as roading, earthworks, lighting, landscaping, planting and boundary fencing and access/gateway structures.
Tavern	Means any premises used or intended to be used in the course of business principally for the provision to the public of liquor and other refreshments but does not include an airport bar.
Technical Arborist (For the purposes of Chapter 32 only)	Means a person who: <ol style="list-style-type: none"> a. by possession of a recognised arboricultural degree or diploma and on-the-job experience is familiar with the tasks, equipment and hazards involved in arboricultural operations; and b. has demonstrated proficiency in tree inspection and evaluating and treating hazardous trees; and c. has demonstrated competency to Level 6 NZQA Diploma in Arboriculture standard or Level 4 NZQA Certificate in Horticulture (Arboriculture) standard (or be of an equivalent arboricultural standard).

	<p>Means a business that is a mixture of wholesaling and retailing goods in one or more of the following categories:</p> <ul style="list-style-type: none"> a. automotive and marine suppliers; b. building suppliers; c. catering equipment suppliers; d. farming and agricultural suppliers; e. garden and patio suppliers f. hire services (except hire or loan of books, video, DVD and other similar home entertainment items); g. industrial clothing and safety equipment suppliers; and h. office furniture, equipment and systems suppliers.
Trade Supplier	
Trade Wastes	<p>Means any water that is used in a commercial or industrial process, and is then discharged to the Council's waste water system.</p> <p>Means any public access route legally created by way of a grant of easement registered after 11 December 2007 for the purpose of providing public access in favour of the Queenstown Lakes District Council, the Crown or any of its entities, and specifically excludes:</p> <ul style="list-style-type: none"> a. roads, including road reserves; b. public access easements created by the process of tenure review under the Crown Pastoral Land Act; and c. public access routes over any reserve administered by Queenstown Lakes District Council, the Crown or any of its entities.
Trail	
Under Verandah Sign	<p>Means a sign attached to the under side of a verandah²⁷.</p>
Unit	<p>Means any residential unit, or visitor accommodation unit of any type.</p>
Urban Development	<p>Means development which is not of a rural character and is differentiated from rural development by its scale, intensity, visual character and the dominance of built structures. Urban development may also be characterised by a reliance on reticulated services such as water supply, wastewater and stormwater and by its cumulative generation of traffic. For the avoidance of doubt, a resort development in an otherwise rural area does not constitute urban development.</p>
Urban Growth Boundary	<p>Means a boundary shown on the planning maps which provides for and contains existing and future urban development within an urban area.</p>

²⁷ Greyed out text indicates the provision is subject to variation and is therefore not part of the Hearing Panel's recommendations.

---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---

	<p>Means the systems, services, structures and networks necessary for operating and supplying essential utilities and services to the community including:</p> <ul style="list-style-type: none"> a. substations, transformers, lines and necessary and incidental structures and equipment for the transmissions and distribution of electricity; b. pipes and necessary incidental structures and equipment for transmitting and distributing gas; c. storage facilities, pipes and necessary incidental structures and equipment for the supply and drainage of water or sewage; d. water and irrigation races, drains, channels, pipes and necessary incidental structures and equipment (excluding water tanks); e. structures, facilities, plant and equipment for the treatment of water; f. structures, facilities, plant, equipment and associated works for receiving and transmitting telecommunications and radio communications; g. structures, facilities, plant, equipment and associated works for monitoring and observation of meteorological activities and natural hazards; h. structures, facilities, plant, equipment and associated works for the protection of the community from natural hazards; i. structures, facilities, plant and equipment necessary for navigation by water or air; j. waste management facilities; k. flood protection works; and l. anything described as a network utility operation in s166 of the Resource Management act 1991. <p>Utility does not include structures or facilities used for electricity generation, the manufacture and storage of gas, or the treatment of sewage.</p>
Vehicle Crossing	<p>Means the formed and constructed vehicle entry/exit from the carriageway of any road up to and including that portion of the road boundary of any site across which vehicle entry or exit is obtained to and from the site, and includes any culvert, bridge or kerbing.</p>
Verandah	<p>Means a roof of any kind which extends out from a face of a building and continues along the whole of that face of the building.</p>

	<p>Means the use of land or buildings for short-term, fee paying, living accommodation where the length of stay for any visitor/guest is less than 3 months; and</p> <ul style="list-style-type: none"> i. Includes such accommodation as camping grounds, motor parks, hotels, motels, boarding houses, guest houses, backpackers' accommodation, bunkhouses, tourist houses, lodges, homestays; and the commercial letting of a residential unit; and ii. May include some centralised services or facilities, such as food preparation, dining and sanitary facilities, conference, bar and recreational facilities if such facilities are associated with the visitor accommodation activity. <p>For the purpose of this definition:</p> <ul style="list-style-type: none"> a. The commercial letting of a residential unit in (i) excludes: <ul style="list-style-type: none"> • A single annual let for one or two nights. • Homestay accommodation for up to 5 guests in a Registered Homestay. • Accommodation for one household of visitors (meaning a group which functions as one household) for a minimum stay of 3 consecutive nights up to a maximum (ie: single let or cumulative multiple lets) of 90 nights per calendar year as a Registered Holiday Home. (Refer to respective definitions). b. "Commercial letting" means fee paying letting and includes the advertising for that purpose of any land or buildings. c. Where the provisions above are otherwise altered by Zone Rules, the Zone Rules shall apply²⁸.
Visitor Accommodation	
Wall Sign	Means a sign attached to a wall within the ground floor area ²⁹ .
Waste	Means any contaminant, whether liquid solid, gaseous, or radioactive, which is discharged, emitted or deposited in the environment in such volume, constituency or manner as to cause an adverse effect on the environment, and which includes all unwanted and economically unusable by-products at any given place and time, and any other matters which may be discharged accidentally or otherwise, to the environment. Excludes cleanfill.
Waste Management Facility	Means a site used for the deposit of solid wastes onto or into land, but excludes: <ul style="list-style-type: none"> a. sites situated on production land in which the disposal of waste generated from that land takes place, not including any dead animal material or wastes generated from any industrial trade or process on that productive land; b. sites used for the disposal of vegetative material. The material may include soil that is attached to plant roots and shall be free of hazardous substances and wastes; and c. sites for the disposal of clean fill.

^{28, 29} Greyed out text indicates the provision is subject to variation and is therefore is not part of the Hearing Panel's recommendations.

Waterbody	Means fresh water or geothermal water in a river, lake, stream, pond, wetland, or aquifer, or any part thereof, that is not located within the coastal marine area ³⁰ .
Wetland	Includes permanently or intermittently wet areas, shallow water, and land water margins that support a natural ecosystem of plants and animals that are adapted to wet conditions ³¹ .
Wholesaling (Airport Zones)	Means a business engaged in the storage and distribution of goods to businesses (including retail activities) and institutional customers.
Wind Electricity Generation	Means the conversion of the energy from wind into electricity, through the use of the rotational motion. A wind turbine may be attached to a building or freestanding. Wind turbine components may include blades, nacelle, tower and foundation. This definition shall include masts for wind monitoring.
Works Within the Root Protection Zone (For the Purpose of Chapter 32 only)	Means works including paving, excavation, trenching, ground level changes, storage of materials or chemicals, vehicle traffic, vehicle parking, soil compaction, construction activity, whether on the same site or not as the tree.
2037 Noise Contours	Means the predicted airport noise contours for Queenstown airport for the year 2037 in 1dB increments from 70dB L _{dn} to 55dB L _{dn} inclusive. Note: These contours shall be available from the council and included in the airport noise management plan.
2037 60 dB Noise Contours	Means the predicted 60 dB L _{dn} noise contour for Queenstown airport for 2037 based on the 2037 noise contours.

^{30, 31} From Section 2 of the Act

2.2 Acronyms Used in this Plan

Listed below are acronyms used within the plan. They do not include the acronyms of names of activity areas identified within structure plans adopted under the PDP.

AANC	Projected annual aircraft noise contour
AMI	Area median income
ANB	Air noise boundary
ASAN	Activity sensitive to aircraft noise
C	Controlled
CPI	Consumer price index
CPTED	Crime prevention through environmental design
dB	Decibels
D	Discretionary
GFA	Gross floor area
GHOA	Glenorchy Heritage Overlay Area
HD	Hanley Downs
LAR	Limited access roads
LENZ	Land Environments New Zealand
MHOA	Macetown Heritage Overlay Area
NC	Non-complying
NES	National Environmental Standard
NESETA	Resource Management (National Environmental Standard for Electricity Transmission Activities) Regulations 2009
NOR	Notice of requirement
NZTA	New Zealand Transport Agency
OCB	Outer control boundary
ONF	Outstanding natural feature
ONL	Outstanding natural landscape
P	Permitted
PR	Prohibited
PV	Photovoltaics
RCL	Rural character landscape

RD	Restricted discretionary
REG	Renewable electricity generation
RMA	Resource Management Act 1991
SAPS	Stand-alone power systems
SEL	Sound exposure level
SHOA	Skippers Heritage Overlay Area
SMLHOA	Sefferton and Moke Lake Heritage Overlay Area
SNA	Significant natural areas
UGB	Urban growth boundary

Appendix 2: Chapter 28 Natural Hazards as Recommended

28 NATURAL HAZARDS

28.1 Purpose

The purpose of this chapter is to provide a policy framework to address natural hazards throughout the District. The District is recognised as being subject to multiple hazards and as such, a key issue is ensuring that when development is proposed on land potentially subject to natural hazards, the risk is managed or mitigated to tolerable levels. In instances where the risk is intolerable¹, natural hazards will be required to be avoided. Council has a responsibility to address the developed parts of the District that are subject to natural hazard risk through a combination of mitigation measures and education, to lessen the impacts of natural hazards.

There are no rules in this chapter. It is intended to provide policy guidance on natural hazards that is factored into the consideration of land use and subdivision applications made under the rules in other chapters.

28.2 Natural Hazard Identification

Natural Hazards that exist in the District include:

- Flooding and inundation
- Erosion and deposition (including landslip and rockfall)
- Land instability
- Earthquakes and liquefaction
- Avalanche
- Alluvion², avulsion³
- Subsidence
- Tsunami / seiche⁴
- Fire

The District is located in an inland mountainous environment and as such can also be exposed to climatic extremes in terms of temperature, rain and heavy snowfall. This is likely to increase as a result of climate change.

Council holds information in a natural hazards database which has been accumulated over a long period of time by both the Council and the Otago Regional Council. The database is continually being updated and refined as new information is gathered. Given the ongoing updates occurring, with the exception of flooding information, which has historically been mapped, Council has decided not to map natural hazards as part of the District Plan. This decision has been made due to the fact the maps may quickly become out of date as new information becomes available. Council will rely upon the hazards database in the consideration of resource consents and building consents.

¹ The concept of risk 'tolerability' is derived from the Otago Regional Council's Regional Policy Statement, which provides additional guidance as to the management of natural hazards.

² Increase in the size of a piece of land due to deposits by a river.

³ Abandonment of a river channel and the formation of a new channel.

⁴ Oscillation of water due to earthquake shaking

The database is readily available to the public through the Council website and at Council Offices.

Additional to the Resource Management Act, Council has obligations to address hazards under other legislation such as the Building Act 2004, the Civil Defence and Emergency Management Act 2002 and the Local Government Act 2002. In particular the provisions of the Building Act provide Council with the ability to refuse to issue a building consent in certain circumstances where a property is subject to natural hazards. As such, Council uses the provisions in the District Plan as just one tool to address natural hazard risk.

28.3

Objectives and Policies

28.3.1 **Objective - The risk to people and the built environment posed by natural hazards is managed to a level tolerable to the community.**

Policies

28.3.1.1 Ensure assets or infrastructure are constructed and located so as to avoid or mitigate:

- a. the potential for natural hazard risk to human life to be exacerbated; and
- b. the potential risk of damage to property and infrastructural networks from natural hazards to the extent practicable, including consideration of the locational, technical and operational requirements of regionally significant infrastructure.

28.3.1.2 Restrict the establishment of activities which significantly increase natural hazard risk, including where they will have an intolerable impact upon the community and built environment.

28.3.1.3 Recognise that some areas that are already developed are now known to be subject to natural hazard risk and minimise such risk as far as practicable while acknowledging that the community may be prepared to tolerate a level of risk.

28.3.1.4 Enable Otago Regional Council and the Council exercising their statutory powers to undertake permanent physical works for the purposes of natural hazard mitigation while recognising the need to mitigate potential adverse effects that may result from those works.

28.3.2 **Objective - Development on land subject to natural hazards only occurs where the risks to the community and the built environment are appropriately managed.**

Policies

28.3.2.1 Avoid significantly increasing natural hazard risk.

28.3.2.2 Not preclude subdivision and development of land subject to natural hazards where the proposed activity does not:

- a. accelerate or worsen the natural hazard risk to an intolerable level;
- b. expose vulnerable activities to intolerable natural hazard risk;
- c. create an intolerable risk to human life;
- d. increase the natural hazard risk to other properties to an intolerable level;
- e. require additional works and costs including remedial works, that would be borne by the public.

28.3.2.3 Ensure all proposals to subdivide or develop land that is subject to natural hazard risk provide an assessment that meets the following information requirements, ensuring that the level of detail of the assessment is commensurate with the level of natural hazard risk:

- a. the likelihood of the natural hazard event occurring over no less than a 100 year period;
- b. the type and scale of the natural hazard and the effects of a natural hazard on the subject land;
- c. the effects of climate change on the frequency and scale of the natural hazard;
- d. the vulnerability of the activity in relation to the natural hazard;
- e. the potential for the activity to exacerbate the natural hazard risk both within and beyond the subject land;
- f. the potential for any structures on the subject land to be relocated;
- g. the location, design and construction of buildings and structures to mitigate the effects of natural hazards, such as the raising of floor levels;
- h. management techniques that avoid or manage natural hazard risk to a tolerable level, including with respect to ingress and egress of both residents and emergency services during a natural hazard event.

Advice Note:

Council's natural hazards database identifies land that is affected by, or potentially affected by, natural hazards. The database contains natural hazard information that has been developed at different scales and this should be taken into account when assessing potential natural hazard risk. It is highly likely that for those hazards that have been identified at a 'district wide' level, further detailed analysis will be required.

28.3.2.4 Where practicable, promote the use of natural features, buffers and appropriate risk management approaches in preference to hard engineering solutions in mitigating natural hazard risk.

28.3.3 Objective - The community’s awareness and understanding of the natural hazard risk in the District is continually enhanced.

- Policies
- 28.3.3.1** Continually develop and refine a natural hazards database in conjunction with the Otago Regional Council.
 - 28.3.3.2** When considering resource consent applications or plan changes, the Council will have regard to the natural hazards database.
 - 28.3.3.3** Ensure the community has access to the most up-to-date natural hazard information available.
 - 28.3.3.4** Increase the community awareness of the potential risk of natural hazards, and the necessary emergency responses to natural hazard events.
 - 28.3.3.5** Monitor natural hazard trends and changes in risk and consider action should natural hazard risk become intolerable.

28.4 Other Relevant Provisions

28.4.1 District Wide Rules

Attention is drawn to the following District Wide chapters.

1	Introduction	2	Definitions	3	Strategic Direction
4	Urban Development	5	Tangata Whenua	6	Landscapes and Rural Character
25	<i>Earthworks</i>	26	Historic Heritage	27	Subdivision
29	<i>Transport</i>	30	Energy and Utilities	31	<i>Signs</i>
32	Protected Trees	33	Indigenous Vegetation	34	Wilding Exotic Trees
35	Temporary Activities and Relocated Buildings	36	Noise	37	Designations
	Planning Maps

Appendix 5: Text that might form basis of a variation amending the definition of “Recession Lines/Recession Plane”

Recession Line/Recession Plane Definition:

Means a line drawn from a point 2.5 metres above a site boundary at right angles inward from the boundary, inclining at an angle that varies from the horizontal according to the extent to which the site is orientated to true north. The combination of recession lines drawn along the site boundary creates the recession plane. See interpretive diagrams below and use the recession plane wheel to calculate the angle of inclination relevant to each site boundary.

Instructions:

The recession plane angle is dependent on which boundary of the site (i.e. north, south, east or west) the recession plane originates from. To determine what angle applies to each boundary – use the recession plane wheel on the site plan:

Step 1: Place the wheel in the centre of the site on the site plan, with both the wheel and site plan aligned true north. Keep both aligned in this way at all times.

Step 2: Move the wheel toward a boundary until the boundary first touches the edge of the inner circle of the wheel.

Step 3: Look at which quadrant of the wheel the boundary in question primarily passes through – this will confirm the recession plane angle applicable to that boundary.

Note: If the boundary is centred on the line between two quadrants (i.e. it could be either orientation), the more restrictive (lower angle) recession plane angle will apply.

Appendix 1: Amended Planning Maps

1. PRELIMINARY MATTERS

1.1. Introduction

1. This hearing considered submissions and further submissions relating to Hearing Stream 13, Queenstown mapping. This stream is concerned with rural and urban zones and planning map notations covered in the PDP (i.e., in Stage 1) in the Wakatipu Ward, excluding the Wakatipu Basin (as defined by the Shotover and Kawarau Rivers and the ONL boundary around the Basin) and the Crown Terrace.
2. The format of our reports is that, in this report we canvas some preliminary issues by way of overview, before addressing submissions related to zoning and/or planning map notations such as the location of ONL, ONF and SNA lines in a further 11 reports.
3. Generally submissions are considered individually. However, in three instances we have grouped submissions for our discussion. A number of submissions relate to the area we have referred to as Frankton North (northern side of SH6 from Hansen Road to Ferry Hill Drive) and these are addressed as a group. Similarly, submissions in the Queenstown Town Centre and in the vicinity of McBride Street, Frankton, are grouped together.

1.2. Terminology in Reports 17-1 to 17-12

4. Throughout these reports, we use the following abbreviations:

Act	Resource Management Act 1991
AMUZ	Airport Mixed Use Zone ¹
AZ	Airport Zone
BMUZ	Business Mixed Use Zone
Clause 16(2)	Clause 16(2) Of the First Schedule to the Act
Council	Queenstown Lakes District Council
DCM	Dwelling Capacity Model
HDRZ	High Density Residential Zone
LDRZ	Lower Density Suburban Residential Zone ²
LINZ	Land Information New Zealand
LSCZ	Local Shopping Centre Zone
LTP	Long Term Plan, Queenstown Lakes District Council
MDRZ	Medium Density Residential Zone

¹ This was the name given to the zone as notified.

² Noting that, as notified, this zone was called Low Density Residential

NPSUDC 2016	National Policy Statement on Urban Development Capacity
NPSET 2008	National Policy Statement for Electricity Transmission 2008
NPSFM 2014	National Policy Statement for Freshwater Management 2014
NZTA	New Zealand Transport Authority
NZIA	NZIA Southern Branch and Architecture + Southern Women
ONF	Outstanding Natural Feature(s)
ONL	Outstanding Natural Landscape(s)
PDP	Stage 1 of the Proposed District Plan for Queenstown Lakes District as publicly notified on 26 August 2015
PRPS	the Proposed Regional Policy Statement for the Otago Region dated 1 October 2016, unless otherwise stated
QAC	Queenstown Airport Corporation
QLDC	Queenstown Lakes District Council (or 'the Council')
QPL	Queenstown Park Ltd
QTCZ	Queenstown Town Centre Zone
RCL	Rural Character Landscape
RPL	Remarkables Park Ltd
RPS	the Operative Regional Policy Statement for the Otago Region dated October 1998
RZ	Rural Zone
RRZ	Rural Residential Zone
RLZ	Rural Lifestyle Zone
RVZ	Rural Visitor Zone
SASZ	Ski Area Sub-Zone
Stage 2 Variations	The variations, including changes to the existing text of the PDP, notified by the Council on 23 November 2017
UGB	Urban Growth Boundary

VASZ Visitor Accommodation Sub-Zone

WCO Water Conservation Order made under Part 9 of the Act

1.3. Topics considered

5. The subject matter of this hearing (Stream 13) was the submissions made in relation to the PDP Planning Maps for that part of the District within the catchment of the Kawarau River generally excluding the area subject to the Wakatipu Basin Planning Study³ and the Arrowtown urban area. The exceptions to this exclusion were submissions relating to land in Tucker Beach Road where submitters requested they be heard in Stream 13⁴. Accordingly, it encompassed submissions on Planning Map 6, part of Planning Map 7, Planning Map 9, part of Planning Map 10, Planning Map 12, part of Planning Map 13, including 13a and 13b, Planning Maps 14 and 15, 25, part of each of Planning Maps 26, 29, 30, 31 and 31a, and Planning Maps 32, 33, 34, 35, 36, 37, 38 and 39.
6. The area subject of the hearing included the urban areas of Queenstown Hill, central Queenstown, Fernhill, Frankton, Arthurs Point, Kelvin Heights, Glenorchy and Kingston. It also included the rural areas on both sides of Lake Wakatipu and south of the Kawarau River, the Gibbston Valley area to the boundary of the District at Roaring Meg. The SASZs (Soho/Cardrona, Coronet Peak and Remarkables⁵) were excluded as the submissions on those areas were heard separately in the Stream 11 Hearing and are the subject of a separate report⁶.
7. The subject of the hearing related to requests to extend or create new urban areas, often accompanied by requests to alter the location of UGBs and ONL/ONF lines, change the zoning within urban areas, create bespoke zoning for rural land, rezoning rural land for rural living purposes, along with minor adjustments of the application of zonings. In addition, associated with the hearing of submissions in relation to 1 Hansen Road, Frankton, we heard submissions on the zone provisions specific to that site which had been transferred to us from the Stream 8 hearing⁷.

1.4. Hearing arrangements

8. The Stream 13 hearing was held in Queenstown over 25 days, commencing on Monday, 24 July 2017 and ending on 13 September 2017. Due to one of the Panel members suffering a bereavement, it was necessary to adjourn the hearing from 27 July 2017 to 7 August 2017. This unforeseen circumstance involved the re-arrangement of the hearing schedule which required the co-operation of the Council and submitters and their representatives. We wish to thank those people for their understanding.

9. The parties we heard from were:

³ The area of this Planning Study has been rezoned by Variation 2 and is therefore outside the scope of this report.

⁴ Variation 2 proposes rezoning some of the land in Tucker Beach Road that were the subject of submissions heard in Stream 13. We discuss this below, but essentially, we make no recommendations in respect of those submissions or parts of submissions subject to Variation 2.

⁵ The submission on the Remarkables SASZ also sought to extend this onto an area adjoining SH6. That also was dealt with in Stream 11 and is dealt with in Report 15.

⁶ Recommendation Report 15

⁷ Minute Directing that Certain Submissions be Transferred to Mapping Hearings, dated 2 December 2016

11. A brief of evidence by Grant Bulling was tabled on 7 September 2017 in support of Submissions 503 and 506.
12. Evidence was received after parties had been heard as follows:
 - a. From QAC⁷⁸:
 - i. Memorandum of Counsel dated 18 August 2017 explaining QAC's position regarding the residential use of 1 Hansen Road;
 - ii. Memorandum of Counsel dated 25 August 2017 providing noise monitoring results requested by the Panel.
 - b. From Universal Developments Limited & Ors⁷⁹:
 - i. Memorandum of Counsel dated 22 August 2017 providing information requested by the Panel related to vehicle access limitations, internal roading and revised building height provisions.
 - c. From Middleton Family Trust⁸⁰:
 - i. An Addendum to Mr Geddes evidence lodged on 18 August 2017 providing suggested provisions for inclusion in Chapters 7 and 27.
 - d. For Oasis in the Basin Association⁸¹:
 - i. Supplementary Attachment D to Mr Skelton's evidence, dated 22 August 2017.
 - e. For Queenstown Lakes District Council⁸²:
 - i. Information requested by the Panel showing possible subdivision plans for Vancouver Drive land and an image of the Kerry Drive site showing the pedestrian page and zoning overlays, lodged on 28 August 2017.
 - f. For DJ and EJ Cassells and Ors⁸³:
 - i. A Memorandum of Counsel dated 13 September 2017 answering our questions as to the workability of the provisions proposed by the submitters.
 - g. For Jardine Family Trust and Remarkables Station Limited⁸⁴:
 - i. Memorandum from Lowe Environmental Impact Ltd to Nick Geddes dated 22 August 2017 in response to our questions concerning on-site effluent disposal.
 - ii. Memorandum of Traffic Conferencing dated 5 September 2017
 - h. For Jacks Point Residents and Owners Association⁸⁵:
 - i. Supplementary Evidence of Mr Gousmett in response to the Memorandum of Lowe Environmental Impact Ltd to Nick Geddes above.
 - ii. For Gibbston Valley Station Limited⁸⁶:

⁷⁷ Submission 806 and Further Submission 1097

⁷⁸ Submission 433 and Further Submission 1340

⁷⁹ Submissions 751, 847, 399, 717 and 177

⁸⁰ Submission 338

⁸¹ Further submission 1289

⁸² Submission 790

⁸³ Submissions 503 and 506

⁸⁴ Submission 715

⁸⁵ Further Submission 1277

⁸⁶ Submission 827

- iii. Draft Standards and a copy of the proposed Structure Plan, lodged on 4 September 2017;
 - iv. A Joint Witness Statement of Messrs Giddens and Buxton dated 9 October 2017.
- i. For Hensman and Ors⁸⁷:
- i. An undertaking offered by Scope Resources Limited to not implement land use consent RM070294 pending the decision of the Council on Submission 361;
 - ii. A Joint Witness Statement of Ms Hutton and Mr Buxton setting out the results of their caucusing, dated 15 September 2017.
 - iii. A revised version of the proposed Coneburn Industrial Zone prepared by Ms Hutton following the caucusing.
 - iv. A letter from Mr Bartlett dated 15 September 2017 confirming that his traffic assessment remained unaltered as a result of the amendments suggested in the Joint Witness Statement.
13. In addition to the parties who appeared, evidence was tabled by Don Lawrence⁸⁸ and Z Energy Limited⁸⁹. A brief of evidence was lodged by Mr Vivian in support of a submission by Lloyd James Vient, Arcadia Station⁹⁰. This submission was in support of the Arcadia Rural Visitor Zone, which was not part of Stage 1. By email dated 28 August 2017, Mr Vivian withdrew the submission (and the evidence) and vacated the hearing time allocated.
14. Prior to the hearing, the we visited all of the submission sites and the neighbourhoods of those sites. Site visits were carried out over seven consecutive working days, commencing on Monday 10 July 2017 and concluding on Tuesday, 18 July 2017. Richard Kemp, a consultant, assisted the panel by arranging these visits. Mr Kemp's assistance was limited to logistics and IT support (e.g., use of GPS to identify property boundaries) and he took no part in discussions on the planning issues raised in submissions as required by the terms of the confidentiality agreement accompanying his appointment. We were also assisted by consultants/parties. However this assistance was limited to OSH matters, driving us around and pointing out features of the site shown/referred to in submission. No discussion of the evidence or merits of the submissions or further submissions took place on these familiarisation visits.
15. From time to time during the hearing, we revisited some sites and/or neighbourhoods.
- 1.5. Procedural Issues:**
16. Over 255 submitters and further submitters were listed for hearing in this Hearing Stream, covering over 930 submission points. To assist programming the hearing of submissions, we issued a Minute on 7 February 2017 providing an indication that the hearings would commence in July 2017 and requesting indications from submitters:
- a. whether they intended to appear or not;
 - b. if appearing the number of persons presenting to the Panel and their expertise; and
 - c. an indication of the time likely to be required to present their case, in the knowledge that evidence would be pre-lodged and read in advance by the Panel.
17. Utilising the information provided by the submitters, the Chair issued a Minute on 11 April 2017 attaching an indicative hearing schedule and making directions for the release of Section 42A Reports (25 May 2017), the date for lodgement of submitter evidence (9 June 2017), the date for the Council to lodge development capacity outputs and associated evidence (16 June

⁸⁷ Submission 361
⁸⁸ Submission 16
⁸⁹ Submission 312
⁹⁰ Submission 480

2017), the date for the lodgement of rebuttal evidence (7 July 2017), and advising of the arrangements being made for site visits.

18. Following release of the indicative hearing timetable various requests were made by submitters for amended times, or to be included. The various amendments to accommodate these requests were set out in the Chair's Tenth Procedural Minute dated 22 May 2017, along with a revised hearing schedule.
19. In addition to these Minutes dealing with the general process, the following were also issued:
 - a. In a Minute dated 8 February 2017 the Chair advised Aurora Energy Ltd that whether it should present evidence in Stream 13 or not was the submitter's decision.
 - b. In a Minute dated 28 February 2017, we directed that Submission 338 and that part of Submission 501 which sought to rezone land around Lake Johnson and Hansen Road be heard in Stream 13.
 - c. In a Minute dated 6 March 2017 we declined an application by Bridesdale Farm Developments Ltd, Shotover Country Ltd, Michaela Meehan, Private Property Ltd and Ayrburn Farm Estate Ltd to have their submissions heard in Stream 13 as they were within the Wakatipu Basin and would more logically be heard in the hearing of submissions related to that area.
 - d. In a Minute dated 30 March 2017 we requested the Council consider a timetable which would enable sufficient time for submitters to lodge rebuttal evidence in respect of the Council's DCM evidence.
 - e. In a Minute dated 5 May 2017 we extended the time Skyline Enterprises Ltd had to lodge certain evidence if an Environment Court hearing the relevant witnesses were involved in, extended into an additional week.
 - f. In a Minute dated 5 May 2017 we sought clarification from the Council as to the boundary between the Queenstown Mapping Stream and the Wakatipu Basin, and the Council's position on a request for certain submission points to be transferred to the Wakatipu Basin Stream.
 - g. In a Minute dated 12 May 2017 we clarified the hearing process we expected to follow in respect of certain further submissions lodged by RPL and QPL.
 - h. In a Minute dated 12 May 2017 we enquired of two submitters whose submissions related to land in Tucker Beach Road (J Waterson; and K Hindle & D Wright) whether they wished to be heard in Stream 13 or the Wakatipu Basin Hearing Stream.
 - i. In a Minute dated 15 May 2017 we provided the Council and RPL with an opportunity to comment on a memorandum filed by QAC seeking directions limiting the scope of evidence and argument that RPL could present in the Stream 13 hearing in relation to the extent of the Airport Mixed Use Zone as it applied to Queenstown Airport. The result of this Minute was a Joint Memorandum from Counsel for QAC, RPL and the Council dated 19 May 2017 requesting that the Panel make its decision on the extension of the Airport Mixed Use Zone on the basis of the information received in the Chapter 17 hearing in December 2016. We confirmed that we would follow this course in a Minute dated 19 May 2017.
 - j. In a Minute dated 17 May 2017 we transferred the relevant submission points for Submissions 500, 467, 473 and 310 to the Wakatipu Basin Hearing Stream, and confirmed that Submission 476 would remain in Stream 13.
 - k. In a Minute dated 17 May 2017 we declined a request to transfer Submission 338 to the Wakatipu Basin Hearing Stream.
 - l. In a Minute dated 23 May 2017 we granted an extension of time to lodge evidence to the Trustees of Lakeland Park Christian Camp.

- m. In a Minute dated 29 May 2017 we agreed to QAC's request to file a single brief of evidence for each expert, notwithstanding those briefs would relate to 33 individual zoning requests.
- n. In a Minute dated 29 May 2017 the Chair clarified that it was permissible for a submitter to seek the application of an ODP zone to land as part of this process.
- o. In a Minute dated 8 June 2017 the Chair clarified that a submission seeking a change of zoning from Rural to Rural Visitor Zone was "on" the PDP, but that the Rural Visitor Zone was not part of the PDP notwithstanding that the zoning was shown for information purposes on the notified Planning Maps.
- p. In a Minute dated 9 June 2017 we granted an extension to lodge evidence from specified submitters to noon on Monday 12 June 2017.
- q. In a Minute dated 26 June 2017 we removed the hearing time allocation for Submission 354 as that submission had been withdrawn in Hearing Stream 6.
- r. In a Minute dated 26 June 2017 we changed the date we requested legal submissions be filed in advance to 14 July 2017.
- s. In a Minute dated 7 July 2017 we granted a late request by Jacks Point Residents and Owners Association for hearing time in respect of Further Submission 1277.
- t. In a Minute dated 15 July 2017 we granted requests by RPL, QPL and Gibbston Valley Station Limited to file legal submissions at later dates.
- u. In a Minute dated 15 July 2017, we granted a request by Jacks Point Residents and Owners Association (FS1277) and Jacks Point group (FS1275) for a 30 minute hearing slot; and declined a request to amend each further submission in opposition to Submission 361 by extending the reasons for the opposition.
- v. In a Minute dated 21 July 2017, we advised the Council that we had no questions for: Dr Chiles; Mr Clarke; Dr Lloyd; or Mr Watts.
- w. In a Minute dated 6 August 2017 we granted leave for F S Mee Developments Co Limited to file a late request for a hearing time and to file late evidence.
- x. In a Minute dated 15 August 2017 we confirmed a timetable for the receipt of additional information offered by Jardine Family Trust & Remarkables Park Station Ltd.
- y. In a Minute dated 2 September 2017 we amended the timetable for the receipt of additional information from Jardine Family Trust & Remarkables Park Station Ltd.
- z. At the hearing, on 1 September 2017, Ms Macdonald, counsel for Submitter 361, applied to strike out Further Submissions 1275 and 1277 on the grounds they had not been served on the submitter as required by the Act. In a Minute dated 13 September 2017, we requested proof from Further Submitters 1275 and 1277 that the further submissions had been filed on Submitter 361. A memorandum of counsel for Further Submitters 1275 and 1277 received on 20 September 2017 attached a copy of an email sent on Friday 18 December 2015 to, among others, Ms Macdonald attaching the further submissions of Further Submitter 1275. This memorandum, out of an abundance of caution, also sought a waiver to serve FS1277 late as counsel could not find proof of service. In a decision dated 9 October 2017 the Chair granted the waiver of service sought in respect of Further Submission 1277.
- aa. By a memorandum of counsel dated 14 September 2017, F S Mee Developments Co Limited⁹¹ sought leave to either amend Submission 425 or to file a late submission so as to enable consideration by the Panel of a zoning outcome addressed at the hearing which fell outside scope of the submission as lodged. By a decision of the Chair made on 20 September 2017 this application was refused.
- bb. By a Minute dated 27 September 2017 we asked all submitters who sought the inclusion of structure plans or partial rezoning of their site to provide digital copies of the changes

⁹¹ Submission 425

sought so that they could be included in the Council GIS if we were minded to recommend acceptance of the relevant submissions.

- cc. By a Minute dated 29 September 2017 we requested a joint witness statement from Messrs Giddens and Buxton concerning provisions sought by Gibbston Valley Station Limited.
- dd. By a Minute dated 29 September 2017 we granted an extension of time to the Council to file its reply in respect of the submission by Gibbston Valley Station Limited.
- ee. By a Minute dated 16 October 2017 we sought clarification from Council of the zoning status of the Kerry Drive reserve subject to Submission 790, in the light of the forthcoming variation.
- ff. By a Memorandum dated 2 November 2017 the Council advised that the draft maps the Panel had been provided with the Reply evidence had incorrectly shown the Kerry Drive reserve as subject to the proposed Open Space Zone. The Memorandum also identified that a piece of land known as the Commonage was also incorrectly shown as proposed Open Spaces Zone on those draft maps.
- gg. In a Memorandum dated 14 December 2017 the Council provided an updated Table of Recommendations to Group 1B Submissions.
- hh. In a Memorandum dated 9 February 2018, counsel for the Council drew our attention to the recent decision of the High Court in *Royal Forest and Bird Protection Society Inc v Bay of Plenty Regional Council*.⁹²

1.6. Stage 2 Variations

- 20. On 23 November 2017, the Council notified the Stage 2 variations to the District Plan. In relation to the Queenstown Mapping Hearings, this included:
 - a. The rezoning of most Council-owned reserve land to one of eight Open Space zones or sub-zones;
 - b. The rezoning of the land zoned Rural, Rural Lifestyle and Rural Residential (and their respective sub-zones) within the Wakatipu Basin to Wakatipu Basin Rural Amenity Zone, with some portions being in the Wakatipu Basin Lifestyle Precinct sub-zone;
 - c. The application of Visitor Accommodation Sub-Zone onto various Planning Maps.
- 21. By virtue of Clause 16B(1) of the First Schedule to the Act, submissions on any provision the subject of a variation are automatically carried over to the hearing of the variation.
- 22. Counsel for the Council filed a memorandum dated 23 November 2017 advising the Hearing Panel on the effect of notification of the PDP Variation 2 and stage 2, advising among other things that:
 - a. The submission of Skyline Enterprises Limited⁹³ (and the relevant further submissions⁹⁴) in relation to a sub-zone sought to be applied to the land occupied by the Skyline Gondola and associated terminal activities should be treated as transferred⁹⁵;
 - b. That the submission by Middleton Family Trust⁹⁶ as it related to the Trust's land notified as Rural within the Rural Landscape Classification⁹⁷ was to be treated as transferred;

⁹² [2017] NZHC 3080

⁹³ Submission 574

⁹⁴ FS1063 and FS1370

⁹⁵ There is actually a small area of land outside the land rezoned by the Stage 2 Variations which we deal with in Report 17-2

⁹⁶ Submission 338

⁹⁷ Confirmed in Memorandum of counsel dated 18 December 2017

- c. Various other submissions⁹⁸ relating to land in Tucker Beach Road should be treated as transferred;
23. Submissions seeking imposition of Visitor Accommodation zoning over land not currently so zoned would be able to be made as part of the Stage 2 process, so long as the land concerned is the subject of either Stage 1 or Stage 2 of the District Plan Review⁹⁹. We had several submissions before us in this category, and we have factored that information into our consideration of them.
- 1.7. Format of Stream 13 Reports**
24. The number of submissions required to be considered in this hearing stream, and the extent of the cases advanced by a number of submitters means that it is impractical for us to report to Council on all of the matters we heard in one report. We have therefore adopted the following approach to drafting our reports:
- a. This report canvasses the background to the Stream 13 hearing, the parties we heard, the procedural directions made, and the general approach adopted to our considerations of the submissions we heard;
 - b. Separate Reports consider and make recommendations on specific requests for rezoning or map amendments. These are ordered geographically and each report contains several sections, each dealing with individual sites or groups of sites:
 - i. Report 17-2: Central Queenstown;
 - ii. Report 17-3: Fernhill;
 - iii. Report 17-4: Arthurs Point;
 - iv. Report 17-5: Queenstown Hill;
 - v. Report 17-6: Frankton – Lake Johnson - Tucker Beach Road;
 - vi. Report 17-7: Kelvin Peninsula;
 - vii. Report 17-8: Coneburn Valley – Queenstown Park – Jacks Point;
 - viii. Report 17-9: Wye Creek – Kingston;
 - ix. Report 17-10: West side of Lake Wakatipu;
 - x. Report 17-11: Closeburn to Kinloch;
 - xi. Report 17-12: Gibbston Valley
 - c. In each of these reports we have not undertaken a separate Section 32AA analysis. Rather, our analysis in terms of the requirements of that section is set out in the body of the report where we discuss the recommended changes. That includes those instances where we recommend the inclusion of additional provisions in the text of the PDP.
 - d. Where we do make recommendations that additional provisions be included in the text of the PDP, we make those recommendations to the Council after having consulted the Hearing Panel that heard the submissions on the relevant chapter to ensure consistency of provisions, style and appropriate location of the provisions.

2. APPROACH TAKEN WHEN CONSIDERING SUBMISSIONS

2.1. General Approach to Rezoning Applications:

25. The tests to be employed in finalising the terms of the PDP are outlined in Report 1. We refer to and rely on that discussion.
26. The current context (submissions on the planning maps) raises particular issues that require some discussion at a general level. Most of the submissions we had to consider sought a different zoning for land from that shown on the planning maps. Where submissions also

⁹⁸ Submissions 501, 310, 396, 467, 500 and 473.

⁹⁹ Counsel for the Council's Memorandum dated 23 November 2017 at [13]

sought alteration of ONL/ONF/RCL boundaries, or SNAs or the UGB we have dealt with that in the same report as the zoning request, but treating the matters as separate issues.

27. In relation to rezoning applications, counsel for the Council submitted to us that our recommendations “must consider whether the zone assists the Council to carry out its functions in order to achieve the purpose of the Act, and whether the zone is in accordance with Part 2 of the RMA.”¹⁰⁰
28. We understand that there is no presumption that the notified zone is the most appropriate, and Ms Scott confirmed that proposition, but submitted that submitters still needed to provide a level of detail and analysis that corresponded to the scale and significance of the environmental effect anticipated from the implementation of the new zone¹⁰¹.
29. While there is no presumption in favour of the notified PDP, it has been the subject of extensive analysis under section 32, and to the extent that the Council position before us was to support the existing notified zoning, it provided further evidence supporting that initial section 32 analysis.
30. Any change in zoning of land from that shown in the planning maps requires evaluation under Section 32AA.
31. If the only material we had before us was the existing Section 32 analysis and further Council evidence supporting the notified zoning, we have no basis on which to undertake the required Section 32AA evaluation in respect of any alternative zoning and must necessarily recommend rejection of any submissions seeking an alternative zoning¹⁰².
32. The practical application of these principles means that for the large number of submissions seeking rezoning where the submitter did not appear and call evidence as to why their submission should be accepted and the evidence for the Council recommends rejection of the submission, we have necessarily been put in the position where acceptance of that recommendation is the only position open to us. The only potential exception would be if the material provided as part of the original submission was sufficiently extensive that it provided the basis for a Section 32AA evaluation of the alternative rezoning sought. While some submissions did indeed include a substantial volume of material supporting the requested relief, by and large, these were the submissions that were the subject of evidence before us.
33. In each of those instances we have set out in our reports our assessment of whether adequate information was provided.
34. We also note that the evidence for Council does not have any head-start over the evidence for any other party. It is the cogency of the evidence when considered within the framework of legal tests we have to apply that counts. Among other things, that means that where the evidence for Council supports a rezoning proposal, we have to be satisfied that the reasoning prompting a change of position on the part of Council is sound, just as we would need to be satisfied that the evidence for a submitter should be preferred to the analysis set out in the section 32 reports supporting the notified zoning. In some instances where the Council

¹⁰⁰ Opening Legal Submissions for Queenstown Lakes DC, Stream 13 – Queenstown Mapping, 21 July 2017 at paragraph 2.1

¹⁰¹ Ibid at paragraph 3.3

¹⁰² This is a specific example of the principles discussed in Recommendation Report 3 related to the Strategic Chapters of the PDP, at paragraphs 30-33

position has changed to one of full or partial support for the requested rezoning in response to the evidence of the submitter, we have disagreed with both the Council and the submitter, and recommended rejection of the submission or an outcome between that recommended by the Council and that sought by the submitter(s).

2.2. Relevance of higher order provisions to our inquiry:

35. The first general point that we should address relates to the practical application of the section 32 tests to a rezoning proposal. The zones shown on the planning maps are provisions of the PDP. Sitting behind those provisions, there is a suite of objectives and policies that vary according to the zone identified on the planning maps. Sitting at a higher level, Chapters 3-6 of the PDP provide strategic direction and contain higher level objectives and policies.
36. Above the strategic objectives and policies in Chapters 3-6 again, there are the higher-level documents that we need to factor into our decision making, giving effect to some (the Operative RPS and higher still, National Policy Statements) and having regard to others (in particular, the Proposed RPS and the Iwi Management Plans). Above them all, there is the purpose of the Act, which any objectives are measured against, supported by the balance of Part 2 of the Act.
37. The particular question that requires consideration in the context of rezoning applications is, when section 32(1)(b) talks about examining whether the provisions in a proposal are the most appropriate way to achieve the objectives, which objectives are relevant for this purpose?
38. Recommendation Report 1 discusses the extent to which the Hearing Panels considering the provisions of the PDP seeking to implement the strategic direction provided by Chapters 3-6 should go beyond the strategic chapters into an inquiry as to the implications of the higher-level documents and other statutory provisions. It concludes that while the intention of the Hearing Panel making recommendations on Chapters 3-6 is that they faithfully reflect the legal requirements in the Act as regards higher level documents and other guidance, those recommended provisions are necessarily not 'settled' and accordingly, reference is required back to the higher-level provisions. Specifically, in relation to Part 2 of the Act, the Hearing Panel has to consider whether the strategic directions are complete, clear and in accordance with the legal requirements¹⁰³. We do not therefore, need to discuss those matters further.
39. The issue for us is whether, when measuring the appropriateness of particular zonings, the reference point is the objectives of the relevant zone, or the objectives of the strategic chapters, or both.
40. We accept counsel's submission when comparing two or more zones and deciding on which is the most appropriate, that comparison cannot be completed in isolation from the provisions within the zones themselves, but the objectives and policies (methods) in a particular zone should reflect the broader objective and policies located in Chapters 3 to 6¹⁰⁴.

2.3. Site specific plan provisions:

41. Thus far, our reasoning reflects the relatively simple case where a submission seeks to employ an existing zone in the PDP without amendment. That was not, however, the position that

¹⁰³ The decision of the High Court in *Royal Forest and Bird Protection Society Inc v Bay of Plenty Regional Council* noted above would appear to confirm that this approach is correct, at least as regards higher order National and Regional Policy Statements.

¹⁰⁴ Opening Legal Submissions for Queenstown Lakes DC, Stream 13 – Queenstown Mapping, 21 July 2017 at paragraphs 3.1 and 3.2

applied to several submissions we heard which sought a site specific zone, or the inclusion of site specific assessment matters or controls. In addition, there were instances where submissions on notified site specific provisions had been deferred to be heard in this Hearing Stream in conjunction with submissions seeking rezoning.

42. Submissions seeking a new zone of their own specification reinforces the need to look beyond the immediate objectives a zone seeks to implement, to the strategic direction of the PDP (and higher). Looking solely at the zone provisions the submitter had drafted would be an entirely circular exercise since they were obviously designed to facilitate the activities the zone provides for.
43. While no issue can be taken regarding the jurisdiction to insert site-specific Plan provisions if a submission seeks that relief, a proliferation of such site-specific provisions raises issues in terms of Plan administration.
44. One of the features of the ODP is the extent to which it already provides, through the mechanism of a series of 'special' zones, bespoke planning provisions for particular areas of the district. Most, but not all of those special zones have been reserved for subsequent stages of the District Plan review process¹⁰⁵ and so we do not know whether and to what extent that position will be perpetuated. What we do know, however, is that to the extent existing special zones have been rolled over (in Chapters 41-43 of the PDP), those provisions provide a precedent for what the submitters before us were seeking.
45. Accordingly, we do not think an objection in principle to site specific planning provisions could be sustained. Having said that, however, this is a matter of scale and degree. At a certain point, there are so many site-specific planning provisions that a plan loses overall direction and coherence. It also expands in size as general provisions affecting large-areas are replaced or overlaid in respect of relatively small areas – often a single site. Even in an age where increasing use of electronic documents is becoming the norm, this affects the usability of the PDP.
46. In Section 32 terms, these issues affect the efficiency of the provisions in achieving the objectives.
47. Another issue that arose under this heading was those submissions seeking the application of the ODP Rural Visitor Zone to their land. We have noted above the two Minutes issued in May and June 2017 dealing with the question of whether a submission could seek the application of the ODP Rural Visitor Zone to land notified as Rural in the PDP. The first Minute set out the following as the approach to be used in such an assessment:

"4 ... if a submitter seeks to zone the land using a set of provisions that are not one of the Stage 1 zones, that submitter would need to show how those provisions fit within the overall strategic directions chapters of the PDP. If the provisions do not give effect to and implement the strategic directions chapters, it would likely be difficult to conclude that they were the most appropriate way to achieve the objectives in those chapters.

5 Where a submitter has chosen to identify an ODP zoning, such as the Rural Visitor Zone, as the set of provisions as being appropriate, that test of giving effect to and implementing the strategic directions chapters remains relevant. In addition, there are

¹⁰⁵ The Council's website advises that a number of Special zones will be the subject of Stage 4 of the District Plan Review, with notification targeted for the second quarter of 2019.

two matters that submitters need to consider in seeking the implementation of an ODP zone. First, there is no evidence that those ODP zones will become part of the PDP. Second, the Hearing Panel would need to understand the entire objective, policy and rule framework proposed so the Panel can understand what actual and potential effects on the environment the rezoning would have and whether that was consistent with the overall objectives and policies of the PDP. I can foresee difficulties in this regard if a submitter seeks to rely on ODP provisions unaltered, as the entire structure of the PDP is different.

6 *This approach means that is open to submitters to seek to apply a zone that is not in those presently part of Stage 1 of the PDP, but they must provide a solution that fits within the PDP. It also means that it is not open to the Council to say that the submission cannot be considered because an ODP zone is sought, at least not at the s.42A report stage. If a submitter fails to file evidence showing how the provisions sought fit within the PDP and relies solely on ODP zone provisions, then the Council is fully entitled to adduce rebuttal evidence identifying aspects of those provisions that do not give effect to and implement the PDP higher order objectives and policies.”*

48. We did not understand that approach to be questioned by the Council or submitters.
49. Our approach to this question has been to hear submissions and evidence on requests to apply a rezoning in a consistent manner, whether the rezoning sought was one of the zones notified in the PDP, a zone applied in the ODP or a proposed new zone. In each case we have, as discussed above, considered whether the proposed provisions gave effect to and implemented the strategic direction chapters, and the likely effect on the environment of applying the proposed zone. We have also considered whether the proposed provisions were drafted in a manner consistent with the resource management approach of the PDP.
50. Where we have concluded a different zone was appropriate for the land in question, but the options put before us in the evidence did not meet the matters outlined in the previous paragraph, we have recommended the Council reconsider the zoning with a view to initiating a variation to apply an appropriate zone, or apply an appropriate zoning in a later Stage of the District Plan Review.

2.4. Approach Taken to Annotations on Planning Maps

51. During the period leading up to the hearings, we found it necessary to clarify how we would deal with annotations on the Planning Maps which were applied to land not zoned in Stage 1. This arose in response to a memorandum from counsel for the Council¹⁰⁶ and was the subject of two minutes from the Chair¹⁰⁷, and a further memorandum from counsel for the Council¹⁰⁸.
52. This issue has arisen because, when the PDP was notified, the Council chose to show ODP zone notations on land that did not form part of the PDP. In addition, the Council also chose to place annotations such as Landscape Classification lines, UGB lines, Air Noise Boundary and Outer Control Boundary over land that was not included in Stage 1.
53. Relevant to the Stream 13 hearings, for example, Planning Map 31a shows:
- The ODP Quail Rise Special Zone, with a Landscape Classification line running across it;
 - The Frankton Flats Special Zone with the Outer Control Boundary running across it;

¹⁰⁶ Dated 6 June 2017

¹⁰⁷ Dated 12 June 2017 and 21 July 2017

¹⁰⁸ Dated 30 June 2017

- c. The Industrial A Zone with the Outer Control Boundary running across it;
 - d. The Remarkables Park Special Zone with a Landscape Classification line, the Air Noise Boundary and the Outer Control Boundary running across it.
54. We understood the Council’s position to be that where any of those four annotations (Landscape Classification, UGB, Air Noise Boundary, Outer Control Boundary) were shown over land which was shown on the Planning Maps as having an ODP zoning, the relevant line was to be taken as part of the PDP and could have been subject to submission.¹⁰⁹
55. We were concerned that the Public Notice of Stage 1 of the PDP, the notified text in Chapter 1 of the PDP, and the text on the Legend and User Information page of the Planning Maps may have led people to reasonably believe that they did not have the need or ability to lodge submissions on matters affecting their land when it was identified as having an ODP zoning.
56. The consequence of this in relation to the Stream 13 Hearings is that:
- a. We have not heard submissions or evidence from the council or submitters in relation to annotations on the Planning Maps applied to those ODP zones shown on the maps for information purposes;
 - b. We have treated submissions seeking a rezoning of an ODP zone, or submissions supporting an ODP zone, as out of scope as they are not ‘on’ the PDP.

3. NPS ON URBAN DEVELOPMENT CAPACITY 2016

3.1. Giving effect to the NPSUDC 2016

57. The NPSUDC 2016 covers development capacity for both housing and business and its provisions are therefore relevant to the PDP, particularly the purpose and extent of Residential, Commercial and Industrial zones. It requires councils to provide in their plans enough development capacity to ensure that demand can be met. This development capacity must be commercially feasible to develop and supported by infrastructure. Local authorities are also required to prepare a housing and business development capacity assessment and to regularly monitor market indicators, to ensure there is sufficient capacity to meet demand. The Queenstown Lakes District is a high growth urban area. Therefore it is required to meet the requirements of the NPSUDC 2016.¹¹⁰
58. The NPSUDC came into force on 1 December 2016, more than a year after the PDP was notified (26 August 2015) and well into the hearings. To give immediate effect to the NPSUDC 2016 as required, the Council initiated a review of the Dwelling Capacity Model 2015 (the DCM) and business development capacity in March 2017. The first phase of this work was completed in mid-2017. Consequently, the modelling results were introduced progressively through the Council’s Section 42A Reports and evidence, primarily in Hearing Streams 12 Upper Clutha Mapping and 13 Queenstown Mapping (the last hearing in this stage of the plan review). The DCM results were adjusted during the hearing on Stream 13 as recorded in the Council’s evidence and legal submissions in reply.
59. Policy PB1 in the NPSUDC 2016 required the Council to prepare a full housing and business development capacity assessment by 31 December 2017. In March 2017, the Council advised that it was working towards this date and was undertaking a number of workstreams that ‘may

¹⁰⁹ Based on Counsel for the Council’s Memorandum dated 6 June 2017 at paragraph 8

¹¹⁰ Preamble, NPSUDC 2016, pp4-5.

not be concluded in time for rezoning evidence'.¹¹¹ This proved to be the case. Therefore the Council's evidence to the hearing is best described as a 'work in progress'. We were satisfied nonetheless that it was a reliable basis for evaluating rezoning requests because the District is well-supplied with zoned, undeveloped [feasible capacity] Residential and Business land in the short and medium term. We considered there was a low risk associated with relying on the findings of this 'work in progress' because of the requirements for monitoring and reporting within the NPSUDC 2016. Specifically, policy PC3 requires local authorities to initiate a response within twelve months when the evidence base or monitoring obtained in accordance with policies PB1 to PB7 indicates that development capacity is not sufficient in any of the short, medium or long term.¹¹² If circumstances change or the final housing and business development capacity assessment came to a significantly different conclusion, the Council is obliged to respond by providing further development capacity and enabling development.

60. Our duty when hearing submissions was to consider whether, in terms of policy PA1, the PDP provided sufficient housing and business development capacity in the District's urban environment over the short, medium and long term. This same question was considered by the Hearing Panel for Stream 12 Upper Clutha Mapping with respect to the Wanaka Ward.¹¹³ The NPSUDC 2016 provides for a review after 10 years therefore it was particularly important that we evaluated whether there was sufficient residential and business development capacity enabled by the PDP in the short and medium term.

61. The Panel hearing evidence in Stream 12 observed that the NPSUDC 2016 “

“does not prescribe where any particular urban development capacity needs to be located merely that sufficient capacity has to be provided in terms of policy PA1 and that, in terms of policy PA3(a), particular regard has been had to provision for choices meeting the needs of people and communities and future generations.”¹¹⁴

62. That Panel went on to say that the NPSUDC 2016 provides general background to the rezoning applications but does not dictate which rezoning submissions should be accepted.¹¹⁵ We agree with both observations and relied on them when approaching the evaluation of submissions seeking rezoning in Wakatipu.

63. Given the timing of notification, whether the zone provisions in the PDP gave effect to the NPSUDC 2016 was addressed by the Panel prior to completion of the hearings on the text. In a minute dated 4 February 2017, the Panel asked the Council to confirm it was satisfied that the provisions of the PDP 'which have already been heard' gave effect to the NPSUDC 2016. Counsel for the Council responded with a memo dated 3 March 2017 stating that it is the Council's position that a number of the objectives and policies of the NPSUDC 2016 that took immediate effect were given effect to by the provisions of the PDP chapters.¹¹⁶ The Hearing Panel agreed with this position therefore we have retained the number, nature and type of urban zones as notified, albeit the Hearing Panel has recommended changes to the objectives, policies and other provisions.

¹¹¹ Memorandum of Counsel on behalf of QLDC regarding the NPSUDC 2016 dated 3 March 2017, para 22.

¹¹² Short term is defined as 'within 3 three years', medium term is 'within 3 - 10 years' and long term is 10 - 30 years.

¹¹³ Report 16; Relevance of NPSUDC

¹¹⁴ Ibid, paragraph 120

¹¹⁵ Ibid, paragraph 121

¹¹⁶ Memorandum of Counsel on behalf of QLDC regarding the NPSUDC 2016 dated 3 March 2017, para 3.

64. Consequently, we have relied on the text of the relevant Residential and Business chapters as recommended by other Hearings Panels when considering the appropriateness and extent of these zones ‘on the ground.’¹¹⁷
65. Strategically, the Urban Growth Boundary is a method adopted in the PDP as one means of managing urban growth. The notified proposal for identification of UGBs is supported by the Panel for several reasons including its role in giving effect to the NPSUDC 2016. This matter is addressed fully in Recommendation Report 3.¹¹⁸ We relied on this recommendation and the accompanying amended text in Chapter 3 when considering submissions on the location of the UGB.
66. Together, the recommended PDP policies relating to the location of the UGB, the recommended provisions of the zone chapters and strategic capacity enablement provided by the DCM results, assist the Council to give effect to the NPSUDC 2016. In our deliberations, we considered these matters in the context of the subject site or area and in light of the zoning principles (see below) in order to recommend an appropriate zone and/or planning map notation. Because the DCM results provided some confidence that there was sufficient residential and business development capacity enabled by the PDP for the District, the relief sought needed to be supported on some other relevant basis.
- 3.2. The DCM - supply of land for residential, commercial and industrial purposes**
67. Underlying the DCM are growth projections for the QLDC area prepared by Mr Walter Clarke, infrastructure advisor at Rationale Limited.¹¹⁹ The Council adopted Mr Clarke’s recommended ‘modified’ growth scenario as the basis for development capacity modelling.¹²⁰ Mr Clarke’s evidence on population projections was not challenged therefore we accept and rely on it.
68. In summary, the population in the District is projected to increase to approximately 49,300 by 2028 (the life of this plan or the ‘medium term’ as defined in the NPSUDC 2016) and to nearly 66,500 by 2048 (‘long term’ as per NPSUDC 2016). Mr Clarke expected the population to double by 2058 with the rate of growth highest in the next ten to fifteen years.¹²¹ This scenario has implications for the zoning strategy in this PDP and long term urban growth management.
69. Mr Clarke’s ‘modified growth’ model predicted there would be a demand in the District for 24,700 dwellings in 2028 and 31,600 dwellings by 2048.¹²² For the Wakatipu ward, the model predicted a demand for 15,254 dwellings by 2018 and 20,261 dwellings by 2048 compared to a baseline of 12,128 dwellings in 2018.
70. Mr Clarke’s population growth predictions and, consequently, his predicted demand for dwellings were utilised in the DCM. We accept there is always uncertainty in modelling, particularly when looking a long way into the future. We also accept that the approach to assessing and monitoring housing and business development capacity enablement required by the NPSUDC 2016 will result in further calibration of the inputs to the DCM as new data comes to hand. Accordingly, we were satisfied that it was reasonable to rely on the outputs

¹¹⁷ Refer to Recommendation Reports 9A and 11.

¹¹⁸ See Section 6.3.

¹¹⁹ W Clarke, EIC, 19 June 2017. Section 6.1 Table 4 sets out the population projections and section 6.2 summarises key findings. For the full analysis, see Appendix 2, QLDC Growth Projections to 2058.

¹²⁰ W. Clarke, EIC, 9 June 2017, paragraph 5.8 and Figure 3

¹²¹ Ibid, section 6.2(c)

¹²² Ibid, Table 1

from Mr Clarke's modelling as inputs to the DCM. The notified PDP enabled sufficient residential capacity to meet demand beyond 2048 which meant there was a low risk that uncertainty with respect to the population predictions would not result in a significant risk of failing to meet the requirements of the NPSUDC 2016 in the short to medium term.

3.3. Dwelling capacity

71. Dwelling capacity modelling was undertaken by Mr Philip Osborne, an economic consultant with Property Economics Ltd. Mr Osborne's EIC (24 May 2017) and Reply Evidence (6 October 2017) described how the DCM was constructed and then adjusted to satisfy policy PC1 of the NPSUDC 2016. This policy requires local authorities to provide an additional margin of feasible development capacity over and above projected demand of at least 20% in the long term and 15% in the short and medium term. Mr Osborne's initial approach was to discount the estimates of feasible development capacity in recognition of higher than average levels of land speculation and banking (the 'development chance'). This approach did not satisfy the method specified in policy PC1 which requires a general approach of providing an additional margin to projected demand of 20% to 10 years (short to medium term) and 15% in the long term (30 years). The differing rates recognise the ability for the market to 'average out' over the longer term. The consequence of this added margin to projected demand is then, that feasible capacity must also meet that higher demand projection. The table in his Reply Evidence set out the revised results calculated in accordance with policy PC1.¹²³ For Queenstown, there would be a surplus of 18,232 dwellings enabled in the short term and 15 783 dwellings in the medium term.
72. Having adjusted the DCM to satisfy policy PC1, Mr Osborne maintained his evidence that there is sufficient development capacity enabled in the PDP to meet the likely demand for housing in the short to medium term. Indeed, the feasible capacity in the PDP exceeds projected demand for dwellings across each of the timeframes in policy PA1 i.e., in the short, medium and long terms. In other words, there is more than enough land zoned Residential in the PDP to meet the likely demand for housing long term. Given this generous supply of feasible capacity and the Special Housing Areas programme, we consider there is no pressing need to extend the area of Residentially-zoned land in Queenstown.
73. Mr Osborne's evidence was not challenged by anyone similarly qualified. However, Mr Nick Geddes, a resource management practitioner, addressed the DCM in supplementary evidence presented on behalf of three submitters.¹²⁴ He raised concerns about the capacity estimates (data utilised in existing zones, the approach to special zones and the role of special housing areas) and compliance with the policies of the NPSUDC 2016. Ms K Banks, a planner for the Council, responded by explaining the differences between the capacity estimates prepared as a desk-top exercise for the DCM 2015 and the updated 2017 model which is more robust.¹²⁵ Based on this explanation and our own questioning of the witnesses, we were satisfied that the capacity estimates presented in Mr Osborne's reply evidence were reliable. Further, there is more than enough existing Residential zoning in the PDP to meet short and medium term demand and thus to satisfy the requirements of the NPSUDC 2016.
74. Another concern addressed by Mr Geddes was the role of land banking and speculation in Queenstown, which poses a risk to affordability because land that is enabled for development is not coming to market in timely fashion. In his opinion, this was partly due to the cost of

¹²³ P. Osborne, Reply Evidence, 6 October 2017, paragraphs 2.3 – 2.6 re methodology and table within paragraph 2.7

¹²⁴ N. Geddes, EIC, Submissions 338, 328 and 715, 4 July 2017.

¹²⁵ K. Banks, Summary of evidence for Group 1B, 21 July 2017, paras 24 – 38.

development. For example, intensification within the UGB is costly due to the topography and higher standards in the plan rules.¹²⁶ With respect to large areas of undeveloped Residentially-zoned land within the UGB, he said that returns on development needed to be in the order of 33% before land would be subdivided whereas Mr Osborne assumed a 22% return. Landowners would simply withhold their land until the returns are acceptable. Be that as it may, land banking is an acknowledged issue in Queenstown. However the problem of relying on a few large landholdings for the vast majority of the land supply cannot be solved by this PDP alone.

75. In reply to questions from the Panel about the role of land banking and how the PDP might assist the Council to deal with that issue, Mr Osborne recommended increasing the area of medium density residential zoning as a means of lowering the unit cost of a dwelling. This, in turn, would improve the chance of development occurring, i.e. of land being released. In addition, as neighbourhoods within the existing urban area age, the ratio of improvements to land value reduces which also facilitates intensification. Mr Sean McLeod confirmed this advice in answer to questions when he presented evidence in support of increasing the area of MDRZ in Goldfield Heights, on Queenstown Hill and in Fernhill and Sunshine Bay.¹²⁷ We accept this evidence which is grounded in market experience. In our opinion, it is desirable to promote intensification by providing more medium and high density zoning for several reasons including affordability and lifestyle choice. However it is prudent to expect that it will take some time before higher density zoning within the UGB results in meaningful numbers of new dwellings coming to market.

76. In summary, we accept Mr Osborne's evidence on dwelling capacity and conclude that there is more than enough feasible development capacity enabled by the PDP in Queenstown to satisfy the requirements of the NPSUDC 2016.¹²⁸ Further, we conclude that there are no constraints or directions imposed on our recommendations by the DCM results because of the generous surplus of enabled residential capacity compared to demand in the short, medium and long term. We acknowledge the limited ability of the PDP to address the issue of land banking. However, where appropriate, we have taken opportunities to increase the extent of MDR zoning in existing urban areas where this is consistent with the Strategic Direction for the District and zoning principles e.g., Fernhill and Frankton North.

3.4. Business capacity – Commercial (retail, service and office activities)

77. The NPSUDC 2016 applies to the supply of business land as well as residential development capacity. Evidence on commercial (retail, service and office) capacity was given by Mr Tim Heath, property consultant, retail analyst and urban demographer with Property Economics Ltd. His analysis reviewed the current supply of business zoned land, estimated the vacant commercial zoned land 'available' to meet future demand and compared this supply to projected demand (by using the Property Economics Retail Expenditure Model) over the period 2017-2048.¹²⁹ Office land requirements were assessed by Mr Osborne for the purpose of this analysis.

78. As a result of questions from the Panel, minor changes were made to the table showing the Retail and Commercial Zoned Area and consequentially the table showing feasible capacity

¹²⁶ N. Geddes, EIC for Middleton Family Trust Submission 338, paragraphs 6.13 - 6.16.

¹²⁷ S. McLeod, EIC for Submissions 389 & 391, 9 June 2017

¹²⁸ The Panel hearing the Upper Clutha Mapping submissions came to a similar conclusion in regard to the Wanaka Ward. See Report 16, paragraph 139

¹²⁹ T. Heath, EIC, Commercial Land Requirements, 24 May 2017; Reply Evidence, 6 October 2017.

i.e., of Commercial Land Requirements. The updated tables were included in Mr Heath's Reply Evidence.¹³⁰

79. Mr Heath concluded that:

"In the context of the total retail and commercial zoned land area within the District, this update has no consequential effect on my findings in my evidence in chief, which was that the supply of retail and commercial zoned land within the Wakatipu Ward is sufficient for the next 20 years (to 2038), and it is not until the 20-30 year planning horizon (between 2038-2048) that the Wakatipu Ward may experience a shortfall and require additional land capacity for retail and commercial service activities. The land demand estimates included in Table 4 (in both my evidence in chief and above), include the NPS 'margin' as required in PC1 of the NPS. This is confirmed in paragraph 7.4 of my evidence in chief."¹³¹

80. Mr Heath's evidence was not challenged during the hearing, therefore we accept and rely on it. We find there is sufficient estimated feasible capacity to meet projected commercial land requirements in the short and medium term in the Wakatipu and Wanaka wards (i.e., the district to 2038). Mr Heath's analysis identified that additional commercial land may be required in the Wakatipu Ward in the long term (to 2048). This is not a matter that requires an immediate response however it does point to the importance of monitoring commercial trends. As noted earlier, the NPSUDC 2016 places a higher onus on Council to monitor the uptake of housing and business land and to respond within 12 months if monitoring identifies any shortfall.¹³² With this safeguard, changes in demand for commercial land can be addressed in a timely manner. We are satisfied that the current business zonings in the PDP meet the requirements of the NPSUDC 2016 with respect to business land capacity enablement in the short and medium terms.

81. We took this finding into account when considering a number of requests for rezoning from Residential to Business,¹³³ changes from one type of Business zone to another and when evaluating the appropriate zoning for Frankton North. It means there is no justification for increasing the area of Business zoning in this PDP solely to enable greater commercial capacity. Such submissions need to be supported on some other relevant basis.

82. The Council asked Mr Heath to comment on proposals to rezone Frankton North as LSCZ or BMUZ, both options being within scope. Frankton North has an area of 6.85ha and is opposite Frankton Flats, an emerging business centre. Mr Heath said that:¹³⁴

....it is difficult to see how all this land in Frankton North could be commercially viable and sustainable as a LSCZ without having adverse effects on other centres within the network and the integrity of the LSCZ, which is intended to provide for small scale convenience activities.

83. BMUZ was an alternative option which Mr Heath said could potentially result in a range of large format retail and large scale office activities establishing given its high profile location.

¹³⁰ T. Heath, Reply Evidence, 6 October 2017, Table 4

¹³¹ Ibid, paragraph 2.5

¹³² Opening submissions for the Council, 21 July 2017, para 5.14.

¹³³ For example, Submissions 141, 828 and 840 relating to the McBride Street/Terrace Junction area; Submission 425 Kelvin Heights; and Submission 102 Gorge Road

¹³⁴ T. Heath, Reply Evidence, 6 October, para 3.4

In his opinion, this zone had the “potential to undermine investment in the centres network and in the development of vacant land”.¹³⁵

84. Pragmatically, Mr Heath preferred BMUZ but with site specific rules that manage the development potential of retail and office activity. We understood the economic basis for this pragmatic solution. However, we were not prepared to recommend rezoning a significant part of Frankton North at BMUZ because we agreed with Mr Heath. BMU zoning had the potential to undermine the centres network (Strategic Objective 3.2.1.2) and zoning strategy which provides for BMU zoning in close proximity to Queenstown town centres. Frankton North is distant from Queenstown which means that BMU zoning would not support the role of that centre. Furthermore, it would likely undermine the role of Frankton Flats as an industrial and commercial service centre. We saw no need therefore to increase the area of Business zoning at Frankton North for capacity reasons and Mr Heath’s evidence convinced us there was a commercial risk to the centres strategy from rezoning to BMUZ.
85. Nevertheless, we have recommended rezoning from Rural to BMUZ a 90m deep strip of land in Frankton North with frontage to SH6 lying west of Hansen Road, widening to encompass the land as far as Hansen Road (amounting to less 4 ha of developable land).¹³⁶ This recommendation was based factors other than capacity including the unsuitability of the Rural Zone, the land’s location within the UGB and the lack of viable land uses due to constraints imposed by the OCB. In our view, a relatively small area of BMUZ zoning in this location would not lead to significant economic effects on the centres network provided the activities are limited to avoid ASAN, retailing and large format development.¹³⁷ Due to the proposed roading upgrades, we expect it will be some years before this land will come to market.
86. The appropriateness of LSCZ for McBride Street was also considered by Mr Heath.¹³⁸ In his opinion, assuming 1 Hansen Road remains LSCZ and an additional 6.85 ha was rezoned BMUZ at Frankton North, rezoning this land as LSCZ would oversaturate the market. We agree with his conclusion that LSCZ is not appropriate for McBride Street. However, we reached our view in reliance on the results of the feasible development capacity study which shows that no additional Business land is required in the PDP in the short to medium term and also because there would be adverse effects on the residential amenity values. The submitters did not make a case that other relevant factors supported their requested rezoning.¹³⁹
87. We asked Mr Heath whether it would be appropriate to enable office activities on the McBride Street properties while retaining Residential zoning. In his opinion, this would undermine the zoned provision for office activities. We inferred from the discussion that it was his opinion that the Business zones, together with the enablement of home offices in Residential zones, provided sufficient opportunities for small scale offices to establish throughout the urban area.
88. Whether rezoning to Business or up-zoning can be justified for reasons other than capacity enablement is addressed with respect to specific submissions in later sections of this report.

¹³⁹ Report 17-06, Part N

3.5. Business capacity - industrial

89. Evidence on the District's business market was given by Mr Osborne. Mr Osborne described the economic drivers, outlined the current business environment and compared projected demand and supply of business land. His EIC concluded that:¹⁴⁰

*In terms of industrial land, neither Wakatipu nor Wanaka have sufficient land to meet 2048 demand requirements. However, the current zoned land is sufficient to meet the market needs until 2030.*¹⁴¹

90. This conclusion was later refined to acknowledge the effect of applying buffers on demand as required by policy PC1 of the NPSUDC 2016.¹⁴² Mr Osborne's revised opinion was that industrial land capacity is likely to be absorbed by the beginning of 2030 which represented a subtle difference in timing.
91. The only other evidence on industrial capacity was presented in relation to the Coneburn Industrial Estate by Mr Michael Copeland, an economist.¹⁴³ Mr Copeland cited the 2013 McDermott Miller report which analysed supply and demand for commercially zoned land in the Wakatipu-Arrowtown area for the period 2013-2031.¹⁴⁴ This study found that a shortage of industrial land may arise by 2026 under three of the higher population and building consent scenarios.¹⁴⁵
92. Both analyses concluded that land zoned industrial was likely to be in short supply within 9-12 years in Wakatipu and the witnesses were in agreement in this regard. The differences between the witnesses focused on whether it was timely to respond to this likely shortfall by zoning land at Coneburn in the PDP, and the type of land uses in the submitters' proposed Coneburn Industrial Zone. With respect to timing, Mr Buxton, the Council's planning witness, considered that the provision, location and release of industrial land should be strategically planned for given the approximate 2030 timeframe.¹⁴⁶ We agree with Mr Buxton because there is a long lead time in bringing industrial land to market.
93. Mr Osborne's evidence on industrial capacity to 2048 was not materially challenged and accordingly we find that the current industrial land supply is sufficient to meet market needs until approximately 2030 in Wakatipu.¹⁴⁷ Based on his evidence, we are reasonably confident that the demand for industrial land will continue to increase and that the supply of existing zoned land will be taken up in the medium term (by early 2030). However, the rate of uptake is influenced by many factors, not just land supply. For this reason, we think it is prudent to increase the supply of industrial land in Wakatipu in this PDP to ensure there is adequate supply in the short and medium term and to maintain a level of competition in the market.
94. Mr Osborne's concerns about retail and office land uses were resolved by agreement. The submitter proposed that most forms of residential, retail and offices activities be excluded

from the proposed Coneburn Industrial Zone to ensure that it is developed to serve the needs of industrial activities, particularly those that are more expansive, yard-based businesses.¹⁴⁸ We heard evidence that these activities were being driven out of Frankton Flats, for example, due to competition from commercial services. The District therefore needs an area where such activities can be established efficiently. Accordingly, we have recommended rezoning land in the Coneburn Valley for industrial purposes and the inclusion of a new Chapter 44 Coneburn Industrial Zone.¹⁴⁹ Routine monitoring as required by the NPSUDC 2016 will identify whether the rate of uptake exceeds that anticipated enabling a timely planning response.

95. We note that the Council is undertaking a comprehensive analysis of industrial land needs for the purposes of future stages of the Plan review (Industrial zones were not notified in Stage 1). The results of this analysis will be fed into later hearings. Meanwhile, we rely on the information presented at this hearing as being the best available in coming to a view on various requests for rezoning.

3.6. Summary

96. We conclude that there is sufficient feasible development capacity enabled to accommodate the demand for housing and commercial (retail, service and office) activities in the PDP in the short and medium term. However, there is a risk that the supply of industrial land in Wakatipu will not be sufficient to meet demand in the life of this PDP. Therefore we recommend that additional land be zoned Industrial at Coneburn.¹⁵⁰ Overall, we are satisfied that the provisions and zonings we are recommending give effect to the NPSUDC 2016.

4. OTHER GENERAL MATTERS

4.1. Urban Growth Boundary

97. An Urban Growth Boundary is a method of describing the scope of acceptable urban expansion beyond land which is already utilised for this purpose.¹⁵¹ As notified, Chapter 3 of the PDP (Strategic Direction) set a goal of strategic and integrated management of urban growth (3.2.2 Goal) and provided for the fixing of UGBs around identified urban areas as a means of implementation (Policy 3.2.2.1.1). Chapter 4 Urban Development included Objective 4.2.2 establishing UGBs as a tool to manage the growth of major urban centres within distinct and defensible urban edges.
98. The Stream 1B Hearing Panel recommends retaining the overall direction of the PDP with respect to urban growth and its containment within UGBs. Recommendation Report 3 sets out in full the reasons for recommending retention of UGBs as a method in the context of the overall strategic direction of urban growth management.¹⁵²
99. Recommended changes to Chapter 3 Strategic Direction included the addition of a list of issues that need to be addressed to enable the retention of the special qualities of the District (3.1 Purpose).¹⁵³ Issue 2 is:

Growth pressure impacting on the functioning and sustainability of urban areas, and risks detracting from rural landscapes, particularly its outstanding landscapes

¹⁴⁸ Report 17-8, Part E, citing outcome of expert conferencing by planners

¹⁴⁹ Report 17-8, Part E

¹⁵⁰ Report 17-8, Part E

¹⁵¹ Report 3, Section 3.5

¹⁵² Ibid, Section 3.5 Urban Growth Management; Section 5.5 Urban Growth; Section 9.2 UGBs.

¹⁵³ Ibid, para 107.

100. This issue is addressed by the recommended objectives and policies of Chapter 3 Strategic Direction and Chapter 4 Urban Development. Chapter 3 provides for urban growth to be managed in a strategic and integrated manner (Objective 3.2.2.1) and for UGBs to be applied around the urban areas in the Wakatipu Basin (including Jack's Point), Wanaka and Lake Hawea (Policy 3.3.13). Chapter 4 reiterates the role of UGBs 'as a tool to manage the growth of larger urban areas within distinct and defensible urban edges' (Objective 4.2.1). The policies address the location of UGBs (Policy 4.2.1.1), their use to contain urban development within the defined UGBs (Policy 4.2.1.3), ensuring sufficient area for future needs and to achieve specific outcomes (Policy 4.2.1.4) and avoiding adverse effects on landscape values (Policy 4.2.1.5). UGBs will be reviewed and amended from time to time, by way of plan changes (Policy 4.2.1.6). A further policy seeks containment of urban development of existing rural settlements that have no defined UGB within land zoned for that purpose (Policy 4.2.1.7).
101. Accordingly, we considered these objectives and policies when evaluating requests to rezone land from rural to urban in Queenstown. Where we have recommended including land within an urban area, we have also recommended the line of the UGB e.g., Coneburn Industrial and Arthurs Point.
102. When requested, we also considered the ONL/ONF line because of the relationship between the location of the UGB and ONL/ONF lines in the strategic framework of the PDP. The UGB sits on the boundary between urban development and the rural area therefore the ONL and UGB lines coincide in places. Where the ONL has been identified and evaluated prior as the first step in the process, this approach is supported. There were instances however where the ONL lines had not been reviewed prior to notification of the review (e.g., Kelvin Heights) or it was difficult to maintain a defensible urban boundary because of the historical pattern of development e.g., Queenstown Hill. In these situations, our recommendations were tinged with pragmatism.
- 4.2. Landscape classification – ONL, ONF and RCL mapping**
103. Issues relating to the PDP's approach to identification and management of ONLs, ONFs and RCL are addressed in the Panel's reports on Strategic Directions, Upper Clutha Mapping and Chapter 21.¹⁵⁴ Many of these same issues arose with respect to submissions on the Queenstown maps. In our deliberations, we came to similar conclusions as earlier panels with respect to the strategic direction of the PDP and its approach to ONLs, ONFs and RCL. We therefore adopt their reasoning and recommendations in this regard. We do not canvass these matters any further.
104. In considering requests to amend the ONL line, UGB and/or to rezone land in Queenstown, we have based our recommendations on an evaluation of the evidence received and the PDP's strategic direction on landscape matters. We have given weight to recommended Policy 6.3.1¹⁵⁵ when forming a view on the location of landscape classification boundaries. Both the notified and recommended versions of this policy provide that land within ONLs, ONFs and RCLs should be zoned Rural. This alignment between the Rural Zone and landscape classification is a key element of the PDP's planning framework and is reinforced by the strategic approach to growth management by means of UGBs.
105. However, while Chapter 6 provides for land within an ONL to be zoned Rural, in fact the PDP has included land within an ONL in other zones e.g., Jacks Point Zone. There are also other

¹⁵⁴ Reports 3, 16-1 and 4A respectively

¹⁵⁵ Notified Policy 6.3.1.2

methods available for managing effects on an ONL e.g., building line restrictions within an urban zone. We ourselves have recommended building line restrictions at Camp Hill and Arthurs Point to avoid split zoning¹⁵⁶, which we consider is necessary to ensure the desired PDP outcomes are achieved. Consequently, we consider there is a need to review the Strategic objectives and policies (particularly those in Chapter 6) to better align with the reality of the PDP and to enable a wider array of methods to be applied to ONLs and ONFs in future. This need is acknowledged by, and tentatively addressed in, the Stage 2 Variations where changes to Rules 6.4.1.2 and 6.4.1.3 are proposed providing for the landscape assessment matters to apply in other zones (as well as the Rural Zone). The primary purpose of these amendments is related to the proposed introduction of Open Space and Recreation Zones, many of which are located within an ONL. In our opinion, a more broadly based strategic review than this is warranted given the geographical diversity and extent of the District's ONLs, the pace of urban growth and the community's aspirations for development.

106. We also consider there is a need to revisit the identification of ONLs, at least in some areas. Identification of ONLs and ONFs is a discrete task and the planning consequences flow from landscape classification, not in the reverse direction. However, in some cases the zoning pattern in the ODP was carried forward in the PDP without reviewing the ONL e.g., Kelvin Heights. As a result, we were not prepared to recommend rezoning land from Rural to urban at Kelvin Heights because there was little logic to the location of the ONL line.¹⁵⁷ A review of the ONL in this area is required before evaluating the costs and benefits of ONL protection in terms of other desired economic, community and environmental outcomes. In other circumstances, urban zoning has been slowly encroaching into the existing ONL, consent by consent, indicating that review is necessary e.g., Queenstown Hill. Finally, where expert evidence established a robust ONL line, we took this evidence into account when deciding whether to recommend rezoning and/or amendments to the UGB e.g., the western section of the Mee property at Kelvin Heights.¹⁵⁸
107. We consider that the method of landscape evaluation should also be reviewed because, to date, it has not included any consideration of the values placed on landscape by the Queenstown community. Ascertaining those values is relevant to the classification of landscapes and the planning responses to be promulgated.

4.3. Arthurs Point

108. It came to our attention during the hearing that the LDR and RV-AP zones at Arthur's Point were embedded within the ONL. However, on the notified planning maps there is no ONL line around the perimeter of the Arthurs Point settlement, notwithstanding that the LDR and RV-AP zones were carried forward from the ODP. In response to questions from the Panel, Dr Read confirmed that the absence of an ONL line was not a 'mapping error'. An ONL line was not drawn around the LDRZ at Arthurs Point simply because it wasn't needed. The PDP framework does not provide for the assessment of landscape matters within urban zones, therefore the presence or absence of an ONL line is immaterial when processing resource consents.¹⁵⁹
109. Ms K Banks addressed the ONL issue in her Reply evidence.¹⁶⁰ In her opinion, it is appropriate to draw the ONL line around the edge of the LDRZ and RVZ at Arthurs Point because, if the

¹⁵⁶ See our separate discussion on this issue below.

¹⁵⁷ Report 17-7, Part C re Submission 48

¹⁵⁸ Report 17-7, Part D

¹⁵⁹ Reply evidence, Ms K Banks, dated 6 October 2017, para 2.2 records Dr Read's oral evidence.

¹⁶⁰ Reply evidence, Ms K Banks, dated 6 October 2017, paras 2.1 – 2.5

LDRZ remained within the ONL, 'the existing developed and low natural character of the urban areas would allow development that ... would compromise the provisions of Chapter 6'.¹⁶¹ We agree.

110. Whether there is scope to apply an ONL line around Arthurs Point was addressed by Ms K Banks¹⁶² and in the Council's legal submissions.¹⁶³ In her Section 42A Report, Ms Banks directed the Panel to the submission point of Universal Developments Ltd¹⁶⁴ which requested that the planning maps be amended so that the ONL lines are only shown on land that is zoned Rural.¹⁶⁵ Universal Developments Ltd has an interest in land within Frankton North, however the point is generic. In our view, it is not open to us to accept this submission point because it specifically asks for the ONL to include land that is zoned Rural whereas there are several cases where we have included other zonings within the ONL e.g., residential or Rural Residential zoning with a building line restriction applicable to identified areas has been recommended as a method of managing landscape effects at Camp Hill and Arthurs Point.
111. The Panel asked whether Clause 16(2) could be used to fix the planning maps. Counsel for the Council submitted that there would be no regulatory effect from applying an ONL around the LDR and RV-AP zones because the landscape assessment matters in Chapter 21 (Rural Zones) do not apply to consent processing in these zones. In other words, applying an ONL in these circumstances is neutral in terms of plan administration and therefore is of 'minor effect'. We agree although in saying this, we acknowledge the implications of the amendments to the rules in Chapter 6 as proposed in the Stage 2 Variations. We have given little weight to these proposed amendments at this juncture.
112. We consider that an ONL line is required at Arthurs Point to ensure efficient and effective planning. A defined ONL line would provide greater certainty when making decisions on rezoning requests and resource consents.
113. In considering specific submissions in Arthurs Point where the location of the ONL was an issue, we have relied on the evidence received in recommending the exact location of the ONL line.¹⁶⁶ Otherwise, we have recommended aligning the ONL with the notified UGB and/or the UGB as amended in response to submission (see Planning Map 39a as recommended).
114. Therefore we recommend to the Council that:
 - a. an ONL boundary be defined around Arthurs Point to exclude the LDR and RV-AP zones from the wider ONL; and that
 - b. This ONL boundary be aligned with the UGB as shown on Planning Map 39a.

4.4. Natural hazards

115. Submissions requiring consideration of natural hazards fell into two groups; requests to change a rural zone to an urban one and requests for changes within the existing urban zones.
116. In considering the most appropriate zone or which is the 'better' zone for a site or area, the risks of natural hazards were a relevant factor. Whether there was sufficient geotechnical

¹⁶¹ Reply evidence, Ms K Banks, dated 6 October 2017, para 2.4

¹⁶² Reply evidence, Ms K Banks, dated 6 October 2017, para 2.5

¹⁶³ Legal submissions in reply, Ms Scott for the Council, dated 6 October 2017, paras 9.7 – 9.15

¹⁶⁴ #177

¹⁶⁵ Section 42A report/statement of evidence Strategic and common themes, Ms K Banks, dated 25 May 2017, para 29.11

¹⁶⁶ Report 17-4; Part C re Submission 494 and Part E re Submission 495

evidence identifying the hazards on a site, the nature of the risks and means of avoiding or managing those risks were matters considered by the Council and the Panel with respect to mapping submissions.

117. From the outset, we recognised that the PDP's planning framework for natural hazards required a case-by-case risk-based assessment. Rather than taking a 'no risk' approach, the PDP allows for some level of risk where land is being rezoned or developed. Consequently, our aim was to ensure there was sufficient evidence to understand the nature of the natural hazard risks, and whether these could be avoided, remedied or mitigated before recommending any rezoning. The level of information required for consideration of rezoning requests is not as detailed as that required for consenting purposes because the Council has additional powers for dealing with natural hazards at the site-specific level.
118. In the PDP, the strategic chapters of the PDP guide the zoning pattern and Chapter 28 Natural Hazards and Chapter 27 Subdivision & Development contain provisions dealing with natural hazards.
119. Broadly, the PDP seeks to ensure a balanced approach between enabling higher density development within the District's scarce urban land resources and addressing the risks posed by natural hazards to life and property. The Strategic Direction Chapter, as recommended, includes Policy 3.2.2 which requires urban development to occur in a logical manner so as to (among other things) 'minimise the natural hazard risk, taking into account the predicted effects of climate change'. Accordingly, our consideration of requests to rezone land with identified natural hazards took into account the nature and extent of the natural hazard risk.
120. Chapter 28 Natural Hazards provides a policy framework to address natural hazards throughout the District. The District is recognised as being subject to multiple hazards and as such, a key issue is ensuring that when development is proposed on land potentially subject to natural hazards, the risk is managed or mitigated to tolerable levels. In instances where the risk is intolerable, natural hazards will be required to be avoided. Council has responsibility to address the developed parts of the District that are subject to natural hazard risk through a combination of mitigation measures and education, to lessen the impacts of natural hazards.
121. The Council maintains a natural hazards database and development proposals affected by, or potentially affected by, natural hazards as identified in the database will require an accompanying assessment of natural hazard risks commensurate with the level of risk posed by the natural hazards.
122. Natural hazards were addressed in the work programme leading up to the PDP's notification. In 2012, a report was prepared by Opus¹⁶⁷ concerning the framework for natural hazards in the district plan review. This report made several recommendations in terms of further study required to better assess natural hazards¹⁶⁸. However, the Council did not undertake detailed hazard studies of the Queenstown urban area as a preliminary to this review. Consequently, the indicative broad scale GIS information together with the hazards register (which is updated as new information comes to hand) were relied on when determining the zoning pattern¹⁶⁹.

¹⁶⁷ Queenstown Lakes District Council Review of District Plan Natural Hazards, Opus International Consultants Ltd, 2012.

¹⁶⁸ Ibid, section 4.2

¹⁶⁹ <http://maps.qldc.govt.nz/qldcviewer/>

123. This same information is used in plan administration to screen applications for private plan changes and resource consents, particularly subdivision. When this information identifies a real or potential risk of natural hazards, the Council requires a site specific geotechnical report. The adequacy of the geotechnical evidence and its implications for decision making are determined case by case. A higher level of certainty is needed to better understand and manage the risk of natural hazards at the site-specific level compared to zoning.
124. Chapter 27 Subdivision & Development states that ‘all subdivision is able to be assessed against a natural hazard through the provisions of section 106 of the RMA. In addition, in some locations natural hazards have been identified and specific provisions apply.’ Natural hazards are matters of discretion to be assessed when consents are lodged e.g., Rule 27.5.7.
125. When assessing a subdivision, the Council also relies on section 106 RMA which provides that a consent authority may refuse to grant subdivision consent, or may grant a subdivision consent subject to conditions, if it considers that there is a significant risk from natural hazards.
126. In addition, sections 71 – 74 of the Building Act 2004 apply to construction of buildings. Section 71 provides that a building consent authority (the Council in this case) must refuse to grant consent for construction of a building, or major alterations to a building, if the land is likely to be subject to one or more natural hazards, or the building work is likely to accelerate, worsen, or result in a natural hazard on that land or any other property. The Council has a range of powers with which to address natural hazard risks when development occurs.
127. The management of significant risks from natural hazards is a matter of national importance in the Act (section 6(h) inserted by section 6 of the RLAA 2017) to be recognised and provided for when decision making and in preparing a plan or plan review. An assessment under section 6(h) does not apply to our recommendations. However, it will apply to the Council’s decisions on applications for consent and to the preparation and consideration of future plan changes and reviews. Recourse to section 6(h) will fortify the weighting given to minimising natural hazard risks when decision-making on consents.
128. In summary, given the geology of the Wakatipu Basin and its location near the Alpine fault, the historical pattern of development in the Queenstown urban area and reliance on broad scale geotechnical information when zoning land, it is expected that consent to subdivide or develop land will be refused in some cases or conditions imposed when a site-specific analysis identifies a degree of risk from natural hazards. This method of managing risk is consistent with the strategic approach in the PDP and recognises the appropriate level of information for each type of RMA decision making ie zoning vs site specific development.

5. ZONING PRINCIPLES

5.1. Considerations in the Analysis of the Most Appropriate Zoning

129. Ms Kim Banks set out the zoning principles and other factors that were considered in the analysis of rezoning submissions, in addition to the statutory tests for deciding on what are the *most appropriate provisions* or zones in a district plan. Key strategies of the Strategic Directions chapter were also considered. This analysis was based on the capacity of land within the notified Queenstown UGB and the reply version of the PDP Stage 1 chapters.¹⁷⁰

¹⁷⁰ Section 42A Report, Strategic Overview and Common Themes, 25 May 2017, paras 15.3 – 15.5

130. In addition to 13 principles, the other two factors are consideration of the proposal in the context of a site or geographic area and relevant local contextual elements such as street layout, topography, accessibility and ability to absorb development.
131. We have examined the principles and other factors one by one and recommend changes designed to remove repetition, improve clarity and sharpen their focus to create an integrated set of guiding principles. Giving effect to the Strategic Direction of the PDP and the ORPS are over-arching principles and therefore should be first and second in the order. The following table sets out the Council's proposed principles and our comments/assessment.

Table 1-1: Zoning principles and other factors applied to the consideration of the most appropriate zoning

Council's zoning principles and evaluation matters Refer to section 42A report, Ms Kim Banks, Strategic Overview and Common Themes, paras 15.3 – 15.5	Panel's comments/assessment
(a) whether the change is consistent with the objectives and policies of the proposed zone. This applies to both the type of zone in addition to the location of the zone boundary;	This principle is unclear especially in light of (b) which requires a comparison between the notified zone and the requested zone. It appears to be saying that the land should be suitable for the zone being proposed. This principle should go further down the list after the principles dealing with the Strategic Direction and giving effect to the ORPS. We recommend revised wording as follows: whether the objectives and policies of the proposed zone can be implemented on the land.
(a) whether the zone proposed / sought is more appropriate than the notified zone;	This is not a principle rather it is the outcome of considering the zoning request by reference to the statutory requirements, principles and other factors. It is therefore deleted.
(b) whether the change is consistent with and does not compromise PDP Strategic chapters and in particular the Strategic Direction, Urban Development and Landscape Chapters;	We agree with the thrust of this principle however we prefer wording such as 'implement the purpose of' or similar. This should be the first principle because zoning is a method of implementing the Strategic Direction of the PDP.
(c) the overall impact of the rezoning gives effect to the ORPS;	Agreed. The PDP must give effect to the ORPS under s 75(3) RMA and is the second principle because it has a directive impact on zoning strategy.

(d) economic costs and benefits are considered;	Agreed because this is required by s32 RMA. It is important to consider both costs <u>and</u> benefits.
(e) zone changes should take into account the issues debated in recent plan changes;	<p>The issues debated in recent plan changes are not a relevant matter for the Panel when making its recommendations and therefore we have deleted this principle. Where material relating to recent plan changes was presented at the hearing, we dealt with it as an evidential matter.</p> <p>We consider that the purpose and content of proposed changes is however a relevant matter in preparing a proposed plan.</p>
(f) changes to zone boundaries are consistent with the maps in the PDP that indicate additional overlays or constraints (e.g., Airport Obstacle Limitation Surfaces, SNAs, Building Restriction Areas, ONL/ONF);	We don't entirely agree with this principle as it may lead to split zoning which we do not favour. However, in general, alignment between zone boundaries and planning notations is desirable, especially the identification of ONLs. In some cases, it may be preferable to adjust the zone boundaries to recognise where non-alignment leads to a better outcome.
(g) changes should take into account the location and environmental features of the site (e.g., the existing and consented environment, existing buildings, significant features and infrastructure);	Agreed
(h) zone changes recognise the availability or lack of major infrastructure (e.g., water, wastewater, roads);	<p>We agree with the general thrust of this principle however we consider it is important to ensure there is alignment between enabling development capacity and its servicing. We recommend the following wording:</p> <p>Zone changes are not inconsistent with long term planning for the provision of infrastructure and its capacity.</p>
(i) zone changes take into account effects on water, wastewater and roading network capacity, and are not just limited to site specific effects of extending infrastructure;	In light of the changes made to (i) above, this principle needs to focus on the environmental effects of

	onsite servicing. We recommend the following wording: Zone changes take into account the effects on the environment of providing infrastructure onsite.
(j) there is adequate separation between incompatible land uses;	Agreed
(k) rezoning in lieu of resource consent approvals, where a portion of a site has capacity to absorb development does not necessarily mean another zone is more appropriate; and	Agreed. This is trying to say that we shouldn't rezone land when a r/c is the right way to go.
(l) zoning is not determined by existing resource consents and existing use rights, but these will be taken into account.	Agreed. This principle should be limited to existing use rights because (h) deals with the consented environment.
Other factors	
Context of a site or geographic area	Agreed
Relevant local context factors including: (a) the layout of streets and location of public open space and community facilities; (b) land with physical challenges such as steep topography, poor ground conditions, instability or natural hazards; (c) accessibility to centres and the multiple benefits of providing for intensification in locations with easy access to centres; and (d) the vulnerability of the wider area the subject land is part of to absorb development.	Agreed. We recommend clarifying the wording of (d) as follows: The ability of the environment to absorb development. This is a key consideration in achieving the Strategic Direction for Landscapes set out in recommended Chapter 6.

132. The recommended zoning principles and other factors are:
- a. whether the change implements the purpose of the PDP Strategic chapters and in particular the Strategic Direction, Urban Development and Landscape Chapters;
 - b. the overall impact of the rezoning gives effect to the ORPS;
 - c. whether the objectives and policies of the proposed zone can be implemented on the land;
 - d. economic costs and benefits are considered;
 - e. changes to zone boundaries are consistent with the maps in the PDP that indicate additional overlays or constraints (e.g., Airport Obstacle Limitation Surfaces, SNAs, Building Restriction Areas, ONL/ONF);
 - f. changes should take into account the location and environmental features of the site (e.g., the existing and consented environment, existing buildings, significant features and infrastructure);
 - g. zone changes are not inconsistent with long term planning for the provision of infrastructure and its capacity;
 - h. zone changes take into account effects on the environment of providing infrastructure onsite;
 - i. there is adequate separation between incompatible land uses;

- j. rezoning in lieu of resource consent approvals, where a portion of a site has capacity to absorb development does not necessarily mean another zone is more appropriate; and
- k. zoning is not determined by existing use rights, but these will be taken into account.

Other factors:

Context of a site or geographic area.

Relevant local context factors include:

- a. the layout of streets and location of public open space and community facilities;
- b. land with physical challenges such as steep topography, poor ground conditions, instability or natural hazards;
- c. accessibility to centres and the multiple benefits of providing for intensification in locations with easy access to centres; and
- d. the ability of the environment to absorb development.

5.2. Split zoning

133. Split zoning can have undesirable consequences due to the PDP's definition of a 'site' which provides (among other matters) as follows:

b) If any site is crossed by a zone boundary under this Plan, the site is deemed to be divided into two or more sites by that zone boundary.

134. Adopting different zones for different parts of a site will inevitably lead to subdivision on an arbitrary basis due to the inclusion of this 'deeming rule' within the definition. This provision could result in sites being created without consideration of servicing and legal access and, more importantly, their suitability for use in accordance with the purpose of the zone. For example, a split zone could result in a small site being allowed in the Rural Zone that is not suitable for rural uses. In this situation, residential development is the most likely feasible use. However, enabling housing would not promote the outcomes sought by adopting Rural Zoning in the first place.

135. This concern was raised during the Stream 4 hearing on Chapter 27 Subdivision and in the Stream 10 hearing on Chapter 2 Definitions. The Stream 10 Hearing Panel has recommended a variation deleting the '... existing provisions that a site crossed by a zone or district boundary is divided into separate sites as a result'.¹⁷¹ Meanwhile, this 'deeming rule' remains in the definition.

136. In this hearing stream, split zoning was a matter considered in Frankton North, Arthurs Point and Kerry Drive. We have avoided split zoning wherever possible due to the problematic consequences arising from the wording of the definition of 'site'.

5.3. Queenstown Airport Corporation Limited Further Submissions¹⁷²

137. QAC lodged further submissions in opposition to 16 submissions¹⁷³, in each case giving the following reason for the opposition:

QAC is concerned rezoning requests that will result in the intensification of ADSAN establishing within close proximity to Queenstown Airport [sic].

¹⁷¹ Report 14 on Stream 10, para 384

¹⁷² Further Submission 1340

¹⁷³ Submissions 16, 48, 125, 150, 318, 328, 336, 338, 347, 389, 391, 425, 429, 434, 527 and 661

The proposed rezoning is a significant departure from the nature, scale and intensity of ASAN development currently anticipated at this site and may potentially result in adverse effects on QAC over the longer term.

The proposed rezoning request should not be accepted.

138. Ms Wolt presented very complete submissions to us explaining the purpose of these further submissions. As we understood QAC's position, it was that passenger growth at the airport meant that the noise produced by planes taking-off and landing at the airport would reach the limits imposed by Designation 2, as delineated by the ANB and the OCB shown on the Planning Maps, earlier than anticipated.¹⁷⁴ We understood QAC was seeking to limit the development of land outside the OCB so as to limit the population that could be affected by future noise effects of the airport. Mr Kyle expressed this as *"the best form of protection to avoid reverse sensitivity effects."*¹⁷⁵
139. The Council's position was that it was not appropriate or necessary for the PDP to go beyond the limitations imposed by PC35, particularly where QAC was not pursuing an amendment to its OCB.¹⁷⁶
140. We agree with the Council on this point. The ANB and OCB provide, by being imposed as conditions on Designation 2, a limitation on the amount of noise that aircraft operations at Queenstown Airport can create. Through the public process of amending the designation (generally referred to as PC35) the local community accepted a certain level of noise and associated limitations on development within the ANB and OCB, in part as a reflection of the reduction in amenity values resulting from the increased noise.
141. If QAC wish to increase aircraft operations such that it can no longer comply with the noise limitations imposed by the ANB and OCB, then it would need to commence a new public process to amend the conditions on Designation 2. We have no knowledge of what, if any, amendments to the ANB or OCB will be made in the future. There can be no certainty that the community will accept increased noise from the airport, in the same way that there can be no certainty that Ms Tregidga's *"significant increase in passenger numbers in the future"*¹⁷⁷ will eventuate.
142. We do not consider it to be sound resource management practice to limit development potential in the face of such uncertainty, particularly in a location such as Queenstown which has topographical constraints that limit the land available for urban development.

6. SUMMARY OF RECOMMENDATIONS

143. Our recommended changes to the PDP are set out in detail in Reports 17-2 – 17-12 that accompany this report. For convenience, we have attached a summary of those recommendations, together with any recommendations as to consequential matters at the end of each accompanying report.

¹⁷⁴ Legal Submissions for Queenstown Airport Corporation Limited dated 26 July 2017, at paragraph 104ff

¹⁷⁵ J Kyle, EIC, 9 June 2017, paragraph 6.7

¹⁷⁶ Opening Legal Submissions for the Council dated 21 July 2017, at paragraph 12.5

¹⁷⁷ R. Tregidga, EIC, 9 June 2017, paragraph 47

144. Most of the recommended changes manifest themselves as changes to the planning maps for the Wakatipu Ward. Copies of those maps amended by our recommendations are attached in Appendix 1.
145. We recommend all the planning maps considered in our hearing stream, subject to the amendments described above, be adopted.

For the Hearing Panel

A handwritten signature in blue ink, appearing to read "Nugent", is centered on the page. The signature is written in a cursive style with a large initial 'N'.

PART A: REMARKABLE HEIGHTS LIMITED

Submitter **Remarkable Heights Limited (Submission 347)**

Further Submissions

FS1340 – Queenstown Airport Corporation - oppose

1. PRELIMINARY MATTERS

1.1. Subject of Submission

1. This submission related to a 17 hectare block of land at the top of Middleton Road (Lot 102 DP 411971¹).

1.2. Outline of Relief Sought

2. The submission sought that all of Lot 102 be rezoned as LDRZ and that the UGB be aligned with the property boundaries. In other words, the submitter requested that the area within the subject site that is currently zoned Rural be rezoned to LDRZ. The submission did not seek alignment of the ONL line with the UGB and property boundary however such realignment would be a logical result of accepting this submission.

1.3. Description of the Site and Environs

3. The subject site is part of the steep, glaciated southern face of Queenstown Hill. It is currently being developed for 158 residential lots in accordance with a subdivision consent². Some of the consented development is within the Rural Zone. The site is shown in Figure 5-1 below.

¹ While the submission listed this as the legal description, we note that the consents granted cite the legal description as Lots 102 and 104 DP 411971

² RM081212, varied by RM150520, RM160924, RM161211 and RM170002

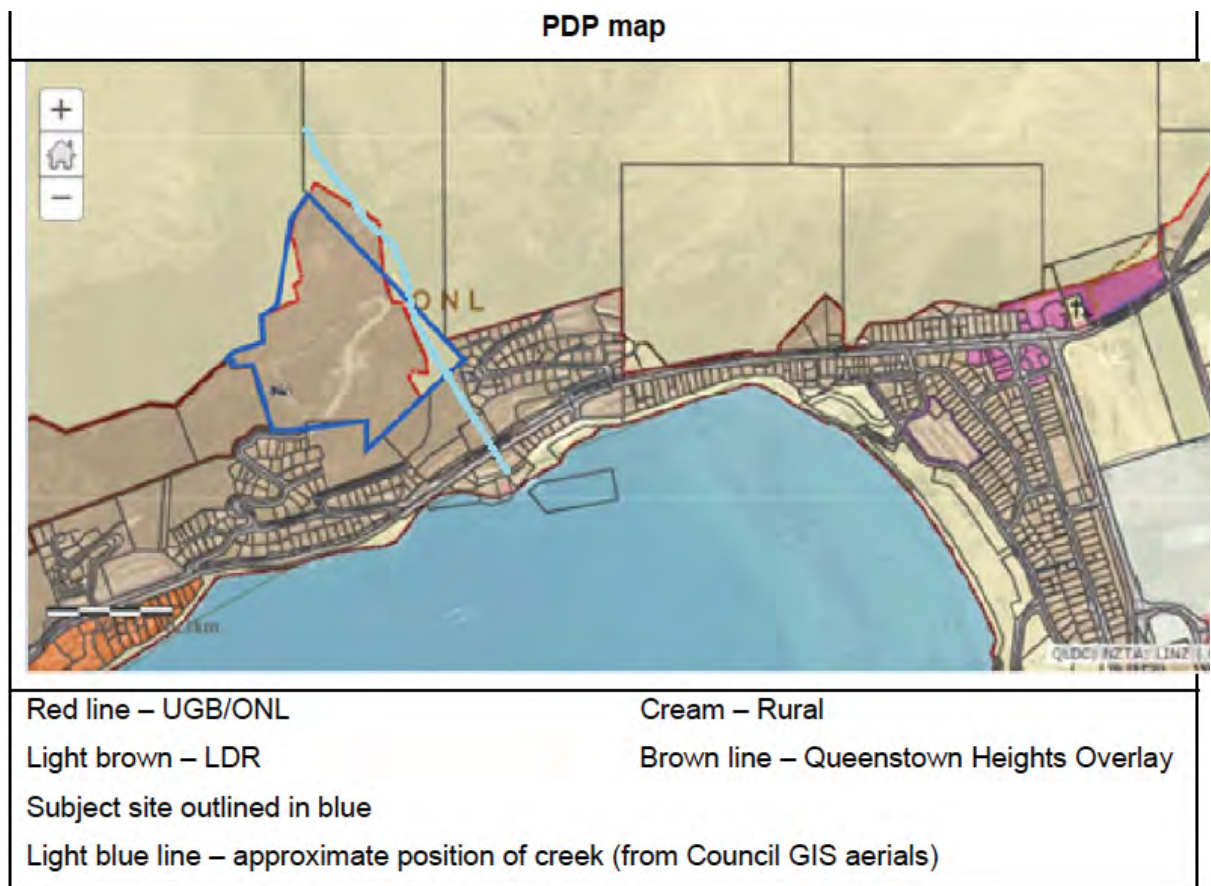

Figure 5-1 – Zoning map of Lot 102 DP411791 which is located at the top of Middleton Road, Queenstown Hill, outlined in blue

1.4. The Case for Rezoning

4. In light of the favourable recommendation in the Section 42A Report, the submitters' representative, Mr Nick Geddes, attended the hearing to answer questions about the zoning but did not give evidence. He provided plans of the approved subdivision showing the roading and lot layout.³

5. For the Council, Dr Read observed that the zone boundaries did not appear to relate to the underlying topography or any other landscape feature. She said that the LDRZ boundary in the eastern area appears to have been located so as to provide some protection to the creek, its margins and the gully in which it is located. Further upslope, however, the zone boundary follows the creek, rather diminishing any positive effect, and downslope the creek and its margins are within LDR zoning. Dr Read noted that subdivision in proximity to the unnamed creek to the east would trigger a requirement for the identification of marginal strips which would protect the character and quality of the stream and its corridor. For these reasons, Dr Read considered that both Rural-zoned areas within Lot 102 could be rezoned to LDRZ from a landscape perspective. Accordingly, the UGB and ONL could be moved to incorporate these two areas.⁴

6. Ms Rosalind Devlin, the Council's planning witness, recommended that the submission be accepted. In her opinion, the requested rezoning would achieve the relevant objectives and

³ Exhibit 13.12 - plan of approved subdivision consent (RM081212)

⁴ Dr M. Read, EIC, 24 May 2017, paragraphs 7.6 – 7.9

policies for the LDRZ (Chapter 7) and would be logical and appropriate. Realigning the UGB/ONL boundaries would better reflect the underlying topography by incorporating land within the same contour to the west (500masl) and by connecting land to the east with Marina Heights at the same elevation (at and below 400masl).⁵ There were no traffic or infrastructure issues arising from the rezoning.

7. QAC lodged a further submission opposing the rezoning of currently vacant land and/or enabling intensification of existing or residentially zoned land because this will bring more people to the aircraft noise effect now and into the future. Mr Kyle's evidence was that the best form of protection available to avoid potential reverse sensitivity effects is to avoid development 'coming to the effect' in the first place.⁶ However the submission site is not located within the OCB and QAC has not initiated a plan change seeking to extend the OCB.

1.5. Discussion of Planning Framework

8. Part of the land is zoned Rural and is within an Outstanding Natural Landscape. Strategic Objectives and policies in Chapters 3 and 6 of the PDP require the identification of ONL's and avoidance of adverse effects on them that would be more than minor and or not temporary. Subdivision and development are discouraged in ONL's unless the landscape can absorb the change and where the buildings and structures and associated roading and boundary changes will be reasonably difficult to see from beyond the boundary of the site.⁷
9. The Zone Purpose for the Rural Zone states that the purpose of the zone is to enable farming activities and provide for appropriate other activities that rely on rural resources while protecting, maintaining and enhancing landscape values, ecosystem services, nature conservation values, the soil and water resource and rural amenity. The Zone Purpose also recognises that a substantial proportion of the Outstanding Natural Landscapes of the district comprises private land managed in traditional pastoral farming systems. Rural land values tend to be driven by the high landscape and amenity values in the district. The long-term sustainability of pastoral farming will depend upon farmers being able to achieve economic returns from utilising the natural and physical resources of their properties. For this reason, it is important to acknowledge the potential for a range of alternative uses of farm rural properties that utilise the qualities that make them so valuable.⁸
10. Objectives and policies of Chapter 21 provide for a range of land uses, including farming, to be enabled while protecting landscape and other natural and amenity values, recognising the need for economic diversification and providing for sustainable commercial recreation activities.⁹ Rules in the plan provide for residential and larger scale commercial recreation as discretionary activities.
11. The LDRZ is the largest residential zone in the District. In Chapter 7, as recommended, it is renamed the Lower Density Suburban Residential zone to more accurately capture the range of traditional and modern suburban densities and housing types enabled. Objective 7.2.1 provides for '*a mix of compatible suburban densities and a high amenity low density residential environment for residents...*'. Policy 7.2.1.2 encourages development that '*maintains suburban residential amenity values including predominantly detached building forms, and predominantly one or two storey building heights.*' Policy 7.2.1.3 seeks to maintain amenity

⁵ R. Devlin, Section 42A Report, 24 May 2017, paragraphs 4.11 – 4.15

⁶ J. Kyle, EIC, 9 June 2017, paragraphs 6.4 – 6.8

⁷ Objective 3.2.4.3, Policies 3.3.29 and 3.3.30, and Policy 6.3.11

⁸ Chapter 21, Clause 21.1

⁹ See Objectives 21.2.1, 22.1.8, 21.1.9, 21.1.10 and their related policies.

values between sites, in particular privacy and access to sunlight. A clear theme is the maintenance of suburban character and high amenity values. Commercial activities are generally discouraged.

12. The submission site is not located within the OCB of Queenstown Airport.

2. ISSUES

13. The most appropriate zone for the subject site

14. Landscape

3. DISCUSSION OF ISSUES AND CONCLUSIONS

15. We agree with Dr Read that there is no logical landscape basis for the current alignment of the ONL line and consequently for the Rural/LDR zone boundary. On Queenstown Hill, we consider that the notified position of the ONL line has been influenced by past decisions and indeed, may not have been well-defined in the first instance. It is arbitrary, perhaps necessarily so given land ownership, the physical geography and historic pattern of settlement.
16. A modest number of additional residential lots would be enabled by rezoning about 2 hectares from Rural to LDRZ which assists with increasing capacity. We find that the additional traffic generated at the Frankton Road intersection with Middleton Road is acceptable and the land can be serviced therefore there are few, if any, adverse effects arising from changing the zoning of these two small areas from Rural to LDRZ. The consented subdivision enables housing that is typical of suburban locations with high amenity values therefore LDR zoning is appropriate.
17. Rural zoning is not appropriate for these two small areas within Lot 102 because they are not suitable for farming. If left as Rural zoning, they would inevitably be developed for housing in accordance with a consent, as evidenced by RM170002, therefore it is inefficient to leave them within the Rural Zone.
18. With respect to QAC's further submission, we consider it is not sound resource management practice to limit development potential in the face of uncertainty about the future of the airport particularly in a location like Queenstown which has topographical constraints that limit the land available for urban development. For a full discussion of this matter, see Report 17-1.¹⁰
19. In the circumstances, we have taken a pragmatic approach to this submission and have concluded that aligning the title, LDRZ, UGB and ONL boundaries is logical and appropriate.¹¹
20. As a consequential amendment, we recommend that the area of land to the north of Lot 102 on the adjacent property is rezoned from LDR to Rural as part of this rationalisation. This rezoning slightly increases the area of land within the adjoining property that is both zoned Rural and within the ONL, a conjunction giving effect to the Plan's strategic direction.

¹⁰ Refer Report 17-1, Section 5.3

¹¹ Refer Report 17-1, Section 4.1

4. RECOMMENDATION

21. For the reasons set out above, we recommend that:
 - a. Submission 347 be accepted; and
 - b. Two areas of land within Lot 102 DP411971 be rezoned from Rural to LDRZ; and
 - c. The UGB align with the legal boundary of Lot 102 DP411971; and
 - d. The land zoned LDRZ in the notified PDP that is not within Lot 102 be rezoned Rural as a consequential amendment; and
 - e. The ONL align with the title, LDRZ and UGB boundaries as shown on Maps 33 and 31a.

PART B: MIDDLETON FAMILY TRUST

Submitter Middleton Family Trust (Submission 336)

Further Submissions

FS1340.76 – Queenstown Airport Corporation - oppose

5. PRELIMINARY MATTERS

5.1. Subject of Submissions

22. This submission related to an area of 38.6 hectares in Middleton Road, Queenstown Hill.

5.2. Outline of Relief Sought

23. The submitter sought removal of the Queenstown Heights Overlay Area¹² from the planning maps, rules in the Subdivision chapter (27.2.1) and LDRZ provisions (7.5.6). The notified LDRZ applicable to land within the QHOA was not challenged.

5.3. Description of the Site and Environs

24. The submitter owns Lot 2 DP 409336 which has an area of 33.71 ha and is located on the south-facing slopes of Queenstown Hill as shown in Figure 5-2 below. This property and the remainder of the land within the Queenstown Heights Overlay Area is covered in a mix of pasture, wilding conifers and scrub. The large, active “Queenstown Hill landslide” is located within the QHOA.

¹² We note that the notified PDP variously referred to this as Queenstown Heights Overlay Area and Queenstown Heights Sub Zone. We will use Queenstown Heights Overlay Area or QHOA.

SUBMISSION #336 (MIDDLETON)

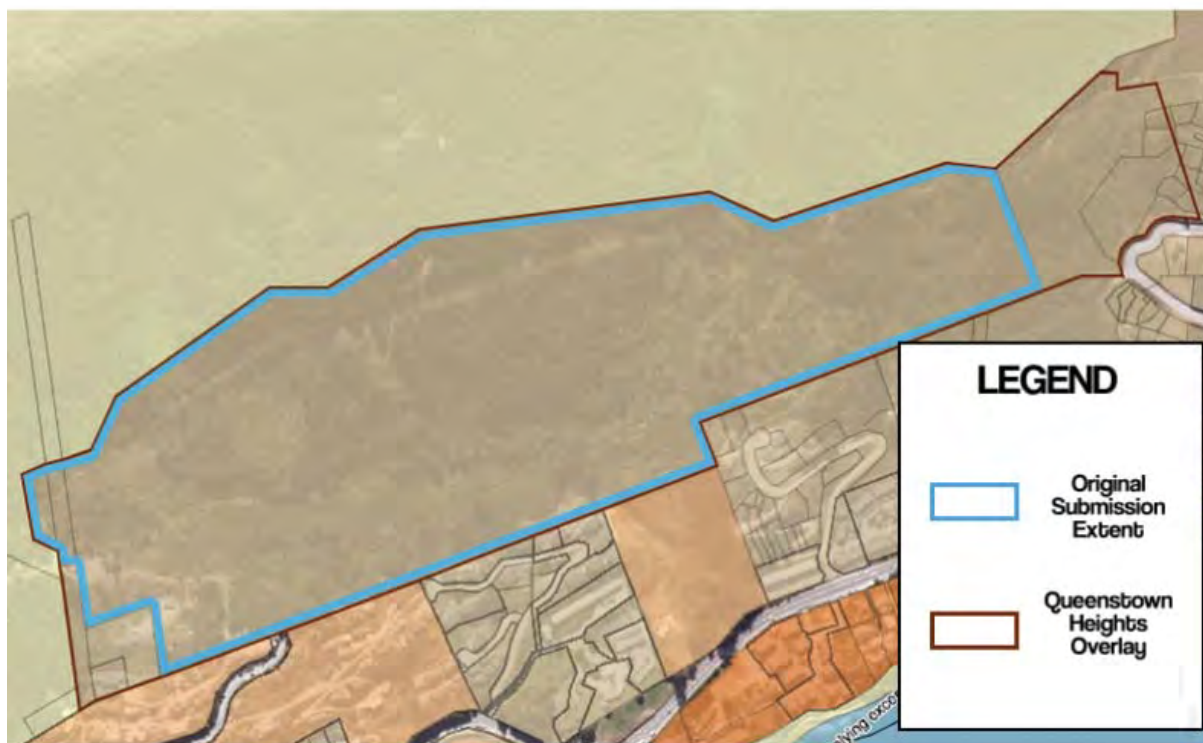

Figure 5-2 - Aerial photograph of the Middleton Family Trust property is outlined in blue and the Queenstown Heights Overlay Area is outlined in brown

5.4. The Case for Rezoning

25. The basis of the submission is that the objectives and policies for the LDRZ, Strategic Directions and Urban Development chapters of the PDP appear opposed to the 1500m² minimum lot size in the QHOA. Further, the submission stated that the contents of the Section 32 report are contrary to the 1500m² lot size in the QHOA. The minimum lot size should be the same as the minimum lot size for the LDRZ (1 unit per 450m²) and the QHOA should be removed.
26. Evidence for the submitter was presented on planning matters by Mr Nick Geddes and engineering geology by Mr Paul Faulkner. Mr Faulkner confirmed that the Queenstown Hill landslide is not present within the adjacent Remarkables Heights subdivision and that the findings of geotechnical reports associated with the relevant consents for that development are not representative of the entire landslide hazard. He said that these reports specifically address the area immediately to the east of the landslide area, not the landslide itself. In his opinion, prior to any development within the landslide area, or immediate margins, a detailed geotechnical investigation will be required to determine whether (or not) there is ground suitable for residential development.¹³
27. This evidence responds to the statement of Ms Devlin that the Queenstown Hill landslide is a large, historic and well documented landslide identifiable on the ground and from aerial photography. In coming to this understanding, Ms Devlin relied in part on geotechnical reports prepared for the Remarkables Heights subdivision included with the submitter's evidence on

¹³ P. Faulkner, EIC, 9 June 2017, paragraph 3.3

Chapter 7 LDRZ. She said that no new evidence on natural hazards had been provided by the submitter since the Stream 6 hearing.¹⁴

28. Mr Geddes commented on the Section 32 evaluation prepared for Chapter 7 LDRZ and concluded that the thrust of this report is justification of an increase in density of housing across residential zones and liberalisation of development controls to promote housing development within the boundaries of existing residential zones. In his opinion, the proposed reduction in density within the QHOA is not signalled in the Section 32 Report and is not supported by any geotechnical or hazard reporting.¹⁵
29. He came to a similar conclusion after analysing the Section 42A Report for Chapter 7 LDRZ¹⁶ and the attached Section 32AA report. In his view, the Council had not justified the proposed change in density.
30. Mr Geddes contested the statement in the Section 42A Report for Stream 6 that no mention had been made in the submission of the land's steep topography nor the site hazards applicable to land within the overlay. His evidence was that the land is not steep by comparison to the lower flanks of Queenstown Hill especially land below Frankton Road. Queenstown Hill is almost entirely occupied by a mixture of high and low density development. He believed the submitter's land to be steep in part but said that was not unique or prohibitive to development.¹⁷
31. With respect to natural hazards, Mr Geddes said that the geotechnical reporting which imposed the landslide boundary on Council hazard maps had not informed any QLDC reporting. Rather, the Council had relied on geotechnical reporting carried out in association with subdivision of the adjacent Remarkables Heights development. Mr Geddes did not believe that these reports were intended to offer advice on the geological conditions across the remainder of the landslide area nor inform a change in density across the QHOA as promoted by the PDP.¹⁸
32. Finally, Mr Geddes addressed the Section 42A Report for Stream 13 Mapping. The recommendation was to reject the submission because the submission lacked evidence on natural hazard and transport and the land is unsuited to conventional LDRZ development.
33. With regard to the impact of additional traffic generated by removing the QHOA, he questioned whether the Goldfields Heights intersection with Frankton Road can accommodate additional vehicle movements associated with the intensification of the LDRZ in this catchment as sought by the PDP.
34. On the subject of natural hazards, Mr Geddes considered it unlikely that development would be accommodated across the entire site due to the natural hazard and that it would more likely be confined to pockets of land which are determined as suitable to build upon through detailed geotechnical investigation at the time of subdivision. In his opinion, a planning response would remove the density and minimum lot size but limit the number of units on the site to the maximum allowed by the ODP i.e., 412 units based on 1 per 450m².¹⁹

¹⁴ R. Devlin, Section 42A Report, 24 May 2017, paragraphs 5.14 & 5.15

¹⁵ N. Geddes, EIC, paragraphs 4.4 & 4.5

¹⁶ A. Leith, Section 42A Report for Stream 6, 14 September 2016, paragraphs 9.42 – 9.45

¹⁷ N. Geddes, EIC, 9 June 2017, paragraphs 5-4 – 5.6

¹⁸ Ibid, paragraphs 5.-7 – 5.11

¹⁹ Ibid, paragraphs 7.4 – 7.5 (4 paras in all)

35. For the Council, Ms Devlin relied in part on the transport evidence of Ms Wendy Banks in coming to her conclusion that the land is unsuited for conventional LDRZ development.
36. Ms Wendy Banks analysed the impact of additional traffic generated on the intersection of Middleton Road and Frankton Road. In her opinion, this intersection would have to be upgraded to accommodate the additional right turning traffic onto Frankton Road.²⁰
37. Ms Devlin relied on Ms Amanda Leith, who prepared the Section 42A Report for Chapter 7 LDRZ, when she stated that the 1500m² minimum lot area was applied because of the steep topography and natural hazards on the site. For any development within the overlay, significant geotechnical investigations would be required to ensure that the land can be made safe and appropriate for residential development. In her view, a resource consent was a better way to address the site-specific natural hazard and geotechnical matters.²¹
38. For QAC, Mr Kyle said:
- “...rezoning proposals which enable the intensification of ASAN near the Airport will ultimately bring more people to the effect of aircraft noise both now and into the future. This has the potential to give rise to an increased risk of reverse sensitivity which could result in the future curtailment of activities at Queenstown Airport.4 Moreover, such proposals would likely lead to residential development in locations where levels of amenity are compromised, and will increasingly become so as aircraft operations at the airport increase over time.”²²*
39. In his opinion, the best form of protection available to avoid potential reverse sensitivity effects is to avoid development coming to the effect in the first place.

5.5. Discussion of Planning Framework

40. LDRZ is the largest residential zone in the District. In Chapter 7, as recommended, it is renamed the Lower Density Suburban Residential zone to more accurately capture the range of traditional and modern suburban densities and housing types enabled. Objective 7.2.1 provides for ‘a mix of compatible suburban densities and a high amenity low density residential environment for residents...’. Policy 7.2.1.2 encourages development that ‘maintains suburban residential amenity values including predominantly detached building forms, and predominantly one or two storey building heights.’ Policy 7.2.1.3 seeks to maintain amenity values between sites, in particular privacy and access to sunlight. A clear theme is the maintenance of suburban character and high amenity values. Commercial activities are generally discouraged.
41. There is an active schist debris landslide identified on the Council’s GIS- based hazards register and a nil to low risk of liquefaction is also noted.
42. The Strategic Direction includes Policy 3.2.2 as recommended which requires urban development to occur in a logical manner to (among other things) ‘minimise the natural hazard risk, taking into account the predicted effects of climate change’.
43. This policy is implemented through the provisions of Chapter 28 Natural Hazards and Chapter 27 Subdivision & Development. In addition, section 106 of the Act and sections 71 – 74 of the

²⁰ W. Banks, EIC, 25 May 2017, paragraphs 8.6 – 8.11

²¹ R. Devlin, Section 42A Report, 24 May 2017, paras 5.12 & 5.1.5

²² J. Kyle, Rebuttal Evidence, 7 July 2017, paragraph 2.2

Building Act 2004 are important means of implementation. Overall, the Council's approach is based on case by case assessment.

44. Chapter 28 Natural Hazards provides a policy framework to address natural hazards throughout the District. The District is recognised as being subject to multiple hazards and as such, a key issue is ensuring that when development is proposed on land potentially subject to natural hazards, the risk is managed or mitigated to tolerable levels. In instances where the risk is intolerable, natural hazards will be required to be avoided. Council has responsibility to address the developed parts of the District that are subject to natural hazard risk through a combination of mitigation measures and education, to lessen the impacts of natural hazards.
45. The Council maintains a natural hazards database and development proposals affected by, or potentially affected by, natural hazards as identified in the database will require an accompanying assessment of natural hazard risks commensurate with the level of risk posed by the natural hazards (Rule 28.3.2.3).
46. Chapter 27 Subdivision & Development states that 'all subdivision is able to be assessed against a natural hazard through the provisions of section 106 of the RMA. In addition, in some locations natural hazards have been identified and specific provisions apply' (Rule 27.4.3.1).
47. The submission site is not located within the OCB.

6. ISSUES

- a. Whether the Queenstown Heights Overlay Area and related rules on density and minimum site size should be removed
- b. Transport
- c. Natural hazards

7. DISCUSSION OF ISSUES AND CONCLUSIONS

48. The ODP zoned this land as LDRZ and applied a Queenstown Heights Low Density Sub-zone (the QHOA) restricting the minimum lot size for subdivision to 1500m². Notwithstanding, the minimum density permitted by the LDRZ was 1 unit per 450m². The 1500m² minimum lot size for subdivision is the same in both the ODP and notified PDP but the PDP proposes to reduce the density in the LDRZ where land is subject to the QHOA to 1 unit per 1500m².
49. Accordingly, the starting point for our consideration is that the land has been in the LDRZ for many years and, until the PDP, was theoretically capable of being developed to a maximum density of 1 unit per 450m² as a permitted activity. Depending on the assumptions made about the area of land allocated to roading, services and recreation reserves, the estimated yield is in the order of 400 lots based on 1 lot per 450m². We are satisfied that about 400 lots would be indicative of what may be enabled if half of the land area within the QHOA was found to be suitable for housing and developed to its full potential.
50. The Council's transport evidence was based on the number of movements generated by an additional 408 lots. We observe that this level of effects was enabled by the density provisions of the LDRZ under the ODP and therefore must have been factored into the original decision on zoning and application of the sub-zone. If the area within the QHOA had been developed

under the ODP, the Council would have been required to deal with the traffic generated by about 400 lots in the normal course of business.

51. Ms Wendy Banks assumed that vehicle traffic generated by the development within the QHOA would use the intersection of Middleton Road and Frankton Road whereas Mr Geddes focused on the intersection of Goldfields Heights and Frankton Road. We consider that until the development is subject to detailed design, access and the distribution of traffic is unknown. We simply note that the land within the QHOA can be accessed from both Middleton and Goldfield Heights Road (at minimum) therefore the traffic generated may not be concentrated at one intersection. We agree with Mr Geddes that this matter can be dealt with at the time of subdivision or development. In our view, the ODP LDR zoning, including the density control, was adopted in anticipation of this level of traffic effects and therefore transport issues are not a valid basis for rejecting this submission.
52. With respect to natural hazards, it was common ground that the Queenstown Hill landslide is located within the QHOA. We agree with the uncontested evidence of Mr Faulkner that a detailed investigation will be required to determine whether (or not) there is ground suitable for residential development. Further, we agree with both Mr Faulkner and Mr Geddes that it is unwise to rely on reports prepared for the adjacent development at Remarkables Heights when forming an opinion on the suitability of the subject land for development. A specific and detailed geotechnical investigation of this site is required prior to development.
53. In practice, the geotechnical investigation required to establish the suitability of the land for development will be the same, regardless of what is proposed. We consider that the results of this investigation will dictate the intensity and type of development that is feasible notwithstanding the Plan provisions. Whatever is proposed, it is not axiomatic that the minimum density or minimum lot size could be realised across the whole QHOA. In fact, this would likely be a bad result which is why we agree with Mr Geddes that a flexible approach to density and subdivision controls is the better approach in the circumstances.
54. We do not support the 'Queenstown Hill Overlay Area' and its associated minimum density and minimum lot sizes because these provisions are unnecessary given the policy framework for managing natural hazards adopted in this Plan. Chapter 27 Subdivision & Development and Chapter 28 Natural Hazards require a case by case assessment of natural hazards risks.
55. In addition, where subdivision is proposed, section 106 of the Act provides sufficient safeguards for the management of natural hazards and where permitted activity status applies, sections 71 – 74 of the Building Act 2004 give the Council power to refuse consent where natural hazards affect land or the construction of a building. A recent amendment to section 6 of the Act includes "*the management of significant risks from natural hazards*" as a matter of national importance. Section 6 requires decision-makers to recognise and provide for matters of national importance when considering applications for land use and subdivision. Thus, the RMA and Building Act work together to ensure that land subject to natural hazards is only developed after due consideration of the hazard, the risk posed and methods of avoiding or mitigating that risk are in place.
56. A further consideration is the effectiveness of the proposed minimum density rule and minimum lot size of 1500m² per unit in managing natural hazards risk. The Council did not provide any evidence in support of these rules and, as pointed out by Mr Geddes, the Section 32 Report did not signal the proposed change in density nor did it provide any evidence on natural hazards underpinning this change. We were left with the impression that the addition

of a minimum density standard of 1 unit per 1500m² for the area included in the QHOA within the LDRZ was done in haste and arbitrarily. We observe that the notified zoning has no higher status than any zoning sought by a submitter and if the Council wants to impose more restrictive provisions, the onus is on it to prove the need for them.

57. With respect to natural hazards risks, we received no evidence establishing that this land should be treated any differently from the rest of the land within existing residential zones in the District in this regard. The Council did not provide a natural hazards assessment justifying the QHOA nor did it substantiate the proposed minimum density and minimum lot size of 1 unit per 1500m². Mr Geddes' opinion that a cap based on the density permitted under the ODP would provide more flexibility has some appeal however this method (or the quantum of the cap itself) was not substantiated in evidence either.
58. As we said above, the capacity of this land for residential development or some other use such as a retirement village hotel will be determined by the results of the geotechnical investigations undertaken prior to development. We are satisfied that the recommended LDRZ and subdivision provisions are sufficiently flexible to enable a reasonable development of this land. Further, we consider that the statutory framework governing natural hazards and the policy approach of Chapter 28 are adequate for managing natural hazards risks on this land and elsewhere in the urban area.
59. Finally, with respect to QAC's further submission, we note that the site is not within the OCB and QAC has not initiated a plan change to extend the OCB. We consider it is not sound resource management practice to limit development potential in the face of uncertainty about the future of the airport particularly in a location like Queenstown which has topographical constraints that limit the land available for urban development. For a full discussion of QAC's further submissions on sites not located within the ANB or OCB, see Report 17-1.²³

8. RECOMMENDATION

60. For the reasons set out above, we recommend that:
 - a. Submission 336 be accepted;
 - b. FS1340.76 be rejected; and
 - c. The Queenstown Hill Overlay Area be removed from Planning Map 31 and 31a; and
 - d. References to the QHOA in Chapters 7 and 27 be removed.

PART C: MT CRYSTAL LIMITED

Submitter **Mt Crystal Limited (Submission 150)**

Further Submission

FS1340.64 – Queenstown Airport Corporation – oppose

9. PRELIMINARY MATTERS

9.1. Subject of Submissions

61. This submission related to a 2.7360 hectare property located at 634 Frankton Road within the LDRZ (Lot 1 DP9121) (see Figure 5-3 below).

9.2. Outline of Relief Sought

62. The submission requested rezoning of the site to either a mix of MDRZ (1.24 ha) and HDRZ (1.49 ha) or, in the alternative, MDRZ with a 12m height limit and provision for visitor accommodation as provided for in the HDRZ.

9.3. Description of the Site and Environs

63. The site is moderately steep to steeply-sloping and contains two streams which join in the south-eastern corner. The gully of the main stream is deeply incised. Riparian vegetation comprises trees and scrub. The eastern half of the site is covered in broom whereas the western side of the main gully is in pasture. There is a house located in the south-western corner with vehicle access from Frankton Road.

64. To the north, the property shares a boundary with the vacant Middleton land (Submission 336) which is located within the notified Queenstown Hill Overlay Area. The Holiday Inn is on the adjacent site to the west. Generally, there is a mix of housing and visitor accommodation on the slopes overlooking the marina and lake to the east and west of this property. Land on the southern side (or lakeside) of Frankton Road is also residential in character and zoned MDRZ.

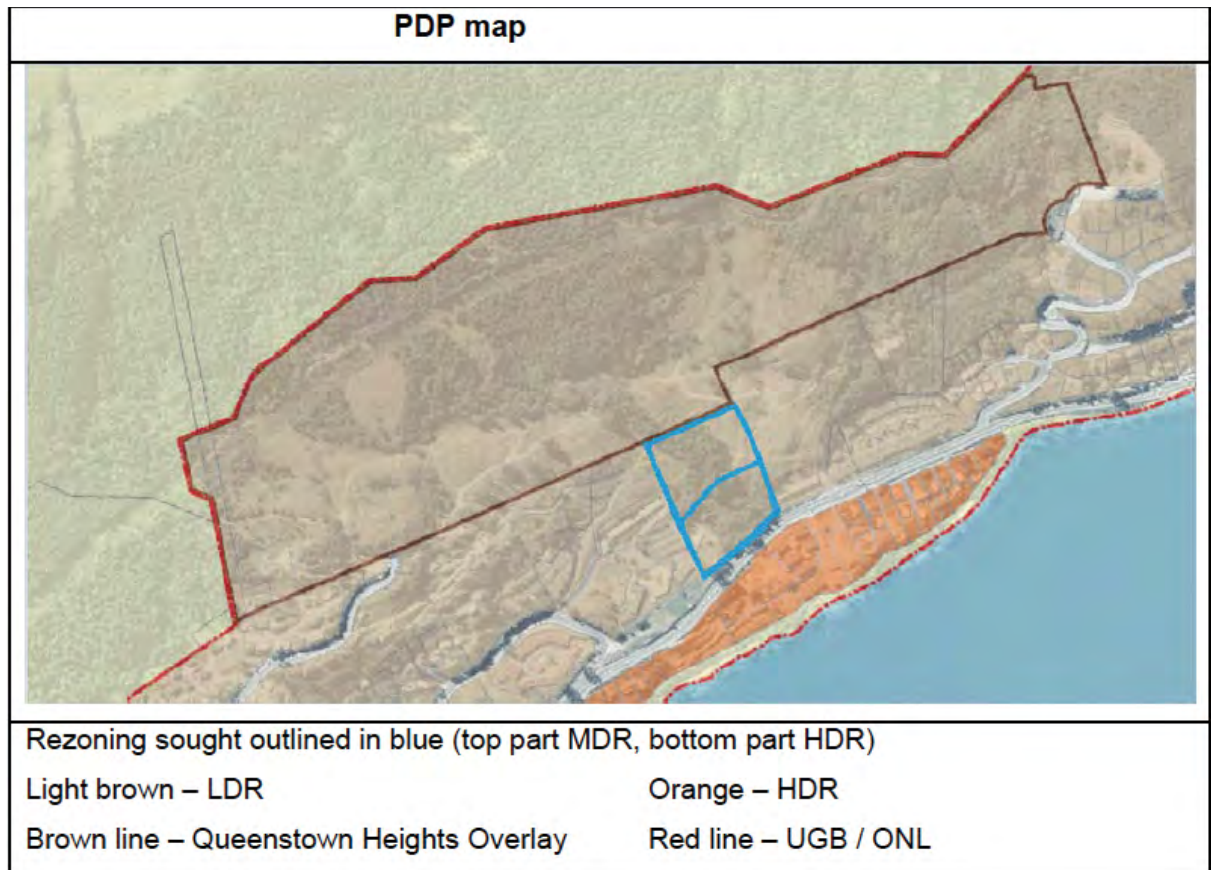

Figure 5-3 –The land subject to the submission outlined in blue.

9.4. The Case for Rezoning

65. The submitter’s planning expert, Mr Sean Dent, presented evidence at the hearing confirming his support for the Council’s revised recommendation that the whole site be zoned MDRZ.²⁴ While he originally provided evidence that supported rezoning the whole property to HDRZ, Mr Dent’s Executive Summary stated his reasons for concluding that the MDRZ would be an efficient and effective planning solution.²⁵ Mr Dent was the only expert to attend the hearing for the submitter however the submitter had provided a geotechnical report²⁶ and a statement of evidence prepared by a civil engineer on infrastructure services.²⁷
66. We record that Mr Dent’s original evidence in support of HDR zoning for the whole site went beyond the scope of the submission.²⁸ The submission sought HDRZ for the lower area only. MDR zoning for the whole site however is within scope therefore there was no need for the Panel to formally deal with matters of scope.
67. Mr Dent relied in part on the opinions of various technical experts in coming to his conclusion that the MDRZ was appropriate for this land. With respect to transport, he relied on Ms Wendy Banks for the Council, who did not oppose the MDRZ because she considered the intensification at this level of density to be insignificant.²⁹

²⁴ R. Devlin, Supplementary Rebuttal Evidence, 11 July 2017, paragraphs 4.1 – 4.11

²⁵ S. Dent, Executive Summary, 22 August 2017, paragraph 1.10

²⁶ S. Dent, EIC, 9 June 2017, Appendix B - Report by Geosolve, August 2016

²⁷ J. McCartney, EIC, 8 June 2017

²⁸ S. Dent, EIC, 9 June 2017

²⁹ W. Banks, EIC, 25 May 2017, paragraph 8.15

68. The geotechnical experts for the Council (Mr Watts)³⁰ and the submitter (Ms Georgia Scott) agreed that the site was suitable for development at an MDRZ density subject to more detailed geotechnical assessment.³¹
69. Mr John McCartney, a civil engineer, provided written evidence on infrastructure and, in particular, the feasibility of servicing the site with wastewater and water supply services. He met Council staff, including Mr Glasner, to discuss the various issues including provision of adequate water for firefighting should HDRZ be adopted. Mr Glasner opposed HDRZ due to concerns about providing sufficient water for firefighting but did not oppose MDR zoning over the site as there would be no change in firefighting requirements compared with the notified LDRZ.³² Mr Dent relied on their expert opinion that there were no insurmountable issues with respect to infrastructure servicing of the subject site if developed at a MDRZ density.³³
70. There was considerable agreement between Mr Dent and Ms Devlin for the Council on planning matters. They agreed that the adjoining properties have been developed to greater densities than conventional LDR through comprehensive developments or as visitor accommodation complexes, such that the surrounding area is not traditionally suburban in appearance and character.³⁴
71. Mr Dent considered it was not an effective or efficient planning approach to try and maintain a LDRZ characteristic that presently does not exist and which cannot be regained in this area.³⁵ Ms Devlin considered upzoning would facilitate more efficient use of the land for residential purposes (taking into account the stream and geotechnical constraints that will restrict the developable area) and development at MDR scale would not result in significant amenity concerns in regard to adjoining properties.
72. Mr Dent assessed the likely yield under MDR zoning as 34 lots, after first deducting the area of land that is unsuitable for development due to natural hazards.
73. Ms Devlin considered that the provisions of Chapter 28 Natural Hazards would ensure that any development on the parts of the site subject to natural hazards only occurs where the risks to the community and the built environment are avoided or appropriately managed or mitigated (notified Objective 28.3.2).
74. Finally, it was Mr Dent's opinion that applying the MDRZ to the subject site as opposed to HDRZ still accords with the Strategic Direction of the PDP to facilitate higher density living near public transport routes, efficient and sustainable use of infrastructure servicing and providing for mixed densities of housing in existing and new urban communities. The MDRZ will also maintain a high quality built environment by requiring assessment of the urban design of multi-unit developments.³⁶
75. QAC lodged a further submission opposing the rezoning of currently vacant land and/or enabling intensification of existing or residentially zoned land because this will bring more people to the aircraft noise effect now and into the future. Mr Kyle's evidence was that the

³⁶ S. Dent, Executive Summary, 22 August 2017, paragraph 1.10

best form of protection available to avoid potential reverse sensitivity effects is to avoid development coming to the effect in the first place.³⁷ However the submission site is not located within the OCB and QAC has not initiated a plan change seeking to extend the OCB.

9.5. Discussion of Planning Framework

76. The LDRZ is the largest residential zone in the District. In Chapter 7 as recommended it is renamed the Lower Density Suburban Residential zone to more accurately capture the range of traditional and modern suburban densities and housing types enabled. Objective 7.2.1 provides for *'a mix of compatible suburban densities and a high amenity low density residential environment for residents...'*. Policy 7.2.1.2 encourages development that *'maintains suburban residential amenity values including predominantly detached building forms, and predominantly one or two storey building heights.'* Policy 7.2.1.3 seeks to maintain amenity values between sites, in particular privacy and access to sunlight. A clear theme is the maintenance of suburban character and high amenity values. Commercial activities are generally discouraged.
77. The purpose of the MDRZ is to enable a greater supply of diverse housing options for the District at a higher density than the LDRZ. Development controls are designed to ensure that the reasonable maintenance of amenity values is maintained. MDR zones should be easily accessible to local shopping centres, town centres or schools by public transport, cycling or walking.
78. The HDRZ provides for efficient use of land within close proximity to town centres that is easily accessible by public transport, cycle and walkways. In Queenstown, it enables taller buildings than in other residential zones, subject to high design quality. Development controls provide minimum of protections for existing amenity value and are otherwise prioritised towards enabling the community's wellbeing by promoting growth and development. There is a focus on intensification and small scale commercial activities are enabled to support larger residential developments, or to provide low impact local services.
79. Chapter 28 Natural Hazards and Chapter 27 Subdivision provide for a case by case assessment of natural hazards risks when subdivision and/or development is proposed.
80. The submission site is not located within the OCB for Queenstown Airport.

10. ISSUES

- a. The most appropriate zone for this land

11. DISCUSSION OF ISSUES AND CONCLUSIONS

81. We agree with Ms Wendy Banks and Ms Devlin that HDR zoning is not appropriate for this land because it is contrary to Objective 9.2.1 which requires that high density housing development occurs in urban areas close to town centres, to provide greater housing density and respond to expected population growth. This property is about 3.5km from Queenstown therefore it is not located 'in close proximity' to the town centre. In our view, the role of Queenstown town centre as an economic, civic and cultural hub for the Wakatipu area would be undermined if high density housing was permitted in other locations further afield, including this site. This outcome would be contrary to Strategic Objective 3.2.1.2.

³⁷ J. Kyle, Rebuttal Evidence, 7 July 2017, paragraphs 2.2 - 2.3

82. Ms Devlin considered that the development enabled by an HDR zone would appear out of character or disparate in this location.³⁸ We agree.
83. We also agree with Mr Dent that the development enabled by the LDRZ would be out of character with the neighbouring development which is more intensive by comparison. It follows that we agree with both planners that MDR zoning is the most appropriate for this site for the reasons given in their evidence and summarised above.
84. We note that the submitter, in accepting MDR zoning for the whole site, did not pursue its request for MDR zoning with a maximum height limit of 12 metres and with the provision for visitor accommodation which applies in the HDR. Ms Devlin addressed this request and concluded that it would be inappropriate to apply a 12m building height to this site along with MDR zoning. In her opinion, the proposed 12m height would enable buildings that would appear as very dominant in this setting relative to the surrounding LDR neighbourhood. The likely pattern of development would be out of character and result in adverse effects in regard to neighbouring residential amenities. Ms Devlin did not support a bespoke height limit rule just for this area.³⁹ We agree.
85. With respect to QAC's further submission, we consider it is not sound resource management practice to limit development potential in the face of uncertainty about the future of the airport particularly in a location like Queenstown which has topographical constraints that limit the land available for urban development. For a full discussion of QAC's further submissions on sites not located within the ANB or OCB, see Report 17-1.⁴⁰
86. We are satisfied that the evidence demonstrated the suitability of this land for MDR zoning. It is easily accessible to local shopping zones, town centres or schools by public transport, cycling or walking. The land is supported by adequate existing or planned infrastructure and its development will enable a greater diversity of housing types, generally around two storeys in height. Subject to detailed assessment of natural hazards and implementation of risk management measures, the site is capable of being safely developed for housing and other activities enabled within the MDR.

12. RECOMMENDATION

87. For the reasons set out above, we recommend that:
- a. Submission 150 be accepted in part; and
 - b. FS1340.64 be rejected; and
 - c. MDR zoning be applied to the whole of the property located at 634 Frankton Road (Lot 1 DP9121) as shown on Planning Map 32.

³⁸ R. Devlin, Rebuttal Evidence, 7 July 2017, paragraph 4.5

⁴⁰ Refer Report 17-1, Section 5.3

PART D: BODY CORPORATE 22362 AND SEAN & JANE MCLEOD

Submission Body Corporate 22362 (Submission 389) and Sean & Jane McLeod (Submission 391) Further Submissions

FS1331 – Mt Crystal Limited – supported both submitters

FS 1340 – Queenstown Airport Corporation – opposed both submitters

13. PRELIMINARY MATTERS

13.1. Subject of Submissions

88. These submissions related to Goldfields Heights and more generally, the area from Frankton Marina to Queenstown Hill, and Fernhill and Sunshine Bays.

13.2. Outline of Relief Sought

89. Submission 389 sought the rezoning of the Body Corporate land (multiple sites as shown on DP22362) and the surrounding area known as 'Goldfields' to MDRZ. Figure 5-4 below shows the Body Corporate land and the notified zoning.

90. Submission 391 sought the rezoning requested by Submission 389. The submission also requested that the medium density zone be extended to include most of Fernhill and Sunshine Bay on the lower slopes within 4-500m of Fernhill Road and that it be also extended all the way along Frankton Road from the existing high density areas to include Panorama Tce, Larchwood Heights, St Andrews Park, Goldfields, Battery Hill, Marina Heights and everything in between.

13.3. Description of the Site and Environs

91. Body Corporate 22362 is a subdivision carried out in the early 1990's by David Broomfield and first approved under the Town and Country Planning Act 1977, with a later variation approved under the RMA. The site was subdivided using the Unit Titles Act 1972. The development consists of 131 units either single dwelling or duplexes. There are large areas of common property either being accesses, open reserve or tennis court. Overall the density of the area is about 630m² per unit including the common property, but some of the sites are 250m² with over 100 being under 500m² and approximately 50 being in the 300-350m² range. The average area per unit is 436m².⁴¹

92. Goldfields is an area with many unit developments including The Ridge Resort adjacent to BC22362 at 67 Goldfields Heights. The area is well-located relative to the town centre and Frankton and many homes have views of the lake and mountains.

93. The wider area identified in the submission extends from the higher density development on Queenstown Hill on or near Kent Street all the way to Marina Drive at Frankton. There is a mix of dwellings, unit developments and visitor accommodation in this area and many properties enjoy lake and mountain views.

94. Fernhill and Sunshine Bay to the south-east of Queenstown town centre are also included in the request for MDR zoning. These hillside suburbs are areas with a mix of housing types and fine views that have developed since the 1960's.

⁴¹ Submission 389

Figure 5-4 – The Body Corporate 22362 site (blue outline)

13.4. The Case for Rezoning

95. Mr Sean McLeod presented submissions on behalf of BC22362 in his private capacity as Chair of the Body Corporate⁴² and for Sean & Jane McLeod.⁴³ As a surveyor, he brought particular expertise and experience to his analysis of plan provisions, infrastructure and transport issues which we appreciated for its common sense.

13.5. BC 22362

96. Turning first to the matter of BC 22362, Mr McLeod explained that the request for MDR zoning was not so much to increase the density of development, more that the size of a number of the units was outside of the proposed LDRZ rules and the development as a whole was already of a medium density nature.⁴⁴

97. In his opinion, the Goldfields area also met the objectives and policies of the medium density rules better than other areas put forward by the Council particularly areas at Frankton and the Ladies Mile SHA.⁴⁵

98. Transport and infrastructure issues were matters of contention. The Council's planner, Ms Devlin, did not support MDRZ for the BC22362 site in reliance on the evidence of Mr Glasner, civil engineer, and Ms Wendy Banks, transportation engineer. Initially, both witnesses opposed the change in zoning because of capacity constraints.

⁴² Submission 389

⁴³ Submission 391

⁴⁴ S. McLeod, Summary Statement, 16 August 2017, paragraph 3

⁴⁵ Ibid, para 5

99. The Council estimated that MDR zoning would enable an additional 120 – 130 lots on the site occupied by BC22362 but Mr McLeod disagreed. He thought it more likely that the difficulty of obtaining consent under the body corporate rules would prevent any new lots being created at all.
100. Although unlikely because BC22362 would not relax its rules, Mr McLeod pointed out that under the current district plan (LDRZ), the permitted and discretionary activities enabled a level of development that exceeded the Council’s estimated 120 – 130 additional lots which gave rise to its infrastructure and transportation concerns. In his opinion, the Council may have to consider including in the LTP upgrading of infrastructure and the Goldfields Heights/Frankton Road intersection regardless of the final zoning of the area.⁴⁶
101. We note his remarks about the popularity of an alternative route into town via St Andrews Park, Highview Terrace and Hensman Road which is reducing the number of vehicles turning right at the Goldfields Heights/Frankton Road intersection. We also acknowledge his observation that at times Frankton Road is at standstill and a roundabout or traffic lights could not disrupt it further.⁴⁷
102. After the hearing, Mr McLeod provided further information on capacity. If the land was bare, a realistic estimate of what could have been achieved by a comprehensive development consent under the operative LDRZ is 350 dwellings, whereas the actual number of dwellings is 131. Given the existing development and utilising only that land which is serviced, accessible, not already in use for access and not too steep, an additional 30 dwellings would be possible under MDR. This result would rely on multiple owners agreeing to have additional dwellings near them and no demolition of existing dwellings.⁴⁸
103. In her Reply Statement, Ms Devlin agreed with Mr McLeod and concluded that a more realistic estimate of yield would be much lower than her initial estimate, from zero to 30 units. She also agreed with Mr McLeod that the site was already mostly developed in a similar manner to MDR, with smaller lot sizes than can be expected under LDR, and attached units and townhouses. As such, she considered that rezoning the site to MDRZ would both reflect the underlying pattern of development and would avoid future technical non-compliances whereby an extension or garage, for example, might breach LDR rules.⁴⁹ Nevertheless Ms Devlin continued to recommend that the rezoning request be rejected due to Mr Glasner’s ongoing concerns about insufficient information on infrastructure matters.⁵⁰
104. Ms Wendy Banks assessed the potential 30 lot yield and concluded that the additional traffic movements at the Goldfield Heights/Frankton Road intersection would not be detrimental to the road network.⁵¹
105. Mr Glasner continued to oppose the rezoning of BC22362 and the wider area in his Reply Evidence due to the lack of evidence about density which meant that he could not rerun his infrastructure calculations and also because network modelling was required to assess the impact of rezoning up to 50 ha.

⁴⁶ Mr Sean McLeod, EIC, undated, para 13

⁴⁷ Ibid, para 8

⁴⁸ Email from Mr Sean McLeod to Ms Rosalind Devlin dated 27 September 2017

⁴⁹ R. Devlin, Reply Evidence, 6 October 2017, paragraph 2.3

⁵⁰ Ibid, paragraph 2.8

⁵¹ Ibid, paragraph 2.7

106. Mr McLeod said that Mr Glasner’s infrastructure recommendations (for the estimated additional 120 – 130 lots) did not appear to agree with others close by the proposed MDR rezoning within Goldfields eg., Submission 150 (Mt Crystal Limited).⁵²
107. In response, Mr Glasner said:
- “Queenstown Hill may appear to have disparities in my response when looking at the submission in this way. However, the water servicing in this area is complex because of elevation changes, different pressure zones and areas pressurised from different reservoirs. Different areas have also been planned for water and wastewater upgrades in the LTP which affected my evidence on various submissions. Goldfield Heights is also an existing development area with services currently nearing capacity, that is more difficult and costly to upgrade than a Greenfields site.”⁵³*
108. At the hearing, Mr McLeod explained that most of the infrastructure within BC22362 is owned and maintained by the Body Corporate.⁵⁴ He addressed Mr Glasner’s concern that the existing network does not have existing capacity. Mr McLeod said that, due to their grade, the two wastewater lines crossing Frankton Road are likely to be the constraint points as confirmed in Mr Glasner’s evidence for Submission 150 (Mt Crystal Limited). He offered two possible solutions to this constraint in the wastewater network. Mr McLeod also suggested that water could possibly be linked from the top of Goldfields Heights to the new Middleton Road reservoir as the land in Submission 336 (Middleton Family Trust) was developed.
109. QAC lodged a further submission opposing the rezoning of currently vacant land and/or enabling intensification of existing or residentially zoned land because this will bring more people to the aircraft noise effect now and into the future. Mr Kyle’s evidence was that the best form of protection available to avoid potential reverse sensitivity effects is to avoid development ‘coming to the effect’ in the first place.⁵⁵ However the submission site is not located within the OCB and QAC has not initiated a plan change seeking to extend the OCB.
110. In summary, Mr McLeod sought reconsideration of the zoning of BC22362.
- 13.6. Rezoning Frankton Marina to Queenstown Hill, including Goldfields Heights, and Fernhill/Sunshine Bay**
111. Mr McLeod also presented submissions addressing the strategic zoning issues raised in Submission 391 i.e., the request that a large area of land from Frankton Marina to Queenstown Hill and in Fernhill/Sunshine Bay be rezoned to MDRZ.
112. Mr & Mrs McLeod supported widespread rezoning to MDRZ because they believe that Queenstown cannot keep carving up its rural land ‘ad nauseum’ as has been done in the past decade. Land already zoned residential should be used more efficiently and the only way to do this is by greater intensification and by building smaller which the MDRZ allows.⁵⁶
113. He described the actual and potential development intensity of land in the subject area giving examples such as Panners Way. He considered that the operative medium density sub-zone

⁵² S. McLeod, EIC for Submission 389, undated, paragraph 8

⁵³ U. Glasner, Rebuttal Evidence, 7 July 2017, paragraph 5.17

⁵⁴ S. McLeod, EIC for Submission 389, undated, paragraph 10; Summary Statement, 16 August 2017, paragraphs 8 - 13

⁵⁵ J. Kyle, EIC, 9 June 2017, paragraphs 6.4 – 6.8

⁵⁶ S. McLeod, Summary Statement for Submission 391, 16 August 2017, paragraphs 2 - 3

had already increased the density from the (notified) LDRZ requirement. In his opinion, there would be less of a difference between the numbers of dwellings in the LDR and MDR than Ms Devlin used.⁵⁷

114. In addition, he said that due to the nature of the land on Queenstown Hill and Fernhill, geotechnical, parking and access requirements along with newly built million-dollar housing means that there is unlikely to be 250m² maximum density over the whole area in the short to medium term.⁵⁸

115. In addition, Mr McLeod commented on the rate of development should rezoning be accepted in the context of what he saw as the key constraint, namely provision of infrastructure services. He considered there would not be an immediate demand for additional infrastructure services and that upgrades could be planned as part of the 10-year plan process and funded through development contributions.⁵⁹

116. He concluded by saying that:

“the area proposed for MDR rezoning fits entirely within Objective 8.2.1 and its policies in that medium density development will be realised close to town centres, local shopping zones, activity centres, public transport routes and non-vehicular trails in a manner that is responsive to housing demand pressure.”⁶⁰

117. Mr Glasner continued to oppose the rezoning because he still required further information around density to rerun his infrastructure calculations. In addition, network modelling for water supply and wastewater is required to assess the impact of the proposed increase of the development site up to approximately 50ha.⁶¹

118. Ms Devlin agreed with Mr McLeod that most of the sites that are the subject of the submission meet many of the objectives for the MDRZ (particularly in regard to location). She saw a number of benefits associated with upzoning within the UGB however upzoning must be accompanied by development infrastructure. In addition, she relied on Ms Kim Bank’s opinion that additional upzonings of land to higher intensities are not required for the PDP timeframe.⁶²

119. Ultimately, Ms Devlin relied on Mr Glasner’s ongoing concerns about lack of information on infrastructure matters to recommend that the rezoning request should be rejected.

120. QAC’s further submission opposed intensification on the same basis as it did for Submission 389 (see paragraph 113 above).

13.7. Discussion of Planning Framework

121. In the PDP, Chapter 3 Strategic Direction seeks to manage urban growth in a strategic and integrated manner. Urban development should promote a compact, integrated urban form, ensure a mix of housing opportunities and be integrated with existing and planned infrastructure (recommended Objective 3.2.2.1). This objective is given effect by

⁵⁷ Ibid, paragraphs 7 - 9

⁵⁸ S. McLeod, EIC for Submission 391, undated, paragraph 11

⁵⁹ Ibid, paragraph 13

⁶⁰ Ibid, paragraph 21

⁶¹ U. Glasner, Reply Evidence, 6 October 2017, paragraphs 3.2 – 3.4

⁶² R. Devlin, Rebuttal Evidence, 7 July 2017, paragraph 5.4

recommended Objectives 4.2.2A and 4.2.2B Urban Development which provide for the allocation of land within the UGB into zones which are reflective of the appropriate land use having regard to transport, a mix of housing densities and forms and the function and role of town centres, among other matters.

122. The LDRZ is the largest residential zone in the District. In Chapter 7 as recommended it is renamed the Lower Density Suburban Residential zone to more accurately capture the range of traditional and modern suburban densities and housing types enabled. Objective 7.2.1 provides for *'a mix of compatible suburban densities and a high amenity low density residential environment for residents...'*. Policy 7.2.1.2 encourages development that *'maintains suburban residential amenity values including predominantly detached building forms, and predominantly one or two storey building heights.'* Policy 7.2.1.3 seeks to maintain amenity values between sites, in particular privacy and access to sunlight. A clear theme is the maintenance of suburban character and high amenity values. Commercial activities are generally discouraged.
123. The purpose of the MDRZ is to enable a greater supply of diverse housing options for the District at a higher density than the LDRZ. Development controls are designed to ensure that the reasonable maintenance of amenity values is maintained. MDR zones should be easily accessible to local shopping centres, town centres or schools by public transport, cycling or walking.
124. The area subject to this submission is not located within the OCB.

14. ISSUES

- a. The most appropriate zone for the Body Corporate site
- b. The most appropriate zone for the wider area from Frankton Marina to Queenstown Hill, including Goldfields Heights, and Fernhill and Sunshine Bay

15. DISCUSSION OF ISSUES AND CONCLUSIONS

125. The Council's witnesses and Mr McLeod agreed on most matters but due to the Council's infrastructure concerns, they did not agree that MDR was an appropriate zoning for BC22362 or the wider area at this time.
126. With respect to BC22362, they agreed that the most likely estimated yield under MDR would be zero to 30 additional units. Knowing the way in which body corporates operate, we are inclined to agree with Mr McLeod that the likely outcome would be closer to zero in practice.
127. Ms Devlin and Mr McLeod also agreed that MDR zoning would recognise the existing intensity of development within BC22362 and be more enabling of additions and alterations such as construction of new garages by comparison to the LDRZ provisions. We concur.
128. They further agreed that the BC22362 site and the wider area met many of the objectives for the MDRZ, particularly location. For instance, this land is close to the town centre, local shopping, activity centres and public transport. In principle, we too agree that BC22362 and the wider area are suitable for MDR zoning and that changing the zoning from LDR to MDR would satisfy Objective 8.2.1.

129. Having agreed that BC22362 and the wider area are suitable for MDR zoning, the next question is whether it is necessary to up-zone the BC22362 site and the wider area at this time? Mr McLeod urged the Council to plan ahead by rezoning now because of the length of time it would take for redevelopment to occur, perhaps up to thirty years. Ms Devlin disagreed. She relied on Ms Kim Bank's evidence that additional up-zonings of land to higher intensities are not required for the PDP timeframe.
130. Early in the Stream 13 hearings, we heard evidence from Mr Phil Osborne on the results of the dwelling capacity modelling required by the NPSUDC and from Ms Kim Banks on its planning implications. As discussed in the overview,⁶³ the PDP provides an adequate supply of zoned land for residential purposes for many years ahead however bringing this land to market in a timely manner is an issue due to land banking. Among other responses designed to deal with land banking, Mr Osborne recommended increasing the area zoned MDR because, over time, this would encourage the redevelopment of residential sites within the UGB. Mr McLeod's examples including his discussion of Panorama Terrace and the 50 to 60 year development cycle supported Mr Osborne's opinion.⁶⁴ The submitters have thus identified an area suitable for upzoning in terms of the capacity enablement recommended by Mr Osborne.
131. Turning now to the provision of infrastructure which is a key factor in terms of timing, the PDP requires urban growth to be managed in a strategic and integrated manner (Strategic Objective 3.2.2). It seeks a compact and integrated form within the UGB that is coordinated with the efficient provision of infrastructure (recommended Objective 4.2.2A). Accordingly, whether BC22362 or the wider area should be rezoned at this time is dependent on the planned provision of infrastructure.
132. Mr McLeod addressed this matter and because he is a surveyor, we accept that he is qualified to make general observations on the provision of infrastructure in relation to land development. He told us that a majority of the infrastructure within BC22362 is owned by the body corporate. Mr McLeod identified the two wastewater lines crossing Frankton Road as the likely constraint on intensification of Goldfields based on Mr Glasner's evidence regarding Submission150 (Mt Crystal Limited). He suggested possible solutions for both water and wastewater services that would enable intensification of BC22362 and Goldfields Heights.⁶⁵
133. Mr McLeod's statement also raised important questions about the adequacy of the existing roads and water and wastewater network to service the development enabled under the PDP in the wider area. Mr Glasner shared this concern and did not support upzoning at this time. As noted above, the infrastructure network on Queenstown Hill is complex and, in his opinion, there was a need to undertake network modelling in order to assess the impacts of upzoning an area of 50 ha.
134. We consider that rezoning BC22362 to MDRZ is appropriate for four reasons. First, there is a low probability of new dwellings being built within the Body Corporate site due to the limitations imposed by governance. More likely there will be occasional additions and alterations carried out over the next decade and these will place limited demands on existing infrastructure. Second, network upgrades provided for in the LTP will alleviate problems in the Goldfields area in time. Third, an MDRZ reflects the existing pattern of development.

⁶³ Report 17-1, Section 3

⁶⁴ S. McLeod, Summary Statement for Submission 391, 16 August 2017, paragraph 11

⁶⁵ S. McLeod, Summary Statement for Submission 389, 16 August 2017, paragraphs 8 - 13

Finally, there are benefits from MDR zoning because this enables residents to improve their homes without needing resource consent for minor additions and alterations.

135. In our view, rezoning the wider area to MDRZ would be contrary to the strategic direction of the PDP at this time because the efficient provision of infrastructure is not assured. Whilst we agree that MDRZ is the most appropriate zoning for much of the area between Frankton Marina and Queenstown Hill, and for Fernhill and Sunshine Bay, Mr Glasner's evidence on the need to plan for the necessary infrastructure upgrades was compelling. We consider that coordinating intensification with infrastructure provision for this area requires further analysis and deliberate long-term planning by the Council prior to rezoning.
136. In our view, there is no urgency to rezone the wider area because there is an adequate supply of residential land already zoned within the District. However, we consider that achieving a compact, integrated urban form will necessitate up-zoning in the area identified by the submitters sooner rather than later due to the length of the development cycle (decades rather than years). The benefits of increased land supply in terms of housing affordability will similarly take decades to be realised.
137. Finally, with respect to QAC's further submission, we consider it is not sound resource management practice to limit development potential in the face of uncertainty about the future of the airport particularly in a location like Queenstown which has topographical constraints that limit the land available for urban development. For a full discussion of QAC's further submissions on sites not located within the ANB or OCB, see Report 17-1.⁶⁶

16. RECOMMENDATION

138. For the reasons set out above, we recommend that;
 - a. Submissions 389 and 391 be accepted in part; and
 - b. FS 1331 be accepted in part; and
 - c. FS1340 be rejected; and
 - d. Medium Density Residential zoning be applied to the BC22362 site as shown on Planning Map 32 but not to the wider area from Frankton Marina to Queenstown Hill, including Goldfields Heights, and Fernhill and Sunshine Bay.

⁶⁶ Refer Report 17-1, Section 5.3

PART E: FRANKTON MARINA/SUGAR LANE AREA

Submitters **DON LAWRENCE for DS EE PROPERTIES LTD (Submission 16); KENNETH MUIR (Submission 125); AND Z ENERGY LTD (Submission 312)**

Further Submissions

- FS1214.2 – Z Energy Ltd – support (16)
- FS1340.51 – Queenstown Airport Corporation – oppose (16)
- FS1214.3 - Z Energy Ltd – support (125.1)
- FS1340.56 - Queenstown Airport Corporation – oppose (125)
- FS1214.4 – Z Energy Ltd – support (125.2)
- FS1340.57 - Queenstown Airport Corporation – oppose (125)

17. PRELIMINARY MATTERS

17.1. Subject of Submissions

139. These submissions related to the Frankton Marina/Sugar Lane area and the Z Energy fuel station at 846 Frankton Road.

17.2. Outline of Relief Sought

140. The submission of Don Lawrence/DS EE Properties Ltd (16) sought that Sugar Lane be rezoned from LDR to a commercial zoning.

141. Kenneth Muir sought to change the Sugar Lane area from LDR to BMUZ.

142. For the avoidance of doubt, we note that neither of the above submissions indicated whether the Mantra Apartments were intended to be included in the request for rezoning.

143. Z Energy sought to change the zoning of 846 Frankton Road to enable business or higher intensity residential purposes: LSCZ, MDR or HDR, or consistent with any rezoning of the existing commercial properties along Sugar Lane and opposite the site.

17.3. Description of the Site and Environs

144. Sugar Lane is an area of mixed uses notwithstanding its LDR zoning. Activities include boating related businesses, offices, an historic cottage, Scout Hall, Pier restaurant, parking and residential uses including the Mantra Apartments (on the eastern side). There is an existing consent at Frankton Marina (RM 140061) which gives approval to 195 marina berths and associated commercial buildings, parking and open space. Z Energy is located on the opposite side of SH6A (Frankton road) on the corner of Marina Drive. The annual average daily traffic (AADT) on SH6A was recorded to be 25,818 for the December 2016 count obtained from NZTA.⁶⁷ The area is shown in Figure 5-5.

⁶⁷ W Banks, EIC, 25 May 2017, paragraph 5.115

Figure 5-5 - Aerial photograph of Frankton Marina/Sugar Lane area and Z Energy fuel station showing existing uses

17.4. The Case for Rezoning

145. Submitters 16 and 125 did not attend the hearing and did not provide any evidence in support of rezoning the area from LDR to a commercial or higher density residential zone. For Z Energy, Burton Consultants Ltd provided a letter containing a statement representing Z Energy's views.⁶⁸ All made the point that existing commercial development in Sugar Lane was inconsistent with LDR zoning. In his submission, Mr Muir said that BMUZ would be the ideal zoning to allow the Sugar Lane area to become a vibrant development in support of a new marina.
146. Z Energy's submission pointed out that their existing service station was in close proximity to commercial activities at Sugar Lane and was physically separated from residential properties to the north and east by existing roads and to residential zoning to the south by Frankton Road. The submission stated that the rezoning sought (LSC, MDR, HDR) would be more consistent with the intent of the PDP. In the letter provided by Burton consultants Ltd, Z Energy continued to maintain that LDRZ would be an inappropriate zone for the site and Sugar Lane area.
147. QAC opposed Submission 16 and Submission 125 out of concern that any rezoning would result in intensification of ASAN establishing in close proximity to Queenstown Airport. Mr Kyle's evidence was that the best form of protection available to avoid potential reverse sensitivity effects is to avoid development 'coming to the effect' in the first place.⁶⁹
148. For the Council, Ms Kim Banks considered the suitability of MDR zoning in the Frankton area generally and in the Frankton Marina/Sugar Lane area more particularly (as part of her

⁶⁸ Burton Consultants Ltd on behalf of Z Energy, letter dated 9 June 2017 and tabled at the hearing

⁶⁹ J. Kyle, EIC, 9 June 2017, paragraphs 6.4 – 6.8

evaluation of the submission by NZIA⁷⁰). In her opinion, the notified LDRZ did not accurately reflect the mix of activities present in Sugar Lane. While the location itself may be suitable for MDRZ, the existing activities were inconsistent with its purpose and over time, MDR zoning would have the potential to constrain these businesses. In her opinion, there was no alternative zoning that would adequately reflect this current mix.⁷¹ Ms Kim Banks did not support rezoning the site to MDRZ or HDRZ which would facilitate intensification and additional trip generation on the site.

149. For the Z Energy site, Ms Kim Banks evaluated the options of MDRZ and HDRZ, concluding that a spot zoning surrounded by LDRZ was undesirable and, in the case of HDRZ, could lead to development of a scale that was out of character with the neighbourhood. While she acknowledged that the site did not exhibit LDRZ characteristics, neither MDRZ nor HDRZ were more appropriate.⁷²
150. Also for the Council, Ms Evans acknowledged that the zoning of this area was challenging and that LDRZ was not reflective of the existing land uses.⁷³ In her opinion, some form of marine based commercial zone or structure plan or outline development plan that considered the future of Sugar Lane as a whole would be beneficial. Any such proposal should include the Z Energy site.⁷⁴ Ms Evans considered that alternative zones such as LSCZ would facilitate intensification and additional trip generation which would be detrimental to the operation of the Sugar Lane/SH6A/Marina Drive intersection. LSCZ or BMUZ would also create tension with a number of policies in the Strategic Direction that seek to avoid undermining existing centres.
151. In forming their opinions, Ms Kim Banks and Ms Evans relied on the evidence of Ms Wendy Banks, a transportation engineer. Ms W Banks considered that turning movements into and out of the side roads was currently challenging due to the high traffic volumes on SH6A. She opposed the rezoning sought for commercial activities, unless it could be demonstrated that the right turn movements out of Sugar Lane could be managed safely either through a reduction in the zoning area sought or by upgrading the intersection to signals or a roundabout. Z Energy noted that anticipated intersection upgrades due to the marina development were not reflected in the Section 42A Reports. This consent had not been implemented at the time of writing this report therefore it is not known whether or when these intersection upgrades will be done.

17.5. Discussion of Planning Framework

152. Sugar Lane, the Z Energy site and wider area are zoned LDR in the PDP. In Chapter 7 as recommended it is renamed the Lower Density Residential zone to more accurately capture the range of traditional and modern suburban densities and housing types enabled. Objective 7.2.1 provides for *'a mix of compatible suburban densities and a high amenity low density residential environment for residents...'*. Policy 7.2.1.2 encourages development that *'maintains suburban residential amenity values including predominantly detached building forms, and predominantly one or two storey building heights.'* Policy 7.2.1.3 seeks to maintain amenity values between sites, in particular privacy and access to sunlight. A clear theme is the maintenance of suburban character and high amenity values. Commercial activities are generally discouraged.

⁷⁰ Submission 238

⁷¹ K Banks, Section 42A Report, 25 May 2017, paragraphs 18.12 – 18.16

⁷² K Banks, Section 42A Report, 25 May 2017, paragraphs 12.6 – 12.20

⁷³ R Evans, Section 42A Report, 24 May 2017, paragraphs 6.14 & 6.26

⁷⁴ Ibid, paras 6.18 & 6.31

153. In addition to LDRZ, the PDP provides for MDR and HDR zones. The purpose of the MDRZ is to enable a greater supply of diverse housing options for the District at a higher density than the LDRZ. Development controls are designed to ensure that the reasonable maintenance of amenity values is maintained. MDR zones should be easily accessible to local shopping centres, town centres or schools by public transport, cycling or walking.
154. The HDRZ provides for efficient use of land within close proximity to town centres that is easily accessible by public transport, cycle and walkways. In Queenstown, it enables taller buildings than in other residential zones, subject to high design quality. Development controls provide minimum of protections for existing amenity values, and are otherwise prioritised towards enabling the community's wellbeing by promoting growth and development. There is a focus on intensification and small scale commercial activities are enabled to support larger residential developments, or to provide low impact local services.
155. The LSCZ, as recommended in Chapter 15, enables small scale commercial and business activities in discrete pockets of land that are accessible to residential areas and people in transit. The function of these local shopping centres is to meet the day to day needs of the community for convenient access to goods and services. These small scale centres should not undermine the role and function of town centres.
156. BMU zoning provides for complementary commercial, business, retail and residential uses that supplement the activities and services provided by town centres. Higher density living opportunities close to employment and recreational activities are also enabled. Significantly greater building heights are enabled in the Business Mixed Use Zone in Queenstown, provided that high quality urban design outcomes are achieved.
157. Designation 165 covers part of this area (Frankton Marina Local Purpose Reserve). In the PDP, this riparian reserve has been zoned Informal Recreation under the Stage 2 Variations.
158. The OCB for Queenstown Airport traverses a handful of lakefront properties at the western end of Sugar Lane. However the witnesses for both the Council and QAC proceeded on the basis that the submission sites were not within the OCB. This is not material given our recommendation to retain LDRZ.

18. ISSUES

- a. Traffic
- b. The most appropriate zone for the Frankton Marina/Sugar Lane area

19. DISCUSSION OF ISSUES AND CONCLUSIONS

159. We accept the Council's traffic engineering evidence was uncontested. Accordingly, we find that the Sugar Lane/SH6A/Marina Drive intersection experiences long delays and queues, there are safety issues with drivers risking shorter gaps in the State Highway traffic and that an increase in trips could exacerbate the current problems unless improvements are made. On traffic grounds only, the case was made to retain LDR zoning because it enables activities with relatively low rates of trip generation. We consider however that intersection upgrades would improve traffic management therefore we do not see traffic issues as determinative of zoning.

160. Traffic issues aside, both of the Council's planning witnesses considered that the notified LDRZ did not reflect existing and consented activities in and around Frankton Marina. We examined the current zones available within the PDP and concluded that none was suitable as a means of enabling the existing mix of activities at Sugar Lane to continue operating without recourse to frequent applications for resource consents.
161. Mr Muir sought BMU zoning however this would be contrary to the overall zoning strategy which provides for BMUZ near existing town centres (Queenstown and Wanaka). We accept that the mix of activities enabled by the BMUZ is a feature in its favour, however the zone enables an intensity of development that is not appropriate in this location. In our view, if the Council's goal is to enable the growth and development of mixed uses in the Sugar Lane area, a new zone is required.
162. Mr Muir identified an opportunity to allow Sugar Lane to become a vibrant development in support of a new marina. Ms Evans appeared to agree with him insofar as she considered some form of marine based commercial zone, or a structure plan or outline development that considers the further development of the Sugar Lane area as a whole would be beneficial. Z Energy supported Ms Evans in this regard and urged the Council to pursue rezoning in the near future. We agree that Sugar Lane could be redeveloped for a wide range of activities to support a new marina (assuming it proceeds) and we consider that a planning study is an essential first step should this be the Council's goal. We find that none of the available PDP zones is suitable for this purpose.
163. We are compelled by circumstances and the lack of suitable alternative zonings to recommend that LDR zoning be retained for the reasons set out above. As it happens, retention of LDR zoning also satisfies the further submissions lodged by QAC.

20. RECOMMENDATION

164. For the reasons set out above, we recommend that:
- a. Submissions 16, 125 and 312 be rejected; and
 - b. FS1340.51, FS1340.56 and FS1340.57 be accepted; and
 - c. FS1214.2 and FS1214.3 be rejected; and
 - d. Lower Density Suburban Residential zoning be retained for the submission sites; and
 - e. The Council consider undertaking a planning study of the Frankton Marina/Sugar Lane area, including the Z Energy site, to identify its optimal future development with a view to introducing a variation to apply a form of zoning (or other method) that achieves the community's desired outcomes.

PART F: BRUCE GRANT

Submitter Bruce Grant (Submissions 318 & 434)

Further Submissions

FS1340.72 - Queenstown Airport Corporation – opposes #318

FS1340.110 - Queenstown Airport Corporation – opposes #434

21. PRELIMINARY MATTERS

21.1. Subject of Submissions

165. These identical submissions related to a property located on the corner of Marina Drive and Frankton Road, Queenstown Hill.

21.2. Outline of Relief Sought

166. The submitter sought that the site be rezoned from Rural to LDRZ and amendment of the UGB to include the property within the urban area. For clarity, we note that the scope of the submission supported the inclusion of the land within the ONL.⁷⁵ This was an error because the site is excluded from the ONL, a fact that was acknowledged elsewhere in the submission and in expert evidence.⁷⁶

21.3. Description of the Site and Environs

167. This is a steeply-sloping south-facing site on a slight knob comprising three existing lots and a right of way with an area of approximately 5,516m.² Lot 7 contains a house and the other two lots are vacant. The land was once part of the main Grant family farm which takes in most of the south-east slopes of Queenstown Hill and land further east to Frankton. The land immediately to the north and east of these lots (Lot 4 DP459375) contains an active schist debris landslide hazard and a significant slip occurred on this land following the floods of 1999 causing damage to the road and properties below Frankton Road.⁷⁷

168. Marina Drive is an established residential area overlooking the Frankton Marina and many homes enjoy views of the lake and mountains.

⁷⁵ Submissions 318 & 434, paragraphs 3.1.1(b); see also K Banks, Section 42A Report Group 1B, 25 May 2017, paragraph 3.1 where this submission is recorded as ‘being in support of the ONL’.

⁷⁶ Ibid, para 3.1.1 (a) (iii) Reasons for the Submission and L Millton, EIC, paragraph 2.5

⁷⁷ K Banks, Section 42A Report Group 1B, 25 May 2017, paragraph 23.9

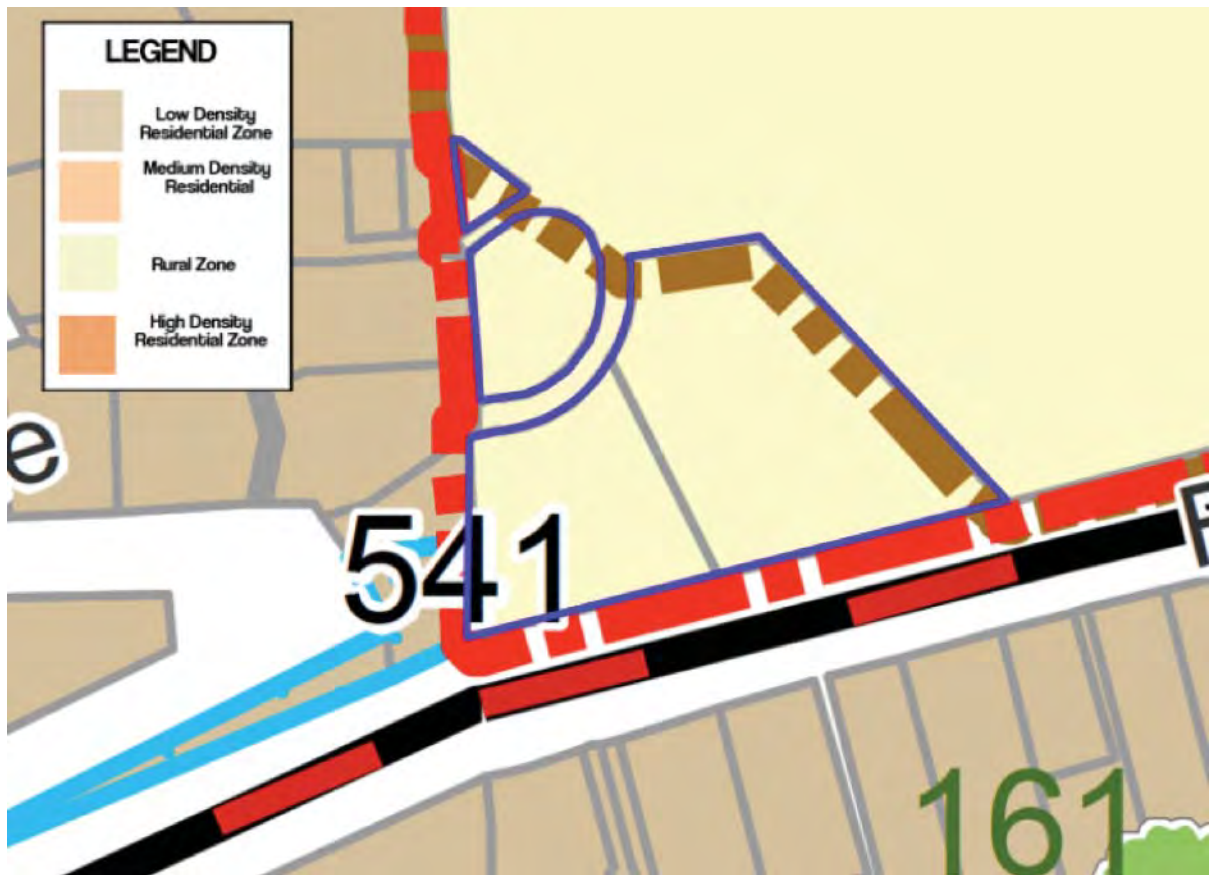

Figure 5-6 – Property subject to the submission outlined in blue

21.4. The Case for Rezoning

169. The submitter stated that the subject land has been developed (under subdivision consent RM9900009) to a level which was no longer consistent with characteristics of the Rural Zone and the area of each lot was not an economic size to be farmed. The land was serviced in accordance with residential requirements and LDR zoning would be a logical, effective and sustainable use of this land. The land was close to amenities and seen as an extension to the adjacent LDRZ. Access and geotechnical issues were acknowledged however the submitter considered these matters had been addressed.
170. Planning evidence for the submitter was presented by Ms Lucy Millton. Ms Millton responded to the concerns raised in the Section 42A Report and Rebuttal Evidence of Ms Kim Banks for the Council, specifically development yield, access and natural hazards.
171. With respect to development yield, Ms Millton disputed Ms Bank's assessment that LDR zoning would enable 8 additional dwellings on the submission site. In her opinion, Lot 7 (which already has a house) is developed to its full potential therefore it should be excluded from the calculation. Lots 6 & 10 are subject to a consent notice which prohibits building over a large area of these lots along the eastern and southern boundaries. She considered that the building restriction area and right of way should also be excluded. On this basis, the remaining area of land available for development could enable 4 additional dwellings.⁷⁸

⁷⁸ L Millton, EIC, paragraph 4.1; Summary Statement, 9 August 2017, paragraph 3.1

172. Access to a future development would be via Marina Drive utilising Lot 24 DP23191 which was purchased for this purpose. This site lies to the west of Lot 6. No access to Frankton Road was proposed nor would NZTA agree to this in any event.⁷⁹
173. Ms Millton provided two geotechnical reports prepared in 1997 and 1998 that concluded the land was suitable for future residential development subject to the recommendations set out in each report. Consent was granted to a subdivision in 2009 and these recommendations were placed on each of the titles by way of consent notice. Ms Millton addressed Ms Banks' concern that placing a consent notice on land is not a sound approach to resource management because a consent notice can be altered and does not provide a tool for management or mitigation of risk, or reduction of public exposure to risk. She described the process whereby the conditions of the consent notice would come down to any new title created and referred to section 221 of the Act which applies when a consent notice is varied or cancelled.⁸⁰
174. At the hearing, Ms Millton tabled a brief report setting out the results of a site walkover carried out by Paul Faulkner, an engineering geologist.⁸¹ This report was provided because Ms Kim Banks considered that the geological reports were done some time ago and conditions may have changed.⁸² Mr Faulkner visually compared the current site topography with the available contour data and commented on the likelihood of changes to the underlying geology since 1997. He said that:
- "... it seems reasonable to conclude that the underlying geological stratigraphy is very likely to reflect the ground conditions identified in previous geological reporting."*
175. Finally, Ms Millton addressed the concern that rezoning of the land to LDRZ sets a development expectation for the site with respect to natural hazards whereas Rural zoning would not set any expectations over the density of development. In her opinion, under LDRZ, the restrictions applying to the site would be carried through therefore 4 additional dwellings would not set any unrealistic expectations.⁸³
176. For the Council, Dr Read evaluated the ONL and concluded that:
- "The subject site contributes little if anything to the character or amenity of the wider rural landscape in this vicinity. It is my opinion that development within the site would not impinge on the adjacent ONL to any significant extent."*⁸⁴
177. The main concern expressed by Ms Banks was that she did not consider the level of geotechnical information provided prior to the hearing gave adequate certainty that:
- a. the density of development enabled by the LDRZ would not significantly increase natural hazard risk (Policy 28.3.1.2 and 28.3.2.1 of the PDP as notified);
 - b. natural hazard risk could be avoided or managed for the level of permitted development enabled under a LDRZ without resource consent (1 unit per 450m², Rule 7.4.9 of the PDP as notified); and

⁷⁹ Ibid, paragraphs 4.2 & 4.8 of EIC, and paragraph 3.2 in Summary

⁸⁰ Ibid, paragraph 4.6 of EIC

⁸¹ Exhibit 13.6, letter from Mr Paul Faulkner, Geosolve, dated 9 August 2017

⁸² K Banks, Rebuttal Evidence, 11 July 2017, paragraph 3.7

⁸³ L Millton, Summary Statement, 9 August 2017, paragraph 3.5

⁸⁴ Dr M Read, EIC, paragraph 7.3

- c. mitigation could be successfully provided on site (27.5.6 of the PDP as notified).⁸⁵
178. Ms Banks acknowledged that the land was well-located to support residential activity at increased densities.⁸⁶
179. QAC lodged a further submission opposing the rezoning of currently vacant land and/or enabling intensification of existing or residentially zoned land because this will bring more people to the aircraft noise effect now and into the future. Mr Kyle's evidence was that the best form of protection available to avoid potential reverse sensitivity effects is to avoid development 'coming to the effect' in the first place.⁸⁷ However the submission site is not located within the OCB and QAC has not initiated a plan change seeking to extend the OCB.
- 21.5. Discussion of Planning Framework**
180. The land is zoned Rural and is not included within the ONL or UGB.
181. The Zone Purpose for the Rural Zone states that the purpose of the zone is to enable farming activities and provide for appropriate other activities that rely on rural resources while protecting, maintaining and enhancing landscape values, ecosystem services, nature conservation values, the soil and water resource and rural amenity. Typically, land within an ONL is zoned Rural but this is not the case here.
182. Objectives and policies of Chapter 21 for the Rural Zone provide for a range of land uses including farming to be enabled while protecting landscape, and other natural and amenity values, recognise economic diversification sustainable commercial recreation activities.⁸⁸ Rules in the plan provide for residential and larger scale commercial recreation as discretionary activities.
183. The LDRZ is the largest residential zone in the District. In Chapter 7 as recommended it is renamed the Lower Density Suburban Residential zone to more accurately capture the range of traditional and modern suburban densities and housing types enabled. Objective 7.2.1 provides for 'a mix of compatible suburban densities and a high amenity low density residential environment for residents...'. Policy 7.2.1.2 encourages development that 'maintains suburban residential amenity values including predominantly detached building forms, and predominantly one or two storey building heights.' Policy 7.2.1.3 seeks to maintain amenity values between sites, in particular privacy and access to sunlight. A clear theme is the maintenance of suburban character and high amenity values. Commercial activities are generally discouraged. Winton Partners sought either LDRZ, MDRZ, HDRZ or BMUZ.
184. The Strategic Direction includes Policy 3.2.2 as recommended which requires urban development to occur in a logical manner so as to (among other things) 'minimise the natural hazard risk, taking into account the predicted effects of climate change'.
185. This policy is implemented through Chapter 28 Natural Hazards and Chapter 27 Subdivision & Development. In addition, section 106 of the Act and sections 71 – 74 of the Building Act 2004 are important means of implementation. Overall, the Council's approach is based on case by

⁸⁵ K Banks, Supplementary Rebuttal Evidence, 11 July 2017, paragraph 3.8

⁸⁶ K Banks, Section 42A Report Group 1B, paragraph 23.12

⁸⁷ J. Kyle, EIC, 9 June 2017, paragraphs 6.4 – 6.8

⁸⁸ See Objectives 21.2.1, 22.1.8, 21.1.9, 21.1.10 and their related policies.

case assessment of the natural hazards present, their risk and methods of avoiding, remedying or mitigating any risks.

186. Chapter 28 Natural Hazards provides a policy framework to address natural hazards throughout the District. The District is recognised as being subject to multiple hazards and as such, a key issue is ensuring that when development is proposed on land potentially subject to natural hazards, the risk is managed or mitigated to tolerable levels. In instances where the risk is intolerable, natural hazards will be required to be avoided. Council has responsibility to address the developed parts of the District that are subject to natural hazard risk through a combination of mitigation measures and education, to lessen the impacts of natural hazards.
187. The Council maintains a natural hazards database and development proposals affected by, or potentially affected by, natural hazards as identified in the database will require an accompanying assessment of natural hazard risks commensurate with the level of risk posed by the natural hazards (see Policy 28.23.2.3).
188. Chapter 27 Subdivision & Development states that ‘all subdivision is able to be assessed against a natural hazard through the provisions of section 106 of the RMA. In addition, in some locations natural hazards have been identified and specific provisions apply’ (Rule 27.4.3.1).
189. Sections 71 – 74 of the Building Act 2004 apply to construction of buildings where natural hazards are identified or development is likely to accelerate, worsen, or result in a natural hazard on that land or any other property.⁸⁹
190. The submission site is not located within the OCB for Queenstown Airport.

22. ISSUES

- a. The most appropriate zone for this land
- b. Natural hazards

23. DISCUSSION OF ISSUES AND CONCLUSIONS

191. The key difference between the planning witnesses came down to their assessment of the adequacy of the natural hazards information provided and their appetite for risk. Did the submitter’s information offer sufficient certainty that the level of development enabled by the LDRZ would not significantly increase natural hazard risk?
192. Ms Millton considered that an additional 4 lots enabled by LDR zoning would not set unrealistic expectations given the existing consent notice imposed a building restriction and mitigation conditions. We infer that Ms Millton therefore considered that the risk of natural hazards would not be significantly increased by rezoning this land from Rural to LDRZ. Ms Banks based her opinion on the potential for 8 additional lots and considered this level of development would significantly increase the natural hazard risk. She identified the need to avoid or manage the natural hazard risk for permitted activities and the need for greater certainty that mitigation can be successfully provided on site.

⁸⁹ See also Report 17-1, Section 4.4

193. The PDP's approach to natural hazards requires urban development to (among other things) *'minimise the natural hazard risk, taking into account the predicted effects of climate change.'* When development is proposed on land potentially subject to natural hazards, the risk is managed or mitigated to tolerable levels. In instances where the risk is intolerable, natural hazards will be required to be avoided. In practice, whether the risk is tolerable or intolerable requires a case by case assessment based on geotechnical evidence. The Council has powers under section 106 of the Act in regard to subdivision and sections 71-74 of the Building Act to refuse consent or require mitigation where the risk of natural hazards is unacceptable. These powers apply irrespective of the zoning.
194. We consider there is little practical difference between Rural and LDR zoning when it comes to the yield from subdivision and/or development of these properties for the reasons discussed below.
195. There is a known natural hazard to the north and east of the subject land (an active schist debris landslide) and subdivision consent has been granted subject to mitigation conditions now codified in a consent notice. Consequently, we accept that residential activity is the only efficient use of this land due to the size of the lots and their location within an existing urban area. The question then becomes 'how many additional lots (if any) are likely to be feasible?'
196. In our view, the additional number of lots capable of being developed would be determined by the feasibility of mitigating natural hazards risk and the willingness of the owners to pay for mitigation. LDR zoning may in theory lead to development expectations but in this case, the owners have first-hand experience of developing land subject to natural hazards risk and this must temper expectations.
197. Furthermore, residential activity is allowable within the Rural zone and there are no specific density constraints. An application for discretionary activity consent can be made to further subdivide the land for residential purposes and may well succeed because this land is not within the ONL and is logically part of the urban area. The number of lots requested would be determined primarily by the geotechnical assessment and effectiveness of mitigation in the circumstances.
198. On the other hand, the density of development allowed as a permitted activity in the LDRZ cannot be realised unless geotechnical evidence demonstrates that building work would not accelerate, worsen or result in a natural hazard. An application for subdivision consent in this zone would be subject to the same scrutiny in terms of natural hazards as an application made under the Rural zone provisions.
199. We do not accept Ms Kim Bank's argument that consent notices can be changed therefore a residential zoning would increase the risk of natural hazards. Whilst landowners can apply for a consent notice to be removed, the Council would likely refuse to approve such an application if there were a real natural hazard on the property.
200. Accordingly, we consider that the additional lots enabled would be determined by the Council's evaluation of the geotechnical evidence provided and the potential for mitigation, not the zoning.
201. Setting aside geotechnical matters, it is also necessary to consider the strategic approach to zoning in the PDP in order to determine the most appropriate zone for this land. Both planning witnesses considered that the land was urban in character and well-located in relation to

shopping and the usual amenities. We agree. The LDRZ enables a wide range of housing types that are one to two storeys in height and its purpose is the maintenance of suburban character and high amenity values. In our opinion, this land is suited to this purpose and style of development. LDR zoning is consistent with the zoning of the nearby residential area.

202. By contrast, traditional rural activities are unlikely to be viable on these relatively small sites. Instead, an application for discretionary activity consent to establish housing would likely follow given the existing urban character of Marina Drive. For this reason, we do not consider that the outcomes intended for the Rural Zone are likely to be achieved if that zoning is retained.
203. There being no issues with access being provided from Marina Drive, we conclude that LDRZ is the most appropriate zoning for this land. It follows that the UGB should be realigned to include the land to be rezoned as LDR within the growth boundary i.e., to align with the notified ONL line.
204. Finally, with respect to QAC's further submission, we consider it is not sound resource management practice to limit development potential in the face of uncertainty about the future of airport particularly in a location like Queenstown which has topographical constraints that limit the land available for urban development.⁹⁰

24. RECOMMENDATION

205. For the reasons set out above, we recommend that:
 - a. Submissions 318 and 434 be accepted, and
 - b. FS1340.72 and FS1340.110 be rejected; and
 - c. The submission site be rezoned from Rural to Lower Density Suburban Residential Zone and the Urban Growth Boundary be amended to align with the notified landscape classification line as shown on Planning Map 33.

⁹⁰ Refer Report 17-1, Section 5.3

PART G: MIDDLETON FAMILY TRUST

Submitter Middleton Family Trust (Submission 393)

Further Submissions

FS1077.14 Board of Airline Representatives of New Zealand (BARNZ): Opposes

FS1340.93 Queenstown Airport Corporation: Opposes

FS1097.260 Queenstown Park Limited: Support

FS1270.104 Hansen Family Partnership: Opposes

25. PRELIMINARY MATTERS

25.1. Subject of Submission

206. These submissions related to an area of approximately 114ha at the top of Queenstown Hill.

25.2. Outline of Relief Sought

207. The submission requested that the land be rezoned from Rural to Airport Mixed Use⁹¹.

25.3. Description of the Site and Environs

208. The site is at the top of Queenstown Hill. Gorge Road is to the west and the Frankton Arm of Lake Wakatipu and the strip of residential land alongside Frankton Rd is to the east. The site is shown in Figure 5-7 below.

Figure 5-7 – Submission site in red. Proposed access roads shown in yellow and brown, possible cable car route in blue. Sourced from Submission 393 Attachment B

25.4. The Case for Rezoning

209. The submitter considered that while the location and size of the Queenstown Airport was sufficient to ensure continuation of core air transportation, the submitter was not satisfied that projected expansion for commercial and private light aircraft and helicopter operations could occur within the proposed boundaries of the Airport Mixed Use Zone. It stated that

⁹¹ This has been renamed Airport Zone by the Stream 8 Hearing Panel and we use that term.

there was no land in the Wakatipu Basin of sufficient size to support such operations which was sufficiently removed to ensure none/minimal reverse sensitivity issues between residential occupation and aircraft operation.

210. The submitter stated that the "Air Park' would be in a unique location to avoid adverse effects upon surrounding properties and would alleviate pressure on Queenstown Airport, while allowing continued expansion in facilities and infrastructure for helicopter, flightseeing and general aviation operations. It stated that site was located 850m horizontally and 380m vertically from its nearest neighbour on Gorge Road, and there was a considerable landmass between residential zones to the east of Queenstown Township and those above Frankton Road; and site could be accessed by two existing metalled roads, one from Tucker Beach Road and one from Frankton Road. There was also potential for a cable car from Gorge Road providing for a park and ride.
 211. No evidence was provided and the submitter did not appear at the hearing.
 212. The Board of Airline Representatives of New Zealand⁹² opposed the proposal because of concerns about reverse sensitivity effects at Queenstown Airport.
 213. Queenstown Airport Corporation⁹³ opposed the proposal in the absence of an aeronautical study confirming site suitability. It stated rezoning may result in significant adverse effects on QAC and on the wider environment that have not been appropriately assessed in terms of s32 RMA.
 214. Hansen Family Partnership⁹⁴ opposed on the basis of adverse effects upon Hansen Family Partnership land.
 215. The council's reporting experts all noted insufficient information had been provided to assess potential issues and adverse effects in their fields, including landscape, ecology, noise, infrastructure, noise, infrastructure and natural hazards. The submitter did not attend the hearing and we received no further information other than that contained in the submission.
- 25.5. Discussion of Planning Framework**
216. The site is in the Rural Zone and within the ONL. Objectives and policies in Chapters 3 and 6 require the identification and protection of ONL's.⁹⁵

26. ISSUES

- a. Landscape
- b. Ecology
- c. Noise
- d. Infrastructure

⁹² FS1077

⁹³ FS1340

⁹⁴ FS1270

⁹⁵ Objective 3.2.5, Policy 3.2.5.1, 3.3.29, 3.3.30 and 6.3.1.1

- e. Natural hazards
- f. Effects on operations at Queenstown Airport

27. DISCUSSION OF ISSUES AND CONCLUSIONS

217. Mr Buxton⁹⁶ stated that the submitter had provided insufficient information to begin to assess the requested rezoning, including landscape, hazards, noise, services, traffic, ecology, amenity and economic effects. We agree and add to his list any potential effects on operations at Queenstown Airport. The information is not merely insufficient, but practically non-existent.
218. This is not a new proposal. The site has been considered previously and discarded in earlier planning studies investigating options for airport development in Queenstown⁹⁷. Those investigations were looking for sites for the entire airport. This submitter is only seeking to provide for “non-core” light commercial aircraft and helicopters, operating in conjunction with the existing airport. However the interplay between this site and the existing airport would need to be assessed, as would all the environmental effects.
219. Ms Rachel Tregidga for QAC put it succinctly when she said:⁹⁸

The detail provided in the submission is inadequate to ascertain with any certainty what is proposed and how it might relate to or interplay with operations at Queenstown Airport, and at the time of writing this evidence, no further information has been made available by the submitter.

It is noted that any establishment of an aerodrome would require CAA acceptance of a comprehensive risk based aeronautical study. In addition, key criteria for evaluating a site should include airfield requirements (runway length, orientation, and obstacle limitation surfaces); core utilities and infrastructure services; supporting community for workforce and accommodation requirements; surface access requirements; environmental and heritage considerations, and the site’s ability to accommodate supporting landside facilities.

220. Obviously this submission is premature. It is not the same proposal previously studied by the airport authorities, but even so all the matters mentioned by Ms Tregidga would need to be investigated before the site could be considered for inclusion in the district plan.

28. RECOMMENDATION

221. For the reasons set out above, we recommend that:
- a. Submission 393.1 and FS1097.260 be rejected; and
 - b. FS1077.14, FS1240.93 and FS1270.104 be accepted; and
 - c. Rural zoning be retained on the submission site.

⁹⁶ R Buxton, Section 42A Report, 24 May 2017, paragraph 28.9

⁹⁷ R Tregidga, EIC, 9 June 2017, paragraphs 56-62.

⁹⁸ R Tregidga, EIC, 9 June 2017, paragraphs 61 - 62

PART H: SUMMARY OF RECOMMENDATIONS

222. For the reasons set out above, we recommend that:
- a. Submission 347 be accepted (Part A);
 - b. Submission 336 be accepted and Further Submission 1340 be rejected (Part B);
 - c. Submission 150 be accepted in part and Further Submission 1340 be rejected (part C);
 - d. Submissions 389 and 391 and Further Submission 1331 be accepted in part, and Further Submission 1340 be rejected (Part D);
 - e. Submissions 16, 125 and 312 and Further Submission 1214 be rejected, and Further Submission 1340 be accepted (Part E);
 - f. Submissions 318 and 434 be accepted and Further Submission 1340 be rejected (Part F);
 - g. Submission 393 and Further Submission 1097 be rejected, and Further Submissions 1077, 1240 and 1270 be accepted (Part G).
223. As a consequence of those recommendations, we recommend that:
- a. Lot 102 DP 411971 be entirely zoned Lower Density Suburban Residential and the adjoining land to the north which was notified with Low Density Residential be zoned Rural, and the Landscape Classification line and the Urban Growth Boundary be aligned with the zone/site boundaries;
 - b. The Queenstown Hill Overlay Area be removed from the planning maps;
 - c. 634 Frankton Road be zoned Medium Density Residential;
 - d. The Goldfields Body Corporate land be zoned Medium Density Residential; and
 - e. The site on the corner of Marina Drive and Frankton Road be zoned Lower Density Suburban Residential and the Urban Growth Boundary be aligned with the zone boundary.
224. We further recommend that:
- a. References to Queenstown Hill Overlay Area be removed from Chapters 7 and 27 (refer Part B); and
 - b. The Council consider undertaking a planning study of the Frankton Marina/Sugar Lane area to identify its optimal further development and consider initiating a variation to apply planning controls that achieves the community's desired outcomes (refer Part E).

Appendix 1: Recommended Amendments to Chapters 8, 15, 16 and 27

Appendix 2: Recommended Zoning – Frankton North

PART A: FRANKTON NORTH OVERVIEW

1. PRELIMINARY MATTERS

1.1. Subject of Submissions

1. Parts B and C relate to an area of which we have called Frankton North, on the north side of State Highway 6 opposite the main Frankton Flats. The land extends along SH6 from Hansen Rd to Quail Rise, at the base of and rising slightly up Ferry Hill.

1.2. Outline of Relief Sought

2. The various submissions requested a variety of alternative relief, including:
 - a. rural, or any mix of Low, Medium or High Density Residential, Industrial, Business Mixed Use or Local Shopping Centre Zones; and
 - b. to amend the location of the Ferry Hill ONL line
 - c. Consequential amendments to various objectives, policies and rules.

1.3. Description of the Site and Environs

3. The land is mostly used for small-scale rural activities, with some houses and an engineering workshop, scattered trees and some shelter belts. It contains flat lands along SH6, terraces and the lower slope of Ferry Hill. Two substations, belonging to Transpower and Aurora Energy, are located part way along the strip.
4. To the south across SH6 is the Queenstown Events Centre, the Five Mile development and Glenda Drive industrial area. To the north the land rises steeply to Ferry Hill.
5. The area is shown on Figure 6-1 below.

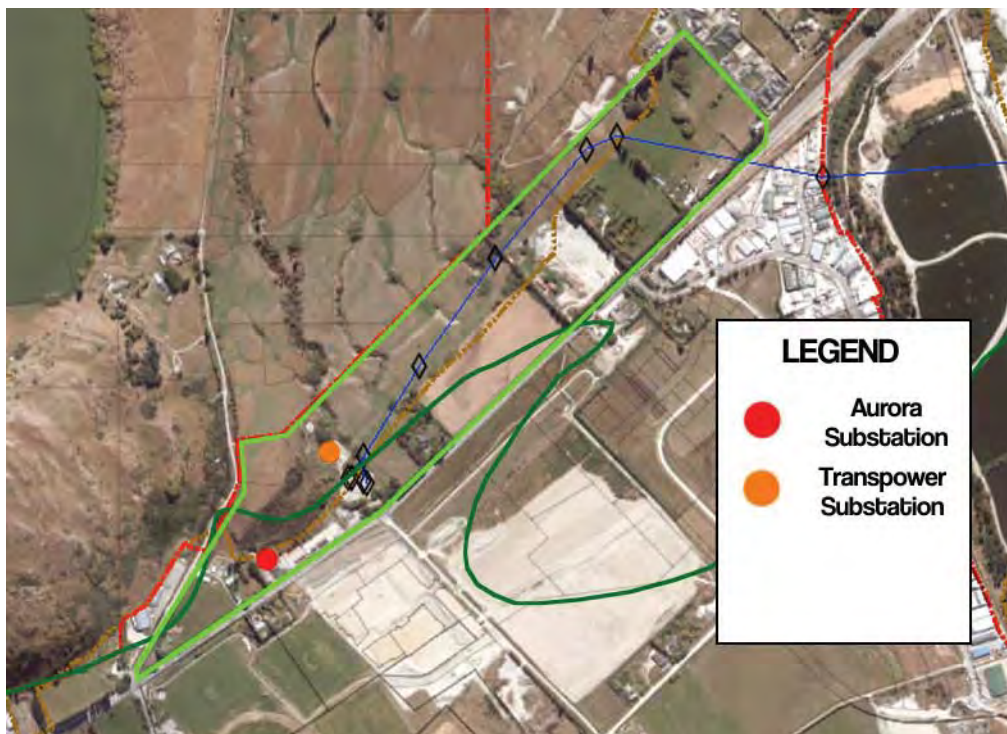

Figure 6-1 – The combined submissions sites are shown in light green outline, the notified ONL is the brown dashed line, the OCB is the dark green line and the Urban Growth Boundary is the red dashed line

6. This is a very complex strip of land to plan for, due to the various constraints which affect it. Different constraints affect all of it in different ways, including
 - a. the ONL which affects all of the properties,
 - b. airport noise at the western end of the block,
 - c. access to Hansen Rd for the western blocks,
 - d. traffic difficulties with congestion and safety issues at the Hansen Rd intersection,
 - e. pedestrian/cycle access to the commercial and community facilities on the southern side of the SH6, and
 - f. the presence of the 2 substations which divide the block and restrict any sort of unified access solution.

7. The case for the submitters was presented in several parts.
 - a. Submission 455 from W and M Grant was in respect of a wedge shaped block at the western end of the block shown in Figure 6-1, and the balance of the block.
 - b. The balance of the area was the subject of submissions from landowners in the block who presented a joint case at the hearings. As these two parts are separated by the two electricity substations and no access between them is likely to be feasible, we discuss them separately.
 - c. The Otago Foundation¹ submitted in respect of one of the sites in which it has an interest and was heard separately. We include discussion of this submission with the landowners group above.
 - d. QAC and NZTA lodged further submissions opposing the submissions of several of the landowners in the block. These submitters were heard separately but will be discussed together with the landowners group.
 - e. Mr S Spence² submitted that the land should all be zoned rural or a form of zoning compatible with the Quail Rise Zone which is adjacent to the north west. He did not attend the hearing but we will discuss this submission together with the landowners' submissions.
 - f. Sean & Jane McLeod³ submitted that the entire area should be zoned Low Density Residential. Mr McLeod was heard separately but we will discuss this submission together with the landowners' submissions
 - g. A number of other submitters and further submitters have submitted on the PDP provisions affecting this land other than mapping and will also be discussed separately.

1.4. **Notified and Recommended Zoning and Other Provisions**

8. To understand the context of the submissions and evidence of the submitters, it is helpful to explain the notified provisions and the changes recommended by the Council officers.

9. As noted above, as notified this land was crossed by the Landscape Classification line, with ONL on the northern, sloping, land, and much of the flatter southern land was within the OCB of Queenstown Airport. Also, as noted above, the entire area was within the UGB.

10. As notified, all the land between the Transpower substation outside of the OCB and Ferry Hill was zoned MDR. The remaining land, being that within the OCB, the Transpower substation and the land to the west of it, were zoned Rural, with the land between the Landscape Classification line and SH6 being shown as RLC.

¹ Submission 408
² Submission 8
³ Submission 391

11. The application of the MDRZ to this land also involved the inclusion of specific provisions in Chapter 8 applying to this land. This included a specific Objective and accompanying policies applying to this land⁴. In addition, notified Rule 8.4.11 included, as a matter of discretion: *For land fronting State Highway 6 between Hansen Road and the Shotover River, provision of a Traffic Impact Assessment, Landscaping Plan and Maintenance Program [sic], and extent of compliance with Rule 8.5.3.*
12. Notified Rule 8.5.3 set out standards applying specifically to the MDR land between Hansen Road and Ferry Hill Drive. In summary, these:
 - a. restricted access to this land to be from the Hawthorne Drive/SH6 intersection;
 - b. required provision of a Traffic Impact Assessment and specified the contents thereof; and
 - c. required a Landscaping Plan and Maintenance Program [sic] for a landscaping buffer from SH6.
13. Designations 1 and 338 applied to the Transpower and Aurora substations respectively.
14. In the Section 42A Report on MDRZ prepared for Hearing Stream 6, Ms Leith recommended amendments to the policies, partly in response to submissions and partly to make them action-oriented. She also recommended changes to the matter of discretion in Rule 8.4.11 in response to submissions, and in Rule 8.5.3, recommended deleting the requirement for a Traffic Impact Assessment and amended the landscaping requirement along SH6 to a 4m planted strip. Finally, Ms Leith recommended an additional Rule 8.5.5.2 setting a minimum density for the MDRZ at this location.
15. By a Minute dated 21 September 2016, the Chair transferred all the submissions on the specific objective, policies and rules applying to this land in Chapter 8 to this hearing stream.
16. In her Section 42A Report 5, Ms K Banks recommended the residential land be confined to the area south of the Landscape Classification line and east of the Hawthorne Drive roundabout, and that land be zoned HDR. Ms Banks adopted the recommendations of Ms Leith but transferred them into Chapter 9 with the exception of the minimum density requirement. Ms Banks additionally recommended the imposition of a setback of 50m from SH6 and 6m from Ferry Hill Drive.
17. Ms Banks recommended the remainder of the land be zoned Rural, with no changes to the UGB, OCB or Landscape Classification lines.

⁴ Objective 8.2.11 and Policies 8.2.11.1 to 8.2.11.7

⁵ Figure 5, page 17

PART B: FRANKTON NORTH – WEST END - W & M GRANT

Submitter: W & M Grant (Submission 455)

Further Submissions

- FS 1092.16 New Zealand Transport Agency - oppose
- FS1270.3 Hansen Family Partnership - support

2. PRELIMINARY MATTERS

2.1. Subject of Submission

18. This land lies at the eastern end of North Frankton and is a triangular site of 2.26 ha between Hansen Road and State Highway 6.. It is shown in Figure 6-2 below.

Figure 6-2 – Submission site

2.2. The case for rezoning

19. The submitters sought that the subject land be rezoned from Rural to either a Medium Density Zone with a Visitor Accommodation Overlay, or a zone to allow for commercial activities.
20. The case for the submitter was presented by Ms Lucy Millton, who is a planning consultant, and Mr Jason Bartlett who is a traffic engineer.
21. Mr Bartlett said that because of the density of traffic on SH6, any access to a development on the property would need to be via Hansen Rd. He acknowledged that right turns out of Hansen Rd are already difficult, and that there would be increased traffic generated through the intersection by any development. He acknowledged that development would generate pedestrian traffic across SH6 to facilities opposite and improved crossing facilities would be required. However he expected that NZTA would be upgrading the Hansen Rd intersection, probably as a left in left out only arrangement, and expected that safe pedestrian access would be able to be incorporated. Drivers going to Queenstown would need to turn left and turn back towards Queenstown at the nearby Grants Road roundabout. He said that the submitters would be prepared to cooperate with NZTA on this.
22. Ms Millton said that the site was:
- a. realistically incapable of productive rural use, being too small, and that some rural activities which might be carried out on the site, such as outdoor pig farming and strip grazing of stock would be incompatible with, and possibly offensive to, nearby activities;

- b. incapable of being developed for any form of residential activity under the Rural Zone as residential activity is prohibited within the OCB in that zone;
 - c. may need some upgrading of wastewater and water supply infrastructure to be able to proceed, but this would be achievable, if necessary at the submitters expense; and
 - d. the intersection and pedestrian safety issues would be resolved when the intersection is upgraded and the landowners would co-operate with the roading authorities to achieve this.
23. The request for a Visitor Accommodation Overlay was not discussed at all by any party, and therefore we will not take this any further because we have no evidence to base a decision on.
24. For the Council, Ms Kim Banks, in her Section 42A Report and Rebuttal evidence opposed the proposed rezoning on the grounds of inadequate infrastructure, the airport noise issue and the transport issues. However, she changed her view after the hearing and accepted that the land could be zoned BMUZ⁶.
25. For the Council, Dr Marion Read, a landscape architect said part of the site was within the ONL and opposed any rezoning of that part of the site.
26. Also for the Council, Mr Tim Heath, an economist, produced a supplementary statement of evidence as part of the right of reply report. In this he reiterated his concern that additional commercial zoning of this and other land nearby land (discussed below), a total of 6.85ha, could have an adverse effect on the viability of the Frankton town centres such as Five Mile. However he also recognised that there were constraints, such as the OCB and the general undesirability of industrial in this location. He said that if there was to be any commercial zoning then the gross floor area (GFA) or retail) should be limited but did not say by how much.
27. We note that QAC opposed this submission, on the grounds that it would potentially increase the number of residents subject to aircraft noise.
28. As with the rest of Frankton North, NZTA, in its submission, opposed any form of business development along this stretch of SH6 because of the excessive traffic generation, but was not opposed to medium density residential development provided that access was obtained from Hansen Road and development was preceded by the reconfiguration/upgrade of the intersection of Hansen Road and State Highway 6.

3. DISCUSSION OF PLANNING FRAMEWORK

3.1. Airport Noise

29. Strategic Chapters 3 and 4 contain a number of objectives and policies that are designed to allow the airport to operate successfully without constraints due to the need to protect the sensitive activities from airport from airport noise.
30. Objective 3.3.5 is to
Recognise that Queenstown Airport makes an important contribution to the prosperity and resilience of the District.
31. In support of this is a group of policies in Chapter 4 which provide

⁶ K Banks, Reply Evidence at pages 27-28

- 4.2.2.15 *Ensure appropriate noise boundaries are established and maintained to enable operations at Queenstown Airport to continue and to expand over time.*
 - 4.2.2.16 *Manage the adverse effects of noise from aircraft on any Activity Sensitive to Aircraft Noise within the airport noise boundaries while at the same time providing for the efficient operation of Queenstown Airport.*
 - 4.2.2.17 *Protect the airport from reverse sensitivity effects of any Activity Sensitive to Aircraft Noise via a range of zoning methods.*
 - 4.2.2.18 *Ensure that Critical Listening Environments of all new buildings and alterations and additions to existing buildings containing an Activity Sensitive to Aircraft Noise within the Queenstown Airport Air Noise Boundary or Outer Control Boundary are designed and built to achieve appropriate Indoor Design Sound Levels.*
32. The land is zoned Rural in the PDP. It lies entirely within the Urban Growth Boundary (the UGB). A very small portion of the site in the north east corner is within the ONL as notified. Almost the entire site is within the Queenstown Airport OCB. This provision is intended to discourage Activities Sensitive to Aircraft Noise (ASAN) from being established or manage the adverse effects of airport noise.
33. Establishment of ASAN is prohibited in the Rural Zone. Potential residential zones for the site include the LDR, MDR or HDRZ. In these zones, the establishment of ASAN is not prohibited, but it is discretionary in the LDRZ and there are requirements to ensure satisfactory indoor noise environments in all these zones. We note that at the time of notification, there was no MDR or HDR zoning within the OCB.
34. The Local Shopping Centre (LSCZ) and Business Mixed Use Zones (BMUZ), which are the zones which would achieve that aspect of the relief seeking commercial activities, require acoustic insulation for critical listening environments (including residential activities and visitor accommodation) to limit the potential for reverse sensitivity effects on Queenstown Airport for buildings within the Queenstown Airport OCB

3.2. Urban Growth

35. The site is within the Urban Growth Boundary as shown on the planning maps. Relevant Objectives and Policies in Strategic Chapter 4 include;

Objective 4.2.1

Urban Growth Boundaries used as a tool to manage the growth of larger urban areas within distinct and defensible urban edges.

Objective 4.2.2A

A compact and integrated urban form within the Urban Growth Boundaries that is coordinated with the efficient provision and operation of infrastructure and services.

Policies

4.2.1.1 Policy

Define Urban Growth Boundaries to identify the areas that are available for the growth of the main urban settlements.

4.2.1.4 Policy

Ensure Urban Growth Boundaries encompass a sufficient area consistent with:

- a. *the anticipated demand for urban development within the Wakatipu and Upper Clutha Basins over the planning period assuming a mix of housing densities and form;*
- b. *ensuring the ongoing availability of a competitive land supply for urban purposes;*
- c. *the constraints on development of the land such as its topography, its ecological, heritage, cultural or landscape significance; or the risk of natural hazards limiting the ability of the land to accommodate growth;*
- d. *the need to make provision for the location and efficient operation of infrastructure, commercial and industrial uses, and a range of community activities and facilities;*
- e. *a compact and efficient urban form;*
- f. *avoiding sporadic urban development in rural areas;*
- g. *minimising the loss of the productive potential and soil resource of rural land.*

4.2.2.3 Policy

Enable an increased density of well-designed residential development in close proximity to town centres, public transport routes, community and education facilities, while ensuring development is consistent with any structure plan for the area and responds to the character of its site, the street, open space and surrounding area.

4.2.2.4 Policy

Encourage urban development that enhances connections to public recreation facilities, reserves, open space and active transport networks.

4.2.2.12 Policy

Ensure that any transition to rural areas is contained within the relevant Urban Growth Boundary.

3.3. Transport

36. Although Chapter 29 Transport has been notified, it is too early in the submission process for us to give any weight to the objectives and policies in that chapter. However Objective 4.2.2A above is relevant as transport and roading is one aspect of infrastructure that needs to be provided and operated efficiently.

37. A very small portion of the site was within the ONL as notified. Strategic objectives and policies in Chapters 3 and 6 require the identification of ONL's and ONF's and their protection from more than minor or temporary adverse effects.⁷ The location of the ONL boundary was challenged in submissions.

3.4. Economic Impacts

38. Relevant objectives and policies from Chapter 3 include

3.2.1 *The development of a prosperous, resilient and equitable economy in the District.*

.....

3.2.1.3 *The Frankton urban area functions as a commercial and industrial service centre, and provides community facilities, for the people of the Wakatipu Basin.*

.....

⁷ See Objective 3.2.5 Policies 3. 2.5.1, 3.3.30 and 6.3.11

- 3.2.1.5 *Local service and employment functions served by commercial centres and industrial areas outside of the Queenstown and Wanaka town centres, Frankton and Three Parks, are sustained.*
- 3.2.1.9 *Infrastructure in the District that is operated, maintained, developed and upgraded efficiently and effectively to meet community needs and to maintain the quality of the environment.*

4. ISSUES

- a. Transport issues
- b. Infrastructure
- c. Airport noise
- d. Reasonable land use.

5. DISCUSSION OF ISSUES AND CONCLUSIONS

5.1. Transport and infrastructure

39. We accept that the transport issues, i.e. congestion, and safe operation of the Hansen Rd/SH6 intersection and pedestrian/cyclist crossing points would be capable of being resolved if the prospective road and intersection upgrades proceed, as appears likely. When we heard the NZTA submissions, we were told that the Hansen Rd intersection project is likely to proceed.⁸ It would be important that development did not proceed until these improvements were completed. Provisions can be devised to ensure this occurs.
40. Similarly, development would need to be restricted under the zone rules until any other required infrastructure upgrades were completed.

5.2. Airport Noise

41. We accept that in most circumstances, the location of the site within the OCB would result in development of activities sensitive to airport noise being discouraged. Most large airports in New Zealand operate under a planning regime in which an OCB, representing the 55dBA contour is shown on the planning maps⁹ and new residential activity within this contour is discouraged or controlled in various ways. This system derives from The New Zealand Standard for Airport Noise Management and Land Use Planning NZS6805:1992.
42. As described above the PDP adopts this regime for Queenstown Airport in a modified form. QAC in its further submission generally supported this approach and opposed any residential development on this site.
43. In contrast the NZTA submission opposed business development on this site because of the excessive traffic generation which would result leading to congestion and safety issues on SH6. NZTA was not opposed to higher density residential development as discussed by Mr Anthony MacColl in his evidence to the hearing.¹⁰

⁸ A MacColl, EIC at paragraph 51.

⁹ Except in Christchurch where the OCB is set at 50dBA resulting in an even more restrictive regime.

¹⁰ op cit at paragraph 52

44. With regard to landscape, we understand that the small portion of the site within the ONL is a steep gully which would be most unlikely to be developed under any zoning. The submitter did not request that the ONL be altered here, but other submitters have done so including on this property.¹¹ We note that, as discussed later in this report, we recommend moving the Landscape Classification line such that no part of this site would be within the ONL.

5.3. Reasonable Land use

45. If we accept the points of view of QAC and NZTA then the only zoning option for the site would be Rural. With regard to Rural, we accept the evidence of Ms Millton that Rural zoning would be an isolated pocket and leave the owner with few options other than retaining the existing home. If the owners did attempt some of the more intensive rural activities, this could detract from surrounding amenities. We consider this to be bordering on an unreasonable burden for the land owners to accept. It is possible that this may make the land incapable of reasonable use under section 85 of the RMA.

46. We think it is highly relevant that the site is included within the UGB. The provisions quoted above make it clear that this conveys an expectation that the land will be eventually developed for urban purposes, not rural. We do not regard this as a site providing a transition to rural as set out in Policy 4.2.2.12, as other sites to either side are also to be developed for urban purposes

47. With regard to commercial activities, we note that the LSCZ is intended to provide for local services to residential communities. We note there is a quite large and well-developed LSCZ nearby already, and the present site would be too large for any additional facilities of that sort that might be required and would be more likely to be proposed for more extensive commercial or other activity. The other option would be BMUZ. We discuss this more extensively later in this report. In brief however, we do not consider there would be significant adverse distributional effects on the viability of the developing centres on the Frankton Flats if a small additional BMUZ is established north of SH6 at Frankton. Nor do we consider there would be significant adverse traffic generation effects of concern to NZTA from this small site once the Hansen Rd intersection has been upgraded and safe crossing points over the highway established.

48. Some submitters have called for industrial zoning of sites at Frankton North. We heard no evidence about this from anyone, except Ms Kim Banks in her Section 42A Report, who said that industrial zoning at this site would be unsuitable because it forms part of the entrance to Queenstown.¹² We are inclined to doubt that it will remain at the entrance to Queenstown for much longer, but nevertheless we do consider that industrial zoning would be likely to adversely affect the amenities of the surrounding area unless it is a form of zoning that is tailored to result in an attractive appearance and an absence of external effects. We were given no evidence of such a solution and can take it no further.

49. For all these reasons, we have concluded that the most appropriate form of urban development for this site would be BMUZ.

50. We consider that amendments to the zoning provisions should be made to ensure that that development does not take place prior to the reconfiguration of the Hansen Rd/SH6 intersection together with safe crossing facilities across SH6 for cyclists and pedestrians. We

¹¹ Hansen Family Partnership – Submission 751. See discussion later in this report.

¹² K Banks, Section 42A Report at paragraph 4.33.

also consider that the provision of ASAN, which would otherwise be provided for in this zone, should be prohibited on this site.

51. This has been a very difficult site to find an appropriate urban zoning for, and nothing in the PDP suite of zones has proved completely suitable. We do not see the long term future of this site as rural for the reasons we have given. We consider the relatively minor effect on SH6 that would result, and the possible small and short term oversupply of commercial land are acceptable in all the circumstances. We consider this zoning to be the best fit of all the available options and therefore the most appropriate way to give effect to the objectives and policies relating to protection of Queenstown Airport and residents.

6. RECOMMENDATION

52. For the reasons set out above, we recommend that:
 - a. Submission 455 and FS1340 and FS 1270.3 be accepted;
 - b. FS 1092.16 be rejected in part;
 - c. The land be zoned Business Mixed Use, subject to the amendments to that zone set out in Appendix 1;
 - d. Chapter 16 be amended as set out in Appendix 1 of this report.

PART C: FRANKTON NORTH – CENTRAL AND EAST

Submitters: S Spence (Submission 8), Ian & Dorothy Williamson (Submission 140), Universal Developments Limited (Submission 177), S & J McLeod (Submission 391), P & M Arnott (Submission 399), Otago Foundation Trust Board (Submission 408), Jandel Trust (Submission 717), Hansen Family Partnership (Submission 751), FII Holdings Limited (Submission 847)

7. PRELIMINARY MATTERS

7.1. Subject of Submissions

53. These submissions related to an area of approximately 28 ha north of the SH6 at Frankton, as shown on Figure 6-1 above, which is reproduced below as Figure 6-3 for convenience. Note that some of the submissions include the Grant land (submission 455) at the south western tip of the strip which has been discussed separately above.

7.2. Outline of Relief Sought

54. The submissions requested a wide range of alternative zonings ranging from rural, through to all forms of residential, business and industrial.

55. Other submissions sought amendments relating to various PDP provisions affecting the lands requested to be rezoned.

7.3. Description of the Site and Environs

56. The land is mostly used for small-scale rural activities, with some houses and an engineering workshop, scattered trees and some shelter belts. It contains flat lands along SH6, terraces and the lower slope of Ferry Hill. Two substations, belonging to Transpower and Aurora Energy, are located part way along the strip.

57. To the south across SH6 is the Queenstown Events Centre, the Five Mile development and Glenda Drive industrial area. To the north the land rises steeply to Ferry Hill.

Figure 6-3 – the submission site

7.4. The Case for Rezoning

58. Figure 6-4 below shows the location of the properties of various submitters. Note that the Otago Foundation has an interest in the Hansen Family Trust land where it proposes to build a church complex. The Grant property discussed above is also shown.

Figure 6-4 – Landowner submitters properties

59. The case for the landowners was presented by Mr Warwick Goldsmith, legal counsel, with evidence from Mr James Bentley, landscape architect, Mr Andy Carr, traffic engineer and transport planner, and Mr Chris Ferguson, planner.

60. Briefly, the extensive range of alternative zonings requested by the submitters was narrowed down at the hearing to a request for BMUZ across all the properties, along with a request for relocation of the ONL to the uphill boundaries of the properties.

61. In opening Mr Goldsmith submitted that that the planning complexities of the site culminate in a particular planning environment which is of relatively low amenity (at least in part), is suited to a range of potential mixed use options, and which should be maximised in the most efficient way in light of its proximity to developed land, particularly given the Site's ability to

contribute to the District's foreseeable shortage of feasible commercial capacity and to the demand for centrally located residential land.

7.5. Landscape

62. Mr Bentley challenged the location of the ONL across the site, stating that it was based purely on the boundary between the flat land/terraces at the base of Ferry Hill, and the slopes of Ferry Hill itself which he regarded as too simplistic an approach, because of the cultural overlays present on the site. These include electricity substations, the National Grid power pylons, houses, tracks, shelter belts, a water race, a reservoir, grazed land a recently approved 4 lot rural residential subdivision all within the ONL. He said that all of this is influenced by the close proximity of SH6 and the adjacent mixed use developments on Frankton Flats south of SH6, which have an influence on the naturalness of the area which is a key consideration in the classification of the landscape. He recommended that the ONL boundary be set at a water race which traverses across the face of Ferry Hill a little above the flat area. He said that although the lands immediately adjacent to the water race were not significantly different from each other, land use activities are more strongly present below the water race and human influence is more prevalent.

63. In his legal submissions Mr Goldsmith drew our attention to a decision of the Environment Court, *JS Waterston v Queenstown Lakes District Council*¹³ which discusses principles applicable to the setting of ONL boundaries in a case at Ferry Hill. The Court said that there

"...there are four circumstances that suggest that the topographical should give way to a recognition of the realities of the situation."

64. In summary, the Court's four circumstances are:

- a. The presence of existing buildings in the landscape,
- b. Whether the naturalness of the land has been affected has been reduced by exotic grasses and trees,
- c. The presence of existing or consented rural residential subdivision adjacent to the site,
- d. The need for a practical boundary.

65. Mr Goldsmith said all four factors were present in this case.

66. For the Council Dr Read preferred the existing ONL line because it was, in her view, the best and most obvious change in landform, and there was no physical delineator higher up the hill. She did not accept that the water race represented a true change in the landscape character.

7.6. Transport

67. Mr Andy Carr presented transport evidence for the submitters. Accepting that direct access from properties in the block to SH6 would be unsafe and not permitted by NZTA under Limited Access Road legislation, he said that traffic access to the site would have to be largely from a new fourth leg on the Hawthorne Drive/SH6 roundabout, which was designed to allow for this. He said that there is already considerable peak hour traffic at this roundabout, and analysed what level of additional traffic would be possible while still achieving a satisfactory level of service. He calculated peak hour traffic generation from both higher density housing, and business mixed use. The standard he set out to achieve is what is known "Level of Service E" which represents a delay of 50 seconds for an approaching vehicle for any leg of the roundabout. He proposed that in order to achieve the BMUZ zoning which the landowners prefer, it would be necessary to limit traffic generation on the site, which he proposed to do

¹³ C169/2000 at page 6

by setting a limit that would allow for each hectare of land to generate 55 vehicle movements (two-way) in the peak hours (that is, 1,430 vehicle movements divided by the 26.1ha of land owned by the group). Development beyond this level would be a restricted discretionary activity to enable developments to be assessed in the light of prevailing conditions at the time.

68. Mr Carr mentioned almost in passing the possibility of a connection being made to the Tucker Beach Rd intersection further to the north east. NZTA is considering a major upgrade to this intersection. However Mr Carr did not rely on that, because trips from the submission sites would mostly be to or from Queenstown or Frankton, and Tucker Beach Rd would be a longer route.
69. For the Council, its transport expert, Ms Wendy Banks said in her Reply evidence that level of Service C would be more appropriate, which would result in an overall limit of 1200 two way vehicles in the peak hour. In her opinion, based on potential full development, the part of the site recommended for BMUZ could exceed the 1200 movements per peak hour without allowing for any contribution for the HDRZ (as recommended by Ms K Banks) portion of the site. She was not comfortable with the movements per hectare regime proposed by Mr Carr, as she thought it would be difficult to calculate and enforce, although accepting that it would allow for a fair distribution of development across the various sites, rather than allowing the earlier developments to claim a disproportionate share of the development. In conclusion, she was comfortable with a mixture of BMUZ and HDRZ on the site, but subject to floor area limits calculated across the whole site.
70. For NZTA, Mr MacColl and Mr Sizemore reiterated the Agency's opposition to any form of business zoning on the north side of SH6 at Frankton, but that it was comfortable with higher density residential forms of zoning provided these had access to an internal roading system and not directly to SH6, and provided also that safe pedestrian facilities are provided across SH6.. They did not comment on the detailed modelling or the trip generation limits discussed by Mr Carr and Ms K Banks.

7.7. Economic Impacts

71. For the Council, Mr Tim Heath, an economist, produced a supplementary statement of evidence as part of the right of reply report. In this he reiterated his concern that additional commercial zoning of this and the Grant land to the west (discussed separately above), a total of 6.85ha of BMUZ could have an adverse effect on the viability of the Franktown town centres such as Five Mile. However he also recognised that there are constraints, such as the OCB and the general undesirability of industrial in this location. He said that if there was to be any commercial zoning then the gross floor area (GFA) or retail) should be limited, but did not say by how much.

7.8. Planning

72. For the submitters, Mr Ferguson discussed various options for the zoning of the sites. With regard to the Rural Zone, he said that this should not be a repository for sites that are otherwise too difficult but in itself needs to be justified as being the best fit with the objectives and policies of the PDP. He said that the BMUZ zoning would be the most appropriate in achieving the range of objectives dealing with the role of Frankton, urban growth, protection of the airport, and landscape values. He accepted that it would be appropriate to apply some specific rules to the BMU zoning to recognise the relevant constraints and ensure appropriate management of effects. New rules were proposed to restrict activities within the OCB, ensuring appropriate acoustic insulation for sensitive activities close to the State Highway and managing vehicle access to protect the function of the State Highway.

73. He also proposed a 20 metre wide setback from SH6 for maintenance of the visual amenity of this approach to Queenstown except at the eastern end of the site where the road descends to the Shotover River and cuts into the terrace landform. He said that this did not need to be the same as the 50m setback on the southern side of SH6 because that was designed to relate to building heights there and to preserve views to the Remarkable Mountains. He considered 20 m to be sufficient for visual amenities and would also provide opportunities for possible future road widening and installation of roadside services.
74. He acknowledged that a concern for BMUZ would be whether this would create an oversupply of commercial land and have the potential to detract from the viability of other town centres, particularly at Frankton. He discussed the economic evidence for the Council by Mr Phil Osborne, who said that there were currently 46.8 ha of vacant zoned commercial land in the Wakatipu Ward and that this would not be sufficient in the long term, resulting in a predicted shortfall of 16 ha by 2048. Mr Ferguson considered that although Mr Osborne had identified potential economic risks from an oversupply of land over the short to medium term, these were only potential risks not established outcomes.
75. After the hearing, in her Reply evidence, Ms K Banks changed her position and recommended that the western end of the block (as well as the Grant land) be zoned BMUZ, with the balance outside the ONL, as recommended by Dr Read, as HDRZ, along with amended provisions addressing the various issues particular to the sites. The BMUZ portion would correspond to those parts of the properties affected in part by the OCB. She did this recognising the unsuitability of any rural zoning, avoiding issues in the OCB and keeping the business portion small enough to avoid significant economic effects on the town centres.
76. For the Otago Foundation Trust Board, Ms Alyson Hutton, a planner gave evidence in support of the Foundation's submission supporting the Council's originally proposed MDR zoning, and opposing the then recommendation in Ms K Banks' original Section 42A Report which recommended reverting the zoning west of the Hawthorne Drive roundabout to Rural. In particular, she considered the suggested Rural Zone could not be justified on its own merits and was simply a default zoning in the absence of anything else. She pointed out that the residential component of the church complex the Foundation proposed to build would be outside the part of the site within the OCB.
77. Mr Sean Mcleod gave brief evidence in support of the submission by S and J Mcleod¹⁴. They are not landowners in the block, but are residents of Queenstown with a keen interest in the hierarchy of zoning in Queenstown. Mr Mcleod said it was inappropriate to have higher density zoning on the outskirts of Queenstown; rather the highest densities should be at the centre. He did not believe the site suitable for either medium or high density. He preferred increasing the density of existing urban areas rather than continuing to spread into rural areas.
78. Stephen Spence¹⁵ did not provide evidence in support of his submission. His submission sought to remove the proposed MDRZ and retain rural zoning on the land. He stated that any development should be sympathetic to the style of development in the Quail Rise Zone. Mr Spence considered this area to be an important landscape in regard to the entranceway to Queenstown and was concerned that any development at MDR level would impinge on the amenity values of Quail Rise residents and increase the traffic in Quail Rise. Other submitters

¹⁴ Submission 391

¹⁵ Submission 8

seeking to reduce the density in this location included Ian and Dorothy Williamson¹⁶, who sought rezoning to LDRZ, although presented no evidence in support of that part of their submission.

8. DISCUSSION OF PLANNING FRAMEWORK

8.1. Airport

79. Strategic Chapters 3 and 4 contain a number of objectives and policies that are designed to allow the airport to operate successfully without constraints due to the need to protect the sensitive activities from airport from airport noise

80. Policy 3.3.5 is to

3.3.5 Policy

Recognise that Queenstown Airport makes an important contribution to the prosperity and resilience of the District.

81. In support of this is a group of policies in Chapter 4 which provide

4.2.2.15 Ensure appropriate noise boundaries are established and maintained to enable operations at Queenstown Airport to continue and to expand over time.

4.2.2.16 Manage the adverse effects of noise from aircraft on any Activity Sensitive to Aircraft Noise within the airport noise boundaries while at the same time providing for the efficient operation of Queenstown Airport.

4.2.2.17 Protect the airport from reverse sensitivity effects of any Activity Sensitive to Aircraft Noise via a range of zoning methods.

4.2.2.18 Ensure that Critical Listening Environments of all new buildings and alterations and additions to existing buildings containing an Activity Sensitive to Aircraft Noise within the Queenstown Airport Air Noise Boundary or Outer Control Boundary are designed and built to achieve appropriate Indoor Design Sound Levels.

82. A strip of land adjacent to SH6 is within the Queenstown Airport OCB and was zoned Rural when notified. The OCB provisions are intended to discourage Activities Sensitive to Aircraft Noise (ASAN) from being established or manage the adverse effects of airport noise.

83. Establishment of ASAN is prohibited in the Rural Zone. Potential residential zones for the site include the LDR, MDR or HDRZ. In these zones, the establishment of ASAN is not prohibited, but it is discretionary in the LDRZ and there are requirements to ensure satisfactory indoor noise environments in all these zones. We note that at the time of notification, there was no MDR or HDR zoning within the OCB.

84. The Local Shopping Centre (LSCZ) and Business Mixed Use Zones (BMUZ), which are the zones which would achieve that aspect of the relief seeking commercial activities, require acoustic insulation for critical listening environments (including residential activities and visitor accommodation) to limit the potential for reverse sensitivity effects on Queenstown Airport for buildings within the Queenstown Airport Outer Control Boundary.

¹⁶ Submission 140

8.2. Landscape

85. Strategic objectives and policies in Chapters 3 and 6 require the identification of ONL's and ONF's and their protection from more than minor or temporary adverse effects.¹⁷
86. As notified the Landscape classification line bisected most of the sites, with the lower flatter lands nearest SH6 outside it and the slopes up to the property boundaries within the ONL, even though they were zoned MDR. We note that there are no rules in Chapter 8 which would impose any additional controls on MDR land within an ONL.

8.3. Urban Growth

87. The site is within the Urban Growth Boundary as shown on the planning maps. Relevant Objectives and Policies in Strategic Chapter 4 include;

Objective 4.2.1

Urban Growth Boundaries used as a tool to manage the growth of larger urban areas within distinct and defensible urban edges.

Objective 4.2.2A

A compact and integrated urban form within the Urban Growth Boundaries that is coordinated with the efficient provision and operation of infrastructure and services.

Policies

4.2.1.1 Policy

Define Urban Growth Boundaries to identify the areas that are available for the growth of the main urban settlements.

4.2.1.4 Policy

Ensure Urban Growth Boundaries encompass a sufficient area consistent with:

- a. the anticipated demand for urban development within the Wakatipu and Upper Clutha Basins over the planning period assuming a mix of housing densities and form;*
- b. ensuring the ongoing availability of a competitive land supply for urban purposes;*
- c. the constraints on development of the land such as its topography, its ecological, heritage, cultural or landscape significance; or the risk of natural hazards limiting the ability of the land to accommodate growth;*
- d. the need to make provision for the location and efficient operation of infrastructure, commercial and industrial uses, and a range of community activities and facilities;*
- e. a compact and efficient urban form;*
- f. avoiding sporadic urban development in rural areas;*
- g. minimising the loss of the productive potential and soil resource of rural land.*

4.2.2.3 Policy

Enable an increased density of well-designed residential development in close proximity to town centres, public transport routes, community and education facilities, while ensuring development is consistent with any structure plan for the area and responds to the character of its site, the street, open space and surrounding area.

¹⁷ See objective 3.2.5. and Policies 3.2.5.13.3.29, 3.3.30 and 6.3.11

4.2.2.4 Policy

Encourage urban development that enhances connections to public recreation facilities, reserves, open space and active transport networks.

4.2.2.12 Policy

Ensure that any transition to rural areas is contained within the relevant Urban Growth Boundary.

8.4. Transport

88. Although Chapter 29 Transport has been notified, it is too early in the submission process for us to give any weight to the objectives and policies in that chapter. However, Objective 4.2.2A above is relevant as transport and roading is one aspect of infrastructure that needs to be provided and operated efficiently.

89. A very small portion of the site is within the ONL. Strategic objectives and policies in Chapters 3 and 6 require the identification of ONL's and ONF's and their protection from more than minor or temporary adverse effects.¹⁸

8.5. Economic Impacts

90. Relevant objectives and policies from Chapter 3 include

3.2.1 The development of a prosperous, resilient and equitable economy in the District.

.....

3.2.1.3 The Frankton urban area functions as a commercial and industrial service centre, and provides community facilities, for the people of the Wakatipu Basin.

.....

3.2.1.5 Local service and employment functions served by commercial centres and industrial areas outside of the Queenstown and Wanaka town centres, Frankton and Three Parks, are sustained.

3.2.1.9 Infrastructure in the District that is operated, maintained, developed and upgraded efficiently and effectively to meet community needs and to maintain the quality of the environment.

9. ISSUES

- a. Landscape
- b. Airport
- c. Road noise
- d. Transport
- e. Economic effects
- f. Setbacks

¹⁸ See Objective 3.2.5.1 and Policies 3.3.29, 3.3.30 and 6.3.11

10. DISCUSSION OF ISSUES AND CONCLUSIONS

10.1. Landscape

91. We have received very different opinions from Dr Read and Mr Bentley regarding the location of the ONL. Dr Read has taken the topographical approach and therefore supported the location that was notified, generally at the base of the slope. Mr Bentley took an approach which recognised physical and cultural modifications of the landscape and recommends placing it along the water race which traverses the hillside above the properties. He acknowledged that this was only an approximation of the transition from the more modified lands below the water race and the more natural lands above it.
92. We consider that there is some merit in the cultural modification approach. However we do not think the water race is a particularly suitable boundary.
93. When Ferry Hill is viewed from the highway corridor or nearby, most of it is not visible. The upper slopes are cut off by intervening topography and the skyline is quite low. The water race actually crosses this skyline. We do not think an ONL boundary should cross the skyline when seen from such a well-used location. It needs to be well below the skyline in this location. Ferry Hill is able to be viewed as a whole from further away, for example from the lower parts of Shotover County, but from that distance, the modifications to the landscape appear near the of bottom of the hill and are relatively minor in their visual impact.
94. We are unable to pinpoint an exact location where the higher and more natural landscape merges into the lower, culturally-modified landscape. We accept Mr Goldsmith's interpretation based on the *Waterston* decision discussed earlier and consider that in this location a "practical boundary" would be appropriate. The suggestion of using the water race could have been a practical boundary, but only works from distant viewpoints. The only other readily identifiable feature in this vicinity is the uphill boundary of the submission properties. We have therefore decided to adopt that as the ONL boundary in this location. We note that this will be at a very similar elevation to the houses on Trench Hill Rd at Quail Rise, adjacent to the submission sites. We note also that, other than the land that was zoned Rural when the PDP was notified (that is the Transpower site and the land west of it), moving the Landscape Classification line to the property boundaries will have no practical effect on protecting the ONL as the notified MDR zoning provided no protection in any event. We further note that this altered position corresponds to the notified UGB (which no submission sought to be altered).

10.2. Airport

95. As shown on Figure 6-3, some of the land in this group is within the OCB. QAC submitted strongly against residential use of this land. This could be resolved by zoning the land for a commercial activity, which could be BMUZ without the residential component. NZTA's evidence was firmly against BMUZ because of high traffic generation and consequent effect on SH6, and it preferred MDR because of its lower traffic generation. The Council's evidence on this was ambivalent in the end, with the economist Mr Heath concerned about the potential impact on the vitality of the Frankton centres unless the floor area was limited in some way, but recognising the inherent difficulties in finding a suitable zone for the OCB affected lands. In her Reply evidence, Ms Kim Banks recommended zoning the OCB-affected properties BMUZ from SH6 to the ONL line, rather than to the property boundaries as requested by the submitters. This would partly meet Mr Heath's concerns, as it would be a smaller area than proposed by the submitters and would therefore result in a lesser amount of floor area.

96. We have decided to accept Ms Banks' solution, in a slightly modified form. As we are also recommending altering the ONL location we do not propose to use that notified line as a boundary. We consider that there could be a BMUZ zone on the Arnott and Hansen Family Trust properties, which are the ones affected by the OCB, for a depth of 90 metres back from SH6, which we estimate would be sufficient for a double row of BMUZ activities with an internal access road between. We note that a number of the sites in the existing BMUZ zone at Gorge Road are approximately this depth.

10.3. Transport

97. Development of any sites will need to be prevented until a new road is constructed to a "fourth leg" off the Hawthorne Drive Roundabout. In addition, subdivision of sites should ensure that adequate access is provided throughout the area to this connection point.

10.4. Economic Effects

98. We understand the concern of Mr Heath, given that both he and Mr Osborne, who also gave economic evidence for the Council, said that there is at present adequate zoned commercial land in Queenstown for the short to medium term, although in the longer term, after 2038 there could be a shortage developing. However, this is a relatively small area¹⁹ of land that we are proposing for rezoning, and due to the proposed roading upgrades it will be a number of years before it can come to the market. Economic modelling is not an exact science. We are satisfied that this will achieve the objectives and policies of the PDP cited above relating to the development of the economy and functioning of town centres.

10.5. Balance of the sites

99. The balance of the sites, which are outside the OCB should remain MDRZ in our opinion, rather than HDRZ recommended by Ms K Banks. This is for two reasons. Firstly, MDRZ would provide a better transition to the Rural land which would commence at the property boundaries slightly above the bottom of Ferry Hill. Secondly we do not think that the site would not really provide good alternative access to nearby commercial and employment centres by pedestrians, cyclists and public transport, as the zone purpose for HDRZ suggests, even after the installation of safe crossing points. Further, the nearest centre, which is Five Mile, does not provide a full range of commercial, community and social facilities in any case.

10.6. Setbacks

100. In the end both Ms Banks and Mr Ferguson recommended a 20m setback along most of the frontage of these sites, in the form of a Building Restricted Area. This was said to be for visual amenity, and also to allow for future road widening and underground services. We note that NZTA already has a widening project under consideration and has not moved to designate land for this purpose, although it remains able to do so. We are not convinced of any landscape or amenity need for such a wide setback and did not receive any expert evidence on that.
101. Ms Banks proposed a 6m setback from Ferry Hill Drive, but we understood that was to create a buffer between the relatively low density of the ODP Quail Rise Special Zone and the higher density allowed by the HDRZ. Such a setback was not included in the notified rules for the MDRZ and, even if we considered it necessary, which we do not, we doubt that there is scope to apply such a setback in the MDRZ.

10.7. Road Noise

102. NZTA is concerned that residents would be adversely affected by road noise from SH6 which is a very busy road in this vicinity. Ms Banks proposed that it be dealt with by rules requiring

¹⁹ We estimate it as a little less than 3 ha in this part of Frankton North.

mechanical ventilation and an Indoor Sound Design Level so that residents would have a satisfactory indoor noise environment. We accept that this is an appropriate response to the issue. We note that recommended Rule 8.5.2 requires sound insulation for activities sensitive to road noise within 80m of any State Highway. We are satisfied that rule will provide adequate noise attenuation for residential activities.

10.8. Recommended Amendments to Chapters 8, 16 and 27

103. Submissions on particular provisions in Chapter 8²⁰ relating to this land were deferred to be dealt with by this Hearing Stream. Ms Banks recommended an amended version of Rule 8.5.3 be inserted into Chapter 9 consistent with her initial recommendation that much of the land be zoned High Density Residential.
104. In addition, a number of submission points from NZTA (719), Otago Foundation Trust Board (408 and FS1061), Peter and Margaret Arnott (399) and FII Holdings Ltd (847) relating to the PDP provisions other than zoning affecting these sites were referred to us from the Stream 8 Hearings Panel.
105. As we have discussed above, with the zoning approach we recommend, we also recommend amendments to Chapters 8, 16 and 27 to deal with the specific issues raised with the zoning of this land. We set out the recommended changes in full in Appendix 1. In summary they are:
- a. Chapter 8:
 - i. insert a new policy dealing with the effects of stormwater discharges on SH6 (Policy 8.2.8.2);
 - ii. insert two new policies dealing with external and internal roading, pedestrian and cycling connections (Policies 8.2.8.8 and 8.2.8.9);
 - iii. insert a revised matter of discretion for the erection of 4 or more residential units in this area (Rule 8.4.10);
 - iv. revise Rule 8.5.3 to remove the requirement for a traffic impact assessment and to amend the landscaping requirements;
 - b. Chapter 16:
 - i. Insert a new objective and policy specific to this land consistent with Objective 8.2.8 and its policies (Objective 16.2.3 and Policies 16.2.3.1 to 16.2.3.9);
 - ii. Include amendments to rules to make Warehousing, Storage and Lock-up Facilities and Trade Suppliers prohibited activities in this part of the BMUZ (Rules 16.4.7 and 16.4.18);
 - iii. Insert a rule making Activities Sensitive to Aircraft Noise a prohibited activity within the Queenstown Airport Outer Control Boundary (Rule 16.4.17);
 - iv. insert a new standard consistent with Rule 8.5.3 to apply to the BMUZ in this area (Rule 16.5.11);
 - c. Chapter 27:
 - i. Insertion of a new Objective and policies related to ensuring roading access through both the MDRZ and BMUZ in this area (Objective 27.3.11 and Policies 27.3.11.1 to 27.3.11.3);
 - ii. Insertion of standards specific to subdivision in this area in MDRZ and BMUZ (Rules 27.7.8.1 and 27.7.8.2).
106. We are satisfied that the combination of objectives recommended are the most appropriate way to achieve the purpose of the Act in this context, while taking into account the higher

²⁰ Notified Rule 8.5.3

order documents, the Strategic Directions Chapters and the alternatives available to us. The recommended policies are, in our view, the most appropriate way to achieve the policies.

107. For all the reasons set out above, we are satisfied that the rules we recommend are the most effective and efficient means of implementing the policies so as to achieve the objectives of Chapters 8, 16 and 27, and those in the Strategic Directions chapters. Where we have not recommended rules suggested to us, or included in the notified PDP, that is because, for the reasons set out above, we do not consider them to be effective or efficient.

11. RECOMMENDATION ON ZONING

108. For the reasons set out above, we recommend that:
- a. Submission 8 be rejected;
 - b. Submissions 140, 177, 391, 399, 408, 717, 751 and 847 and Further Submissions 1270, 1029, 1061, 1062, 1195, 1271, 1167, 1340, 1092, 1077 and 1189 be accepted in part;
 - c. The land between Hansen Road and Ferry Hill Drive be rezoned as Business Mixed Use and Medium Density Residential, the location of the Outstanding Natural Landscape boundary be amended, and the Building Restricted Area on the north side of State Highway 6 at Frankton be deleted, as shown on the map in Appendix 2 to this report; and
 - d. Chapters 8, 16 and 27 be amended as set out in Appendix 1 to this report.

PART D: WOODLOT PROPERTIES (UGB & ONL)

Submitter Woodlot Properties (Submission 501.4)

Further Submitter:

Bob & Justine Cranfield (FS1102.4), Oasis in the Basin Association (FS1289.4), FII Holdings Ltd (FS1189.11), The Jandel Trust (FS1195.10) oppose;
Hansen Family Partnership (FS1270.84) support

12. PRELIMINARY MATTERS

12.1. Subject of Submission

109. This submission relates to the south-eastern side of Ferry Hill, west of Trench Hill Road.

12.2. Outline of Relief Sought

110. The submitter sought that the ONL be shifted higher up Ferry Hill to allow for sustainable development in the Quail Rise Zone.

111. The submitter sought that the Urban Growth Boundary (UGB) line be shifted south to align with the ONL line in order to restrict further development of this area and protect the landscape value of Ferry Hill.

12.3. Description of the Site and Environs

112. The land affected is on the slopes of Ferry Hill above the present developed residential area in Quail Rise, and also on a strip of land zoned Medium Density Residential in the PDP to the west above State Highway 6, as illustrated on Figure 6-5 below. The submission land is steep, undeveloped and open. It is prominently visible from the Frankton Flats and Shotover Country and other areas to the south and east. To the south and west, down slope, is a strip of land near the base of the hill parallel to SH6 and also subject to rezoning submissions. We have referred to that area of land elsewhere in this report as Frankton Flats North.

Figure 6-5: location of the submission site

113. The land in the Quail Rise zone is not within Stage 1 of the PDP. As discussed in our Introductory Report if the land the subject of an ONL or UGB notation was never part of the PDP and was only shown on the planning maps for information, it follows that it could not be the subject of PDP notations.
114. Following this approach, we consider that the location of the UGB and ONL on the Quail Rise zone are not within the scope of our hearing and we cannot consider them. The location of these lines will need to be revisited when the Council reviews the Quail Rise zone in a subsequent stage of the PDP.
115. However the pocket of land within the submission to the south of the Quail Rise zone, between the ONL line and the zone boundary is within Stage 1. We have discussed the ONL line over this land in our report on Frankton North

13. RECOMMENDATION

116. For the reasons set out above, we recommend that:
- a. Submission 501.4 and FS1102.4, FS1289.4, FS1189.11, FS1195.10 and FS1270.84 be accepted in part; and
 - b. The ONL line be moved so that it aligns with the UGB on the north side of the Medium Density Residential Zone and ends at the point at which the zone boundaries of the Rural, Medium Density Residential and Quail Rise Zones intersect.

PART E: SCHIST HOLDINGS LIMITED AND BNZL PROPERTIES LIMITED

Submitter Schist Holdings Limited and BNZL Properties Limited (Submissions 488.1 and 488.3)

Further Submissions

FS11340- Queenstown Airport Corporation – oppose

14. PRELIMINARY MATTERS

14.1. Subject of Submissions

117. This submission related to the southern end of Glenda Drive, Frankton Flats.

14.2. Outline of Relief Sought

118. The submission sought that:

- a. the subject properties and the southern end of Glenda Drive (if not most of Glenda Drive) be rezoned from Industrial A to BMUZ; and to
- b. Amend Rule 16.5.7.1 by adding a new standard “16.5.7.2 Queenstown (Glenda Drive) a. Up to 8m – Permitted b. Up to 10m – Restricted Discretionary”.

14.3. Description of the Site and Environs

119. The submission concerned two adjoining properties located on the eastern side of Glenda Drive at its intersection with Hawthorne Drive as shown on Figure 6-6. To the east lies the Shotover River and the Council’s sewage treatment plant, which occupies the lower river terrace. These sites and the Glenda Drive area are used predominantly for industrial and commercial activities.

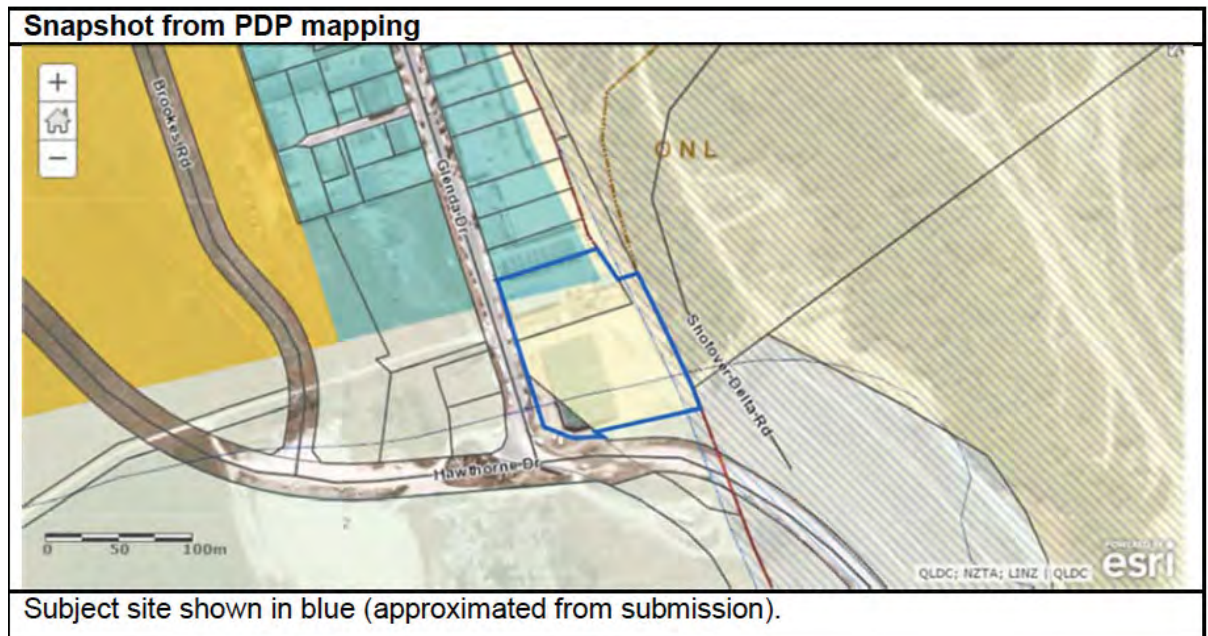

Figure 6-6 – Map showing the notified zoning of the BNZL site (on the corner) as Rural and Schist Properties Ltd as partly Rural and partly Industrial A, sites outlined in blue

14.4. The Case for Rezoning

120. The submission stated that the southern end of Glenda Drive (if not most of Glenda Drive) was more appropriately zoned BMUZ because this zoning would more accurately reflect what was happening on the ground in relation to these and other properties. No reason was given for seeking a reduction in the maximum permitted height in the BMUZ from 12m to 8m in Glenda Drive. The submitters did not appear at the hearing and did not provide evidence in support of their submission.
121. For the Council, Ms Evans noted that the submitter opposed the industrial zoning only and therefore may not have been aware that part of the land is within the Rural zone.²¹ Specifically, part of the Schist Holdings site was notified Rural in Stage 1 and the rest of that site is ODP Industrial A. The BNZL site is all notified Rural. The submission opposed the industrial zoning (not notified in Stage 1) and sought BMUZ over the whole of both sites.²² Consequently, as discussed in Report 17-1, submissions on land that was not notified in Stage 1 (i.e., ODP Industrial A) are not 'on' Stage 1 of the PDP and therefore must be rejected. There is no scope to rezone the land from Rural to BMUZ due to the defects in the submission.
122. Nevertheless, Ms Evans considered the merits of zoning both sites as BMUZ. She considered that the BMUZ would result in a level of intensification and provision for residential development that would be inconsistent with the majority of the Glenda Drive industrial area. In her opinion, applying the BMUZ to a small section of land that was part of a wider industrial area and that contains industrial uses would be an inconsistent zoning approach.²³ Also, the rezoning proposal did not consider ASAN that are facilitated by the BMUZ and how they would be managed.
123. Dr Read opposed the rezoning to BMUZ from a landscape perspective because it would facilitate a scale of buildings that would be out of step with the area and detract from the amenity of the townscape. In her opinion, a strip of land between the submitters' sites and the river terrace should remain in the Rural zone to mitigate effects of development on visual amenity enjoyed from public and private locations on the eastern side of the river.²⁴
124. Ms Evans also considered that the sites did not exhibit rural character and indicated that it may be appropriate to consider extending the industrial zone to the end of Glenda Drive. This could occur when the industrial zones were reviewed subsequently.
125. For QAC, Mr John Kyle opposed rezoning requests that would provide the opportunity for a greater number of ASAN to establish within the ANB and OCB because that would potentially give rise to adverse reverse sensitivity effects on QAC and would expose a greater number of people to the adverse effects of aircraft noise.²⁵
126. In summary, the Council's evidence supported retention of the notified Industrial A and Rural zoning but also identified the need to review the extent of the Industrial A zoning in a later stage of the Plan review.

²⁴ Dr M Read, EIC, 24 May 2017, paragraphs 6.12 – 6.16

²⁵ J Kyle, EIC, 9 June 2017, paragraphs 5.8 - 5.10 and 5.19

14.5. Discussion of Planning Framework

127. The zoning of the two properties and surrounding area are discussed above. We do not need to examine the planning framework any further however for completeness, changes proposed in Stage 2 of the review are noted.
128. As notified, public open space was zoned Rural in the PDP. In the vicinity of the submitters' properties, Rural zoning applied to the sewage treatment plant and also an area of open space on the lower river terrace. The Stage 2 Variations propose new Open Space and Recreation zones for public open space. While the Stage 2 Variations maps show that Rural zoning is retained for the designated sewage treatment plant, a strip of land to the rear of Schist Properties' site (and other industrial sites on the eastern side of Glenda Drive) is now proposed to be zoned Informal Recreation. This proposed change does not affect our recommendation.
129. The submission sites are located within the OCB for Queenstown Airport.

15. ISSUES

- a. The most appropriate zone for the submitters' properties and Glenda Drive.
- b. Scope

16. DISCUSSION OF ISSUES AND CONCLUSIONS

130. In this location, industrial and business activities are complementary to, and supportive of, Frankton and Queenstown Airport while also being well-positioned to serve the district via an excellent transport network. Frankton's role in providing for small businesses in an accessible location was made clear in Mr Heath's evidence on commercial land requirements. Policy 3.2.1.3 as recommended provides that *'the Frankton urban area functions as a commercial and industrial service centre, and provides community facilities, for the people of the Wakatipu Basin.'* In our view, industrial zoning in Glenda Drive is consistent with this outcome given the strategic planning role of Frankton Flats and Remarkables Park.
131. BMU zoning provides for complementary commercial, business, retail and residential uses that supplement the activities and services provided by town centres. Higher density living opportunities close to employment and recreational activities are also enabled. Significantly greater building heights are enabled in the Business Mixed Use Zone in Queenstown, provided that high quality urban design outcomes are achieved. While BMUZ is not an available option due to lack of scope and defects in the submission, we record that BMUZ is not appropriate in this location because Glenda Drive lacks proximity to an existing town centre. BMUZ would also enable more intensive development that would displace industrial activities while increasing the likelihood of ASAN being established. Given that the area is demonstrably urban, we are not sure that height is a significant issue, but again, that should be part of a comprehensive review of the zoning applicable to Glenda Drive.
132. The notified Rural zoning of both properties is also inappropriate because it does not recognise their existing use and development. These sites are not capable of being developed in accordance with the purpose and provisions of the Rural Zone nor would this be an efficient use of this land. In our view, Rural zoning is anomalous in the circumstances.
133. With respect to QAC's further submission opposing rezoning that would enable ASANs or intensification, retention of Rural zoning satisfies this concern in the interim.

134. For the reasons set out above, we find an industrial zoning in Glenda Drive (setting aside these two sites) would implement the Strategic Direction of the PDP and would therefore be the most appropriate zone for this area. However, no scope is provided in the submission to rezone the rural land to industrial, and we have no evidence setting out appropriate provisions.
135. Accordingly, we conclude that the Council should consider applying an industrial zone to these sites either by variation or as part of the review of industrial zones in a later stage.

17. RECOMMENDATION

136. For the reasons set out above, we recommend that:
- a. Submissions 488.1 and 488.3 be rejected; and
 - b. FS1340 be accepted; and
 - c. Rural zoning be retained; and
 - d. The Council consider applying an industrial zone to the submission sites by way of variation or when it reviews the industrial zones in a later stage.

PART F: FLETCHER DISTRIBUTION LTD AND MICO NEW ZEALAND LIMITED; REAVERS NZ LIMITED

Submitter Fletcher Distribution Ltd and Mico New Zealand Limited (Submission 344), Reavers NZ Limited (Submission 720)

Further Submissions

FS1077.60 - Board of Airline Representatives of New Zealand (BARNZ) – oppose 720

18. PRELIMINARY MATTERS

Subject of Submissions

137. These submissions related to the Frankton Placemakers site and the adjoining strip of stopped road as shown on Figures 6-7 and 6-8.

Outline of Relief Sought

138. The submitters sought that areas of land occupied by industrial uses and zoned Rural be rezoned industrial. Reavers also sought industrial zoning for a strip of stopped road located between their properties and SH6.

Description of the Site and Environs

139. Glenda Drive is an industrial area which has developed rapidly in recent years in conjunction with Frankton Flats. The site is located on a busy intersection with SH6 and is used as a carpark serving Frankton Placemakers. The Placemakers building itself is on land zoned Industrial A and therefore was not part of Stage 1 of the PDP.

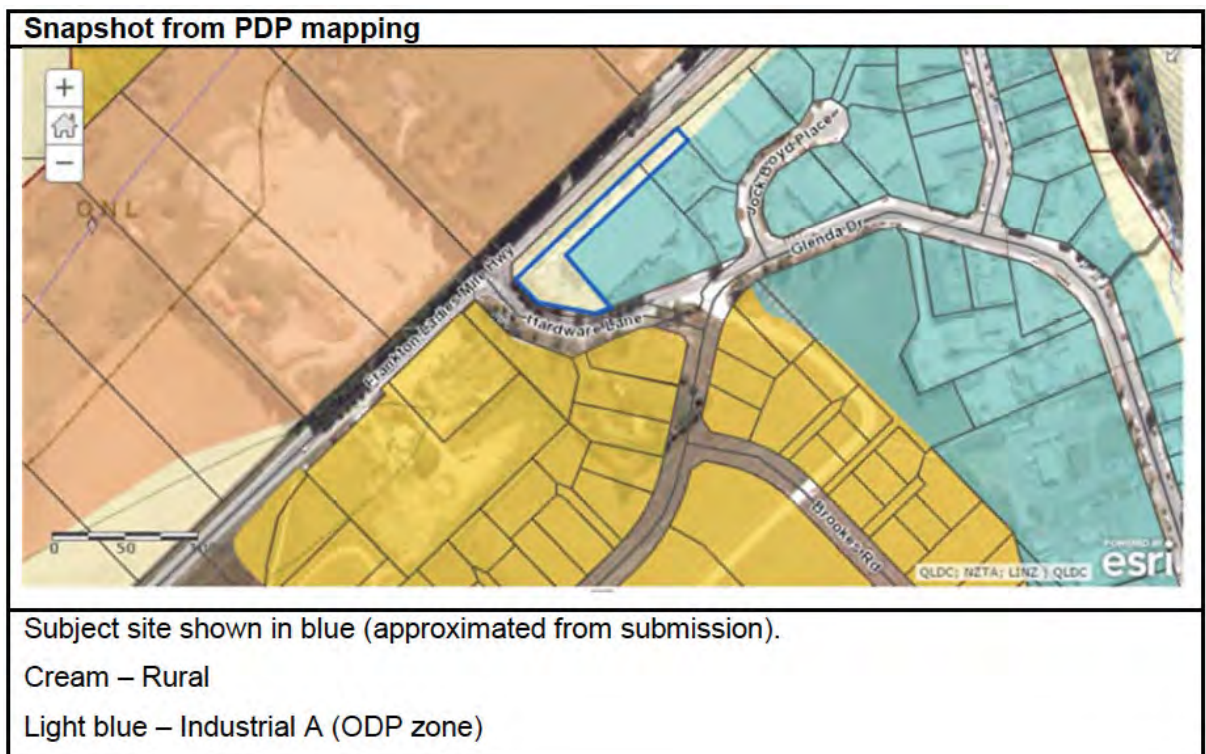

Figure 6-7 – Zoning of the land subject to Submission 344.12 outlined in blue

Snapshot from PDP mapping

Subject site shown in blue (approximated from submission).

Cream – Rural

Light blue – Industrial A (ODP zone)

Figure 6-8 Zoning of the land subject to Submission 720 outlined in blue

18.1. The Case for Rezoning

140. The basis of the submissions was that the subject sites were occupied by Placemakers (e.g., carpark) and other businesses therefore the area zoned Rural was not capable of being used for that purpose. Split zoning was an anomaly in the circumstances and should be tidied up to reflect long established uses. The adjoining area of stopped road should also be zoned Industrial. The submitters did not attend the hearing and did not provide evidence. Both submitters identified that scope is an issue because Industrial A zoning is not part of Stage 1 of the PDP.
141. BARNZ sought retention of the Rural Zone to the extent that any of the land falls within the Queenstown Airport OCB. Planning Map 31a shows that this land is not within the OCB therefore we do not need to consider this matter any further.
142. The Council's witnesses did not oppose the rezoning in principle. Dr Read outlined the background to Rural zoning in this area i.e., it predates Frankton Flats Special Zone. In her opinion, the visual effects of rezoning the subject land to Industrial A would be acceptable.²⁶
143. Ms Evans considered that the current land use, location within an industrial area and general lack of rural attributes would not achieve consistency with the purpose of the Rural Zone. In her opinion, Industrial A zoning would be more appropriate or the areas identified in the submissions, however the industrial provisions had not been reviewed in Stage 1 of the PPD.²⁷
144. The Stage 2 Variations propose to rezone a strip of closed road lying between these sites and SH6 as Informal Recreation.

²⁶ Dr M Read, EIC, 24 May 2017, paragraphs 6.4 – 6.8

²⁷ R Evans, Section 42A Report, 24 May 2017, paragraphs 7.17 & 7.18

18.2. Discussion of Planning Framework

145. The Zone Purpose for the Rural Zone is to enable farming activities and provide for appropriate other activities that rely on rural resources while protecting, maintaining and enhancing landscape values, ecosystem services, nature conservation values, the soil and water resource and rural amenity.
146. While it was open to the submitters to seek Industrial A zoning for this land²⁸, any such submission would need to be supported by evidence that the desired zoning fitted into the structure of the PDP and gave effect to the objectives and policies of the Strategic Direction and Urban Development chapters.

19. ISSUES

- a. The most appropriate zone for the submitters' properties and the adjoining stopped road.
- b. Inclusion of ODP zone into PDP.

20. DISCUSSION OF ISSUES AND CONCLUSIONS

147. We agree with the submitters and the Council that it is necessary to change the zoning of the submission sites (except for the strip of stopped road subject to the Stage 2 Variations) to an industrial zone because the Rural zone does not reflect the existing uses of the land nor set an appropriate planning framework for the future.
148. Industrial A zoning would be consistent with the existing zoning in Glenda Drive, however we had no evidence on whether the Industrial A Zone sought was compatible with the structure of the PDP, nor evidence of the actual text and provisions to be included. The ODP was drafted with an effects-based management regime, while the PDP uses a different activity-list approach. For these reasons, we do not consider it possible to simply transfer the Industrial A zone into the PDP without an appropriate analysis of the provisions to ensure compatibility, as noted in the Minute referred to above.
149. The Stage 2 Variations address the zoning of the strip of stopped road lying adjacent to SH6 however rezoning the stopped part of Glenda Drive must await a later stage of the Plan review.

21. RECOMMENDATION

150. For the reasons set out above, we recommend that:
- a. Submissions 344 and 720 be rejected; and
 - b. FS1077 be accepted; and
 - c. Rural zoning be retained; and
 - d. The Council consider applying an industrial zone to the submission sites by way of variation or when it reviews the industrial zones in a later stage.

FS1164.4 – Shotover Park Limited – support

FS1340.102 – Queenstown Airport Corporation - support

22. PRELIMINARY MATTERS

22.1. Subject of Submissions

151. These submissions related to three lots on the western side of Glenda Drive at its southern end on the corner of Hawthorne Drive, Frankton, as shown on Figure 6-9.

22.2. Outline of Relief Sought

152. The submission requested rezoning from Rural to Industrial A.

153. In fact, the properties were notified as being within the Airport Mixed Use Zone (subsequently renamed as the Airport Zone) on Planning Map 31a.²⁹

22.3. Description of the Site and Environs

154. These properties are adjacent to the Glenda Drive industrial area and in close proximity to Frankton Flats Special Zone and Queenstown Airport.

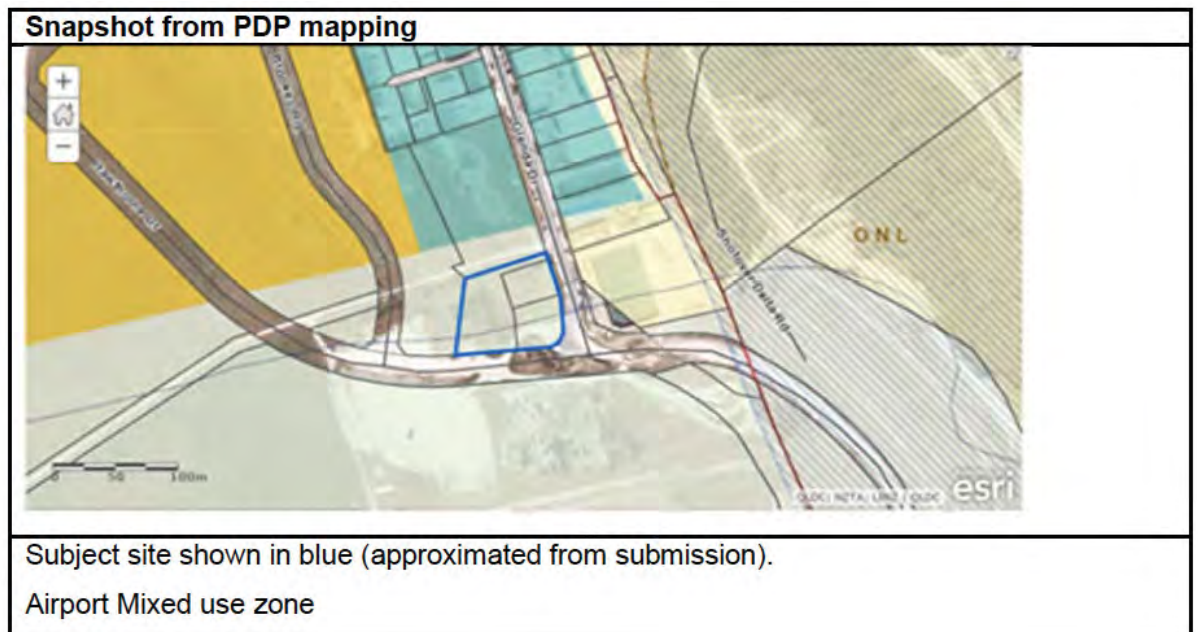

Figure 6-9 – Zoning of land subject to the submission outlined in blue

22.4. The Case for Rezoning

155. The basis of the submission was that the properties are an isolated pocket of Rural zoning that has little to no Rural character left due to industrial development in Glenda Drive. We note this is not relevant given the AMUZ is applicable. The submitter did not attend the hearing and did not provide evidence.

²⁹ R Evans, Section 42A Report Group 1A, 24 May 2017, paragraph 7.29

156. The Council's evidence established that the correct zoning was Airport Mixed Use. Ms Evans considered that an industrial zoning was the most appropriate for these lots given their location at the end of Glenda Drive industrial area and the lack of rural character attributed to the site and surrounds. In her opinion, implementation of an Industrial A zoning needed to be by way of variation during a future stage of the review.³⁰

22.5. Discussion of Planning Framework

157. This land was notified in the Airport Mixed Use Zone (recommended to be renamed as Airport Zone). A small area is within the ANB and the remainder is within the OCB for Queenstown Airport. This land is not included in Designation #2 relating to the Airport.³¹

158. The extent of the Airport Zone was considered by the Stream 8 Hearing Panel and a subsequent Joint Memorandum of Counsel³² requested that the Panel make its recommendation based on the evidence received in December 2016 (by the Stream 8 Panel).

159. On the basis of the evidence heard on this matter in December 2016, the Stream 8 Hearing Panel has recommended to this Panel that the Airport Zone in Queenstown only apply to the land zoned Airport Mixed Use in the ODP and a small extension over a carpark on the western side of the airport. That Panel has considered the zoning of this land north of the airport and concluded that no alternative zone consistent with the adjacent development was available, and in the circumstances, reversion to the Rural Zone until the Council undertook a review of the industrial zones was the only logical solution. That Panel noted that if the Council were to withdraw this land from the PDP, it would remain zoned Rural General in the ODP. This recommended outcome therefore is that there be no substantive change from the operative zoning.

160. While it was open to the submitters to seek Industrial A zoning for this land³³, any such submission would need to be supported by evidence that the desired zoning fitted into the structure of the PDP and gave effect to the objectives and policies of the Strategic Directions chapters.

23. ISSUES

- a. The most appropriate zone for the submitter's properties
- b. Inclusion of ODP zone into PDP.

24. DISCUSSION OF ISSUES AND CONCLUSIONS

161. We heard no evidence that would lead us to come to a different conclusion to that reached by the Stream 8 Hearing Panel. While an industrial zoning would probably be the most appropriate zoning for this land given its location between the airport and industrial land, we had no evidence on whether the Industrial A Zone sought was compatible with the structure of the PDP, nor evidence of the actual text and provisions to be included. The ODP was drafted

³⁰ *ibid*, para 7.30

³¹ R Holden, Section 42A Report, 23 September 2016, paragraph 6.14

³² Memorandum of Counsel for Remarkables Park Limited, Queenstown Airport Corporation and the Queenstown Lakes District Council, dated 19 May 2017

³³ Minute Concerning Submissions Seeking Rezoning to an ODP Zone, dated 29 May 2017, paragraphs 3-6

with an effects-based management regime, while the PDP uses a different activity-list approach. For these reasons, we do not consider it possible to simply transfer the Industrial A zone into the PDP without an appropriate analysis of the provisions to ensure compatibility, as noted in the Minute referred to above.

25. RECOMMENDATION

162. For those reasons we recommend that:

- a. Submission 418.1 and FS1117, FS1164 and FS1340 be rejected; and
- b. That Rural zoning be used as an interim zoning until the Council notifies industrial zone provisions which may be appropriate for this land. We also note that if the Council were to withdraw the PDP from this land (which is an option available to it), the land would remain zoned Rural General in the ODP.

PART H: IAN & DOROTHY WILLIAMSON

Further Submissions

None

26. PRELIMINARY MATTERS

26.1. Subject of Submissions

163. These submitters live at 971 Frankton Road and were concerned about the Frankton area.

26.2. Outline of Relief Sought

164. The submission sought that the LDRZ be retained for an undefined area of Frankton. We have assumed that the residential area between McBride Street and the Frankton Marina is the area of concern given the grounds of the submission.

26.3. Description of the Site and Environs

165. Frankton in the vicinity of the submitters' property is a residential area located in close proximity to Terrace Junction shopping centre (see Figure 6-10).

Figure 6-10 - Aerial photograph showing the submitter's property at 971 Frankton Road outlined in turquoise

26.4. The Case for Rezoning

166. The submitters were concerned about the traffic effects of intensification. The submission described the difficulties of exiting the properties on this side of SH6A due to the high traffic

volumes and 70 km/hr speed limit. The driveways were also steep with stopping room for none or one car only which made them suitable for single dwellings not multiple dwellings.

167. The Council's witnesses supported the notified LDRZ. Ms Kim Banks said that this is the location which was proposed as MDRZ during the consultation phase of the PDP, and was subsequently not pursued by Council.³⁴

27. ISSUES

- a. The most appropriate zone for this part of Frankton

28. DISCUSSION OF ISSUES AND CONCLUSIONS

168. We agree with the submitters and the Council's witnesses that LDRZ as notified is the most appropriate zone for the area of Frankton located between McBride Street and Frankton Marina. In particular, we agree with the submitters that low density residential development is more suitable given the topography of this land and the difficulties of providing safe access and egress to and from properties on this busy road.

29. RECOMMENDATION

169. For those reasons we recommend that:
- a. Submission 140 be accepted; and
 - b. LDR zoning be retained on the southern side of SH6A between McBride Street and Frankton Marina as notified.

³⁴ K Banks, Section 42A Report, 25 May 2017 paragraph 16.2

30. PRELIMINARY MATTERS

30.1. Subject of Submissions

170. These submissions related to 17 Stewart Street, Frankton.

30.2. Outline of Relief Sought

171. The submitters sought to retain medium density zoning over 17 Stewart St, Frankton (see Figure 6-11).

Figure 6-11 - Aerial photograph of the land subject to the submission outlined in turquoise

31. ISSUES

- a. The most appropriate zone for this land

32. DISCUSSION OF ISSUES AND CONCLUSIONS

172. First, we confirm that this property was zoned LDR in the PDP as notified. The submitters' request to retain MDRZ was in error. The submitters did not appear at the hearing or provide evidence.

173. Ms Kim Banks for the Council said that

"...the area of Stewart Street was during the consultation phase of the PDP, considered for rezoning to MDRZ. However this was subsequently not pursued and therefore the

notified zoning of 17 Stewart Street is LDRZ, and not MDRZ as the submitter has assumed.”³⁵

174. We observe that several submissions were based on misunderstandings of one kind or another arising from the consultation phase of PDP preparation.
175. Having said that, we consider LDRZ is the most appropriate zone for this site primarily because this area is within the OCB for Queenstown Airport and limiting development within the OCB accords with the Plan’s strategic direction.

33. RECOMMENDATION

176. For the reasons set out above, we recommend that:
 - a. Submissions 586 and 775 be rejected; and
 - b. LDR zoning be retained over 17 Stewart Street, Frankton.

34. PRELIMINARY MATTERS

34.1. Subject of Submissions

177. These submissions related to an area of residential and commercial land at Frankton.

34.2. Outline of Relief Sought

178. Submission 238 sought that a substantial area of land be rezoned from LDRZ as notified to MDRZ. By contrast, the remaining submitters supported LDR zoning for their properties which lie within the area identified by Submission 238.

34.3. Description of the Site and Environs

179. The submissions related to more or less all the land bounded by SH6A from Frankton Marina to Terrace Junction shopping centre and SH6 from Terrace Junction to Robertson Street and Lake Wakatipu within the notified LDRZ as shown on Figure 6-12.

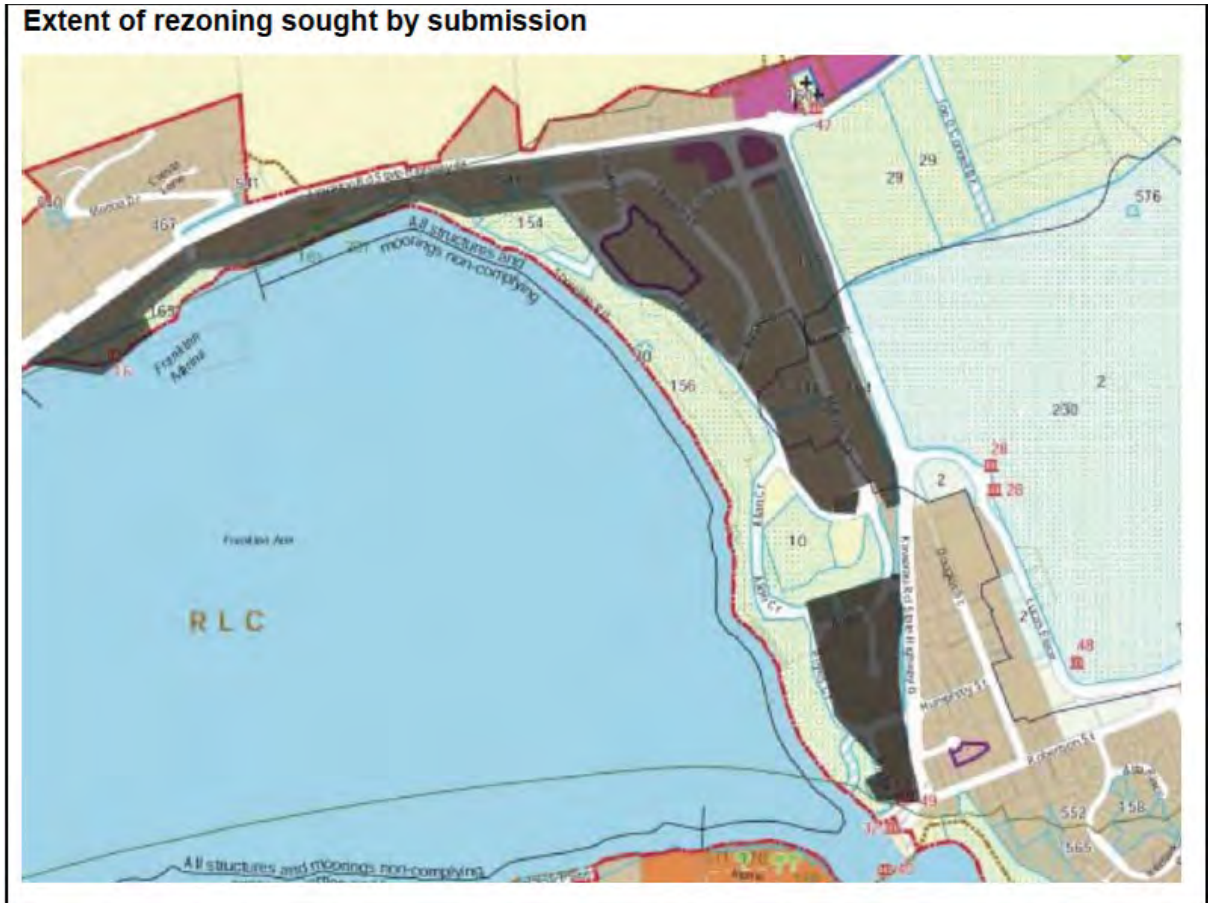

Figure 6-12 – Map of the land subject to the submission shaded in black

34.4. The Case for Rezoning

180. Submission 238 supported the purpose of the MDRZ which was to enable a greater supply of diverse housing options for the District (subject to additions). It also stated that the land between SH6 and Lake Wakatipu at Frankton met the criteria of the MDRZ. We note for completeness that the submission included the LSCZ at Terrace Junction within the area proposed for rezoning and that we have assumed this to be in error. The submitter did not attend the hearing and did not provide evidence.

181. For the Council, Ms Kim Banks addressed the proposed rezoning comprehensively in terms of the provision of infrastructure services, traffic effects, location within the OCB of Queenstown Airport (if applicable), existing non-residential uses in Sugar Lane (near the Frankton Marina) and the intensity of development enabled by the two zones. In her opinion, the LDRZ was the most appropriate zone overall and she noted in particular that there would be little practical benefit in applying the MDRZ at Frankton Marina versus the current LDRZ.³⁶ The Council's evidence was not challenged therefore we accept and rely on it.

34.5. Discussion of Planning Framework

182. The LDRZ is the largest residential zone in the District. In Chapter 7, as recommended, it is renamed the Lower Density Suburban Residential zone to more accurately capture the range of traditional and modern suburban densities and housing types enabled. Objective 7.2.1 provides for *'a mix of compatible suburban densities and a high amenity low density residential environment for residents...'*. Policy 7.2.1.2 encourages development that *'maintains suburban*

³⁶ K Banks, Section 42A Report Group 1B, 25 May 2017, paragraphs 18.2 – 18.20

residential amenity values including predominantly detached building forms, and predominantly one or two storey building heights. Policy 7.2.1.3 seeks to maintain amenity values between sites, in particular privacy and access to sunlight. A clear theme is the maintenance of suburban character and high amenity values. Commercial activities are generally discouraged.

183. The purpose of the MDRZ is to enable a greater supply of diverse housing options for the District at a higher density than the LDRZ. Development controls are designed to ensure that the reasonable maintenance of amenity values is maintained. MDR zones should be easily accessible to local shopping centres, town centres or schools by public transport, cycling or walking.

184. This land is located within the OCB for Queenstown Airport.

35. ISSUES

- a. The most appropriate zone for this land

36. DISCUSSION OF ISSUES AND CONCLUSIONS

185. We agree with the Council's planner, Ms Banks, that LDR is the most appropriate zone for this land for the reasons set out in the Section 42A Report. In our view, there were three key matters supporting retention of the LDRZ in this area which we discuss in the following paragraphs.

186. With respect to traffic effects, we accept the opinion of Ms Wendy Banks that intensification of all the streets in Frankton to MDRZ would place significant pressure on the existing transport network. For the Frankton Marina, there are safety concerns associated with right turns to the state highway which were described in some detail during the hearing on the zoning of Sugar Lane.³⁷

187. Much of the area proposed for rezoning is located within the OCB for Queenstown Airport affected by airport noise with the potential for reverse sensitivity effects on the airport. In our opinion, including this land within the MDRZ would be contrary to the Strategic Direction and Urban Development objectives and policies relating to infrastructure and urban development.³⁸

188. Finally, we have recommended elsewhere that the Council consider undertaking a planning study of the Frankton Marina/Sugar Lane area, including the Z Energy site, to identify its optimal future development with a view to introducing a variation to a form of zoning (or other method) that achieves the community's desired outcomes.³⁹ Accordingly, we consider that the LDRZ as notified should remain until this study is complete because changing the zoning to MDRZ at this stage would be pre-emptive.

³⁷ Recommendation Report 17-6

³⁸ Strategic Objectives 3.2.1.3, 3.2.1.9 and 3.2 and Policy 3.3.5; Urban Development Objective 4.2.2A and Policy 4.2.2.1

37. RECOMMENDATION

189. For the reasons set out above, we recommend that:
- a. Submission 238 be rejected; and
 - b. FS1107.47, FS1226.47, FS1234.47, FS1239.47, FS1241.47, FS1242.70, FS1248.47, FS1249.47 and FS1340.68 be accepted; and
 - c. Submissions 35, 36, 43, 85, 24 and 55 be accepted; and
 - d. LDR and LSC zoning be retained in Frankton as notified.

PART K: RUSSELL MARSH

Submitter Russell Marsh (Submission 128)

Further Submissions

FS1077.8 - Board of Airline Representatives of New Zealand - oppose
FS1340.60 - Queenstown Airport Corporation - oppose

38. PRELIMINARY MATTERS

38.1. Subject of Submissions

190. These submissions related to the Frankton residential area.

38.2. Outline of Relief Sought

191. The submitter sought the following relief:

- a. Amend the plan to reinstate the original Frankton – Proposed Medium Density Zoning – per the MACTODD report; or
- b. Amend the plan to include Stewart Street, Lake Avenue, Birse Street, McBride Street into MDR zoning as opposed to LDR; or
- c. Amend the plan to include Frankton district streets into MDR that are currently outside the Air Noise Boundary (ANB) – per the Queenstown Airport website

38.3. Description of the Site and Environs

192. The streets identified in (b) above are located between SH6 and Lake Wakatipu at Frankton as shown in Figure 6-13.

Figure 6-13 – Approximate extent of Lake Avenue/Stewart St/McBride St/Birse Street area subject to the submission

38.4. Discussion of Planning Framework

193. The LDRZ is the largest residential zone in the District. In Chapter 7, as recommended, it is renamed the Lower Density Suburban Residential zone to more accurately capture the range of traditional and modern suburban densities and housing types enabled. Objective 7.2.1

provides for 'a mix of compatible suburban densities and a high amenity low density residential environment for residents...'. Policy 7.2.1.2 encourages development that 'maintains suburban residential amenity values including predominantly detached building forms, and predominantly one or two storey building heights.' Policy 7.2.1.3 seeks to maintain amenity values between sites, in particular privacy and access to sunlight. A clear theme is the maintenance of suburban character and high amenity values. Commercial activities are generally discouraged.

194. The purpose of the MDRZ is to enable a greater supply of diverse housing options for the District at a higher density than the LDRZ. Development controls are designed to ensure that the reasonable maintenance of amenity values is maintained. MDR zones should be easily accessible to local shopping centres, town centres or schools by public transport, cycling or walking.

195. The streets identified in the submission are located within the ANB or OCB for Queenstown Airport.

38.5. The Case for Rezoning

196. The submitter stated that the Frankton area appeared to fit the strategy of building residential accommodation that helps protect the QLD environment and is in an area well-supported by public transport and amenities. With the apparent population growth forecast for the QLD and the limited residential sites available, the Frankton area should be considered as an option for MDR rather than LDR. The submitter did not attend the hearing and no evidence was provided.

197. The QAC opposed the proposed rezoning of this land and submitted that it is counter to the land use management regime established under PC35. BARNZ said that Queenstown Airport is a piece of regionally significant infrastructure which requires strong protection in the District Plan from reverse sensitivity effects which would result from inappropriately located development.

198. For the Council, Ms Banks opposed the relief sought in a) and b) above for the same reasons that she opposed the relief sought in Submission 238. Two issues were particularly relevant. First, much of the land is located within the OCB and rezoning to MDR would be contrary to the Strategic Direction of the PDP. Second, she relied on the evidence of Ms Wendy Banks that intensification in Frankton would place significant pressure on the existing transport network including increases to onstreet parking to what are already severely constrained networks.⁴⁰

199. Ms Kim Banks specifically considered the proposal to rezone a reduced scale of MDR zoning in and around Stewart Street. She held to her view that LDRZ was the most appropriate zone for the reasons given above, even for this limited area. Ms Banks noted that the LDRZ under the PDP provides greater opportunities for intensification and redevelopment of land within the LDR compared to the ODP. In her opinion, the current LDRZ provides sufficient opportunity for limited intensification of this defined area in Frankton.⁴¹

39. ISSUES

a. The most appropriate zone for the Frankton residential area

⁴⁰ K Banks, Section 42A Report group 1B, 25 May 2017, paragraphs 20.5 – 20.7

⁴¹ Ibid, para 20.8

40. DISCUSSION OF ISSUES AND CONCLUSIONS

200. We acknowledge the submitter's point that this area suits MDR zoning because it meets the criteria of the Plan. It is easily accessible to local shopping centres, town centres or schools by public transport, cycling or walking.
201. However much of the area proposed for rezoning is located within the OCB for Queenstown Airport. We agree with BARNZ that Queenstown Airport is a significant piece of regional infrastructure requiring protection from reverse sensitivity effects. Further, airport noise reduces residential amenity values particularly the ability to use outdoor areas therefore low density zoning is to be preferred. In our opinion, including a large area of Frankton within the MDRZ would be contrary to the Strategic Direction and Urban Development objectives and policies relating to infrastructure and urban development.⁴²
202. Given the strategic importance of the airport and the adverse traffic effects of intensification in this location, we consider that LDR is the most appropriate zone for this area for the reasons set out in the Section 42A Report.

41. RECOMMENDATION

203. For the reasons set out above, we recommend that:
- a. Submission 128 be rejected; and
 - b. FS1077.8 and FS1340.60 be accepted; and
 - c. LDR zoning be retained as notified in the Frankton area.

⁴² Strategic Objectives 3.2.1.3, 3.2.1.9 and 3.2 and Policy 3.3.5; Urban Development Objective 4.2.2A and Policy 4.2.2.1

PART L: BARBARA WILLIAMS

Submitter Barbara Williams (Submission 141)

Further Submissions

FS1340.62 - Queenstown Airport Corporation – supported in part/opposed in part
The further submitter supported in part the rezoning of this site to a commercial type zoning provided it did not result in the intensification of ASAN in this area.

42. PRELIMINARY MATTERS

42.1. Subject of Submissions

204. This submission related to the zoning of land in McBride Street, Frankton.

42.2. Outline of Relief Sought

205. The submission sought that:

- a. Planning Map 33 be supported as it related to the submitter's property at 59 McBride St/ 1 Ross Street;
- b. As an alternative to the LDR zone, properties located at 58 – 106 McBride Street be rezoned to a form of commercial zoning

42.3. Description of the Site and Environs

206. The submission concerned an area of land zoned LDR located in close proximity to Frankton Junction, the bus station and SH6 as shown in Figure 6-14. Part of the block is located within the ANB and the rest is within the OCB. These are noise contours that define the area within which land use controls apply to avoid or mitigate the effects of aircraft noise from Queenstown Airport (see PC 35). This block includes the submitter's property at 58 McBride St / 1 Ross Street which has an area in excess of 900m².

Figure 6-14 – The submitter's property at 59 McBride Street and the general area affected by the submission i.e., 58 – 106 McBride Street, Frankton, outlined in blue

42.4. The Case for Rezoning

207. The submission said that some form of light commercial zoning was justified on the basis that the existing residential amenity of the residents of these properties was adversely affected by noise generated from aircraft using Queenstown Airport. According to the submitter, this would only get worse as the airport expanded its operations. Despite acoustic insulation, residents want to use and enjoy their properties and that includes outside use. Commercial tenants 'would likely be less affected than residential tenants from aircraft noise'.
208. No evidence was presented by the submitter in support of rezoning.

42.5. Discussion of Planning Framework

209. The land is zoned LDR in the PDP and is within the ASAN or OCB.
210. The Zone Purpose for the LDR zone, the largest zone in the District, states that it provides for both traditional and modern suburban densities and housing. Promotion of a high amenity low density residential environment is an objective. A further objective limits development within the ANB/OCB to discourage creation of new sites or infill development and require sound insulation and mechanical ventilation as necessary.
211. The LSC and BMU zones are the most likely options for commercial zoning in this neighbourhood. The LSCZ enables small scale commercial and business activities in discrete pockets of land that are accessible to residential areas and people in transit. The zone seeks to reduce the necessity for people to travel longer distances to town centres to purchase convenience goods and access services. Due to the nature of the Zone's locations in predominantly residential environments, standards limit the potential adverse effects on residential amenity and discourage the establishment of inappropriate activities. Visitor accommodation and residential activities are provided for in the Zone, adding to the vibrancy and viability of the Zone, whilst contributing to the diversity of housing options enabled by the District Plan.
212. The intention of the BMUZ is to provide for complementary commercial, business, retail and residential uses that supplement the activities and services provided by town centres. Higher density living opportunities close to employment and recreational activities are also enabled. Significantly greater building heights are enabled in the Business Mixed Use Zone in Queenstown, provided that high quality urban design outcomes are achieved. There are two areas of BMUZ in the PDP; Anderson Heights, Wanaka, and Gorge Road, Queenstown.
213. This block of land is primarily located within the ANB for Queenstown Airport however a small area is within the OCB.

43. ISSUES

- a. The most appropriate zone in this neighbourhood;
- b. Avoiding intensification of ASAN in this area
- c. Traffic

44. DISCUSSION OF ISSUES AND CONCLUSIONS

214. Before turning to consideration of the most appropriate zoning for this area, we note that the Council's traffic expert, Ms Wendy Banks, opposed rezoning from a traffic perspective. Her uncontested evidence was that taking into consideration the existing traffic and parking issues in and around Frankton Junction, rezoning to allow commercial activities would likely have a negative effect on the road network.⁴³
215. With respect to locating additional ASAN in this area, we accept the uncontested evidence of Ms Ruth Evans for the Council, who stated that *'either LSCZ or BMUZ could result in intensification of ASAN, as both zones provide for residential and visitor accommodation'*.⁴⁴ This outcome would be contrary to recommended Urban Development Objective 4.2.2B and in particular, Policy 4.2.2.2 which sets out the matters to have regard to when allocating zones within the UGB, including *'the need to make provision for the location and efficient operation of regionally significant infrastructure'*. LDR zoning minimises the number of dwellings within the ANB and limits the creation of new sites and infill development thus limiting the total number of dwellings exposed to aircraft noise.
216. We acknowledge that the LDRZ is intended to promote a high amenity low density residential environment and that high amenity values may not be achievable in the Frankton area due to exposure to aircraft noise. Acoustic insulation and mechanical ventilation deals with noise experienced inside buildings however the adverse effects of aircraft noise on outdoor activities cannot be avoided or mitigated within the ANB therefore the best planning strategy is to avoid any increase in the number of dwellings.
217. Mr Heath's evidence on commercial land capacity was also uncontested. He considered that there was sufficient commercially zoned land to meet current and likely future demand within the area presently zoned commercial. Specifically, he did not support *'office activity in this location, as there is plenty of capacity for offices in the LSCZ at 1 Hansen Road and also within the recommended Frankton North BMUZ'*.⁴⁵ In addition, Ms Evans said that rezoning to LSCZ would result in a large area of LSCZ that would not meet the purpose of this zone, which is to enable small scale business activities in pockets of land that are near residential areas and people in transit.⁴⁶ We accept this evidence and accordingly find that commercial rezoning of these properties in McBride Street would not achieve the Strategic Direction and Urban Development objectives and policies of the PDP.

45. RECOMMENDATION

218. For the reasons set out above, we recommend that:
- a. Submission 141.3 be rejected; and
 - b. FS1340.62 be accepted in part; and
 - c. LDR zoning be confirmed for the properties at 58 – 106 McBride Street, Frankton.

⁴³ W. Banks, EIC, 25 May 2017, paragraph

⁴⁴ R. Evans, Section 42A Report, 24 May 2017, paragraph 5.15

⁴⁵ R. Evans, Reply Evidence, paragraph 3.2 citing Mr Heath's advice relating to requests for provision of offices in McBride Street. Note that this Panel does not recommend additional BMUZ at Frankton North.

⁴⁶ R. Evans, Section 42A Report, 24 May 2017, paragraph 5.10

PART M: BRETT GIDDENS AND C & S HANSEN

Submitter **Brett Giddens (Submission 828) and C & S Hansen (Submission 840)**

Further Submissions

FS 1077.2 - Board of Airline Representatives of New Zealand (BARNZ) – opposed Submission 828

FS1340.153 - Queenstown Airport Corporation – re Submission 828

Opposed in part/supported in part. QAC remained neutral with respect to the zoning of this area as LSCZ provided it did not result in the intensification of ASAN in this area.

FS 1340.59, FS 1340.69 - Queenstown Airport Corporation - re Submission 840

Opposed in part/supported in part. QAC remained neutral with respect to the zoning of this area as LSCZ provided it did not result in the intensification of ASAN in this area.

46. PRELIMINARY MATTERS

46.1. Subject of Submissions

219. These submissions related to the land bound by McBride Street, Burse Street, Grey Street and State Highway 6, Frankton.

46.2. Outline of Relief Sought

220. Brett Giddens originally sought rezoning from LDRZ to LSCZ or as a secondary option a more appropriate higher density zone such as HDRZ or MDRZ or another zone or amended zone that would achieve their desired outcomes.

221. C & S Hansen sought rezoning from LDRZ to LSCZ for the same block of land.

222. At the hearing, counsel for C & S Hansen and Brett Giddens advised that the relief had been amended. The extent of the rezoning from LDRZ to LSCZ sought would now be confined to land located at 16, 18, 18B and 20 McBride Street.⁴⁷ Accordingly, we have addressed the submissions in terms of this amended scope.⁴⁸

46.3. Description of the Site and Environs

223. McBride Street intersects with SH6A at Frankton Junction, a local shopping centre located at a busy roundabout. It runs in a southerly direction parallel to SH6/Kawerau Road through an area of suburban housing until it meets the lakefront. Queenstown Airport is in close proximity.

224. The subject sites are bounded to the west or lakeside by McBride Street, to the east by the Frankton Bus Terminal, to the north by the QLDC unformed parking area (located within the LSCZ) and to the south by a residential property, 22 McBride Street.

225. Current land uses are:

- a. 16 McBride Street Dental surgery and commercial activities, consented 2004
- b. 18 McBride Street office activity, consented 2006 and varied 2009

⁴⁷ Legal Submissions for Christopher & Suzanne Hansen (840) and Brett Giddens (828), paragraph 1

⁴⁸ K Banks assessed the submission request for HDRZ or MDRZ in her Section 42A Report Group 1B and recommended these zones be rejected. The submitters did not pursue this aspect of their relief at the hearing therefore we have not addressed this issue here.

- c. 18 McBride Street current use is residential with consent granted for office activity in 2017⁴⁹
- d. 20 McBride Street current use is residential however we understand that an application for office activity was pending at the time of the hearing⁵⁰

226. The area is shown on Figure 6-15 below.

Figure 6-15 - Aerial photograph of the land subject to the submissions outlined in blue

46.4. The Case for Rezoning

227. When considering the most appropriate zoning, C & S Hansen stated that the Council had failed to take into account:

the changing nature of landuse along the eastern side of McBride Street, the location near Queenstown's most active bus terminal and the State Highway, and the existing commercial uses which operate under approved resource consents. Given the change in landuse coupled with the presence of an expanding road network the level of residential amenity has been significantly diminished while the QLDC continue to approve resource consents authorising the commercial creep further compromising the integrity of the low density residential zone.⁵¹

228. Brett Giddens made the same points in support of his position that LDR zoning is inappropriate. His submission also stated that LSCZ would:

reflect some of the current land uses, provide the opportunity for commensurate growth, enable activities to be undertaken that would complement the surrounding residential area while not detracting from the town centres, introduce activities that are not directly sensitive to airport operations, while being an appropriate location for commercial activity such that effects to the wider area would be minimal.⁵²

⁴⁹ Ibid, para 2; N. Geddes, EIC, 4 June 2017, paragraphs 3.5 – 3.7

⁵⁰ Legal Submissions for Christopher & Suzanne Hansen (840) and Brett Giddens (828), paragraph 2

⁵¹ Submission 840, paragraph 3.1

⁵² Submission 828, paragraph 12

229. Mr Giddens and Mr Hansen described similar experiences as residents/landowners. They both observed that the residential amenity of McBride Street had deteriorated in recent years albeit they acknowledged that recent traffic improvements had been beneficial for the area.
230. Evidence for the submitters discussed traffic and planning matters. The submitters' traffic engineer, Mr Jason Bartlett, described congestion in McBride Street as a result of traffic diverting or shortcutting to avoid SH6/Kawerau Road which was severely congested due to the roundabout at the SH6/SH6A junction. There were road humps on McBride Street to restrict access, traffic speeds and efficiency.⁵³
231. Mr Bartlett described several traffic improvements to relieve congestion in the general area including the new Kawerau Falls bridge, changes to the SH6/SH6a roundabout and provision of an alternative route to the airport via Hawthorne Drive. These changes are expected to relieve congestion on the state highway network and further reduce traffic flows in McBride Street.⁵⁴ He also said that proximity to the bus station, cycle paths and footpaths was an advantage for this location.
232. In his opinion, the proposed zone change would increase traffic generation and parking demand as a result of potential activities enabled by the zone change. However, compliance with the ODP's current planning provisions in Chapter 14 would result in acceptable traffic outcomes. He concluded:
- With these improvements I do not regard existing traffic and parking issues within the local road network as being a reason to reject these Submissions on transport grounds.*⁵⁵
233. Mr Nicholas Geddes focused on three key matters namely the supply of commercial land and whether rezoning this discrete pocket of land as LSCZ was material in terms of the NPSUDC's requirement to provide sufficient urban capacity, loss of residential amenity and recognition of existing commercial uses. He supported rezoning the properties as LSCZ and proposed amendments to the standards in Chapter 15 designed to manage the zone interface specifically for the subject sites. These provisions would require a 4.5m setback where a site adjoined a Residential zone, a road boundary setback of 4.5m and a maximum building height of 8m.⁵⁶ No analysis of the potential for ASAN to be established on the properties was provided.
234. Mr Geddes considered the costs and benefits of the BMUZ but did not recommend that option. As his clients limited their relief to seeking LSCZ on the subject sites, we have not given this option further consideration.
235. Mr John Kyle, a planning expert for Queenstown Airport Corporation, maintained that rejecting the rezoning would assist to appropriately protect airport operations from potential reverse sensitivity effects. In his opinion, this is justified because the airport is regionally significant infrastructure. Alternatively, he would support the rezoning request if it included appropriately drafted conditions that prohibit intensification of ASAN in this area at a higher rate or intensity than currently provided for in the ODP.⁵⁷

⁵³ J Bartlett, EIC, 9 June 2017, paragraph 12

⁵⁴ Ibid, paragraph 15

⁵⁵ Ibid, paragraph 31

⁵⁶ N. Geddes, Summary Statement, 14 August 2017, Attachment A

⁵⁷ J. Kyle, Rebuttal Evidence, 7 July 2017, paragraphs 2.5 – 2.7

236. The Council’s planning witnesses supported retention of the LDRZ and opposed any change of zoning, including a change to LSCZ. Ms Evans considered that intensification of ‘commercial’ activities would have a negative impact on residential amenity (building height, traffic), that there was no need to increase the area of LSCZ because there was sufficient commercial land zoned to meet projected demand for the next twenty years, an extension of the LSCZ in this location would detract from the role of Frankton Junction as a local shopping centre and LSC zoning could increase the likelihood of ASAN being established in this area contrary to notified Policy 4.2.6.1 of Chapter 4, Urban Development. This policy sought to protect the airport from the reverse sensitivity effects of ASANs.
237. Ms Kim Banks also opposed rezoning because the level of intensification provided for under the LDRZ was appropriate particularly because the area was within the OCB. This evidence related to the original request to rezone an entire block nevertheless her opinion on the effects of intensification within the OCB was still relevant.⁵⁸
238. Ms Evans also opposed the inclusion of bespoke provisions for offices in this location or in other residential zones for strategic reasons. She relied on Mr Heath’s evidence that there was plenty of capacity for office activity in this location, at 1 Hansen Road and also within the BMUZ at Frankton North recommended by the officers. In Mr Heath’s opinion, the McBride Street block did not have any unique attributes that warranted special provision for offices in the residential zone.⁵⁹
239. Ms Wendy Banks, traffic engineer, considered that LSC zoning was not appropriate because there was not enough evidence such as a transport analysis to support any change, the recent upgrades could alleviate traffic pressures in the area but were unproven and McBride Street was still a residential street.⁶⁰

46.5. Discussion of Planning Framework

240. As notified the land was zoned LDRZ in the PDP. In Chapter 7, as recommended, it is renamed the Lower Density Residential zone to more accurately capture the range of traditional and modern suburban densities and housing types enabled. Objective 7.2.1 provides for ‘*a mix of compatible suburban densities and a high amenity low density residential environment for residents...*’. Policy 7.2.1.2 encourages development that ‘*maintains suburban residential amenity values including predominantly detached building forms, and predominantly one or two storey building heights.*’ Policy 7.2.1.3 seeks to maintain amenity values between sites, in particular privacy and access to sunlight. A clear theme is the maintenance of suburban character and high amenity values.
241. Commercial activities are generally not anticipated other than those that are residential-compatible and small-scale (100m² or less gross floor area is a restricted discretionary activity), however may be accommodated where necessary to address a demonstrated local need provided residential amenity is not compromised.⁶¹ Objective 7.2.7 states that ‘*any commercial development in the zone is small scale and generates minimal amenity value impacts*’. Policy 7.2.7.1 requires that commercial activities directly serve the day to day needs of local residents provided these do not undermine residential amenity values or the viability of any nearby centre. Additional policies address traffic and parking effects, noise effects and compatibility of design, scale and appearance with the surrounding residential context. Home

⁵⁸ K. Banks, Section 42A Report Group 1B, 25 May 2017, paragraphs 19.1 – 19.11

⁵⁹ R. Evans, Reply Evidence, 6 October 2017, citing Mr Heath at paragraph 3.2

⁶⁰ W. Banks, Rebuttal Evidence, 7 July 2017, paragraphs 3.11 – 3.17

⁶¹ Recommended Chapter 7, LDRZ, Zone Purpose, final paragraph

occupations are a permitted activity. Overall, there is a clear direction enabling small-scale commercial activities to serve the local community provided these are compatible with their residential context and maintain high amenity values.

242. The subject sites are located within the Queenstown Airport OCB. Recommended Objective 7.2.2 states that development within the ANB and OCB is limited in recognition of severe amenity (noise) constraints now and also likely in the foreseeable future as a result of increasing intensity of operation and use. Policy 7.2.2.1 discourages the creation of any new sites or infill development within the ANB and between the ANB and OCB on land around Queenstown Airport. There are policies and supporting rules requiring mitigation of noise effects in buildings containing ASANs (Policies 7.2.2.2 & 7.2.2.3; Rule 7.5.4). The zoning strategy provides for LDRZ in the Frankton area because it is the most restrictive zone in terms of density of residential development therefore minimises the likelihood of ASANs being established within the ANB/OCB.
243. The LSCZ as recommended in Chapter 15 enables small scale commercial and business activities in discrete pockets of land that are accessible to residential areas and people in transit. The function of these local shopping centres is to meet the day to day needs of the community for convenient access to goods and services. These small scale centres should not undermine the role and function of town centres. One method for ensuring this outcome is to limit the gross floor area of individual retail and office activities (Policy 15.2.1.4 and Rule 15.5.10). Within the OCB, development is required to provide acoustic insulation (Rule 15.5.4).
244. We consider that LSC zoning at Frankton Junction commercial area is questionable given the purpose of that centre and its extent. Frankton Junction is more than a 'discrete pocket of land' providing for activities that meet local needs unlike the LSCZs at Fernhill and Sunshine Bay. Further, resource consent has been granted for offices on several Residentially-zoned sites adjoining the LSCZ indicating that this centre serves a different function to that anticipated by the zone. The available commercial zones are limited therefore LSCZ is the best of those options.

47. ISSUES

- a. Commercial land requirements and commercial zoning strategy
- b. Avoiding intensification of ASAN within the OCB
- c. Traffic effects
- d. Effects on residential amenity
- e. The most appropriate zone for these properties

48. DISCUSSION OF ISSUES AND CONCLUSIONS

245. Mr Geddes's bulk and location images showed the difference in development capacity between the notified LDRZ and the proposed LSCZ as amended in Appendix 4 of his Summary Evidence. Mr Giddens estimated the additional gross floor area to be 700 – 1200m². We agree with Ms Evans that the diagrams are confusing to read⁶² however they show in a general way

⁶² R. Evans, Rebuttal Evidence, 7 July 2017, paragraph 6.2

that offices and other commercial activities are feasible on the subject sites while mitigating loss of privacy and sunlight to 22 McBride Street.

246. The fundamental issue is not feasibility but whether there is any need at all to increase the supply of commercial land in Queenstown generally and in this area particularly. The commercial land requirements of the District were addressed by Mr Heath and Mr Osborne in the course of this hearing. Based on their uncontested evidence, we have concluded that there is sufficient land zoned for commercial activities in the PDP to meet the estimated demand in Wakatipu until 2038.⁶³ Thus, any party seeking rezoning from Residential to Business purposes has a difficult hurdle to overcome. It is necessary to show that rezoning a particular area of land is justifiable for other reasons.
247. The appropriateness of LSCZ for the McBride Street block was also considered by Mr Heath in his Reply evidence.⁶⁴ Allowing for LSCZ at 1 Hansen Road and for the possibility of BMUZ at Frankton North, he considered that rezoning this block of land would saturate the market. In light of the submitters' revised relief, Mr Geddes responded that rezoning this handful of sites would not be material in terms of land supply. Mr Heath however maintained his opinion that there was no justification for additional LSCZ at Frankton. Ms Evans recognised that rezoning would better provide for existing commercial uses but noted that rezoning would provide additional capacity, albeit small scale.⁶⁵ While rezoning has some appeal given the small land area involved, we consider that ad hoc increases in LSCZ around existing centres does not give due weight to the evidence-based planning approach required by the NPSUDC 2016 and the overall commercial zoning strategy.
248. At the hearing, we asked Mr Heath whether it would be appropriate to enable office activities on the subject sites (not the whole block) while retaining the LDR zoning. In his opinion, this would undermine the zoned provision for office activities. We agree. In our view, the extent of the Business zones together with provision for home occupations in Residential zones provides sufficient capacity and locational opportunities for small offices throughout the urban area. Accordingly, we consider that extending LSC zoning to include 16, 18, 18B and 20 McBride Street is not appropriate.
249. With respect to the risk of intensification of ASANs within the OCB, we agree with My Kyle for QAC that rejecting the rezoning would achieve this purpose for the reasons set out in his evidence.
250. The two traffic engineers more or less agreed in their descriptions of the existing traffic conditions in McBride Street and the surrounding area. They confirmed that traffic calming measures on McBride Street were helpful and that major upgrades recently completed or in the pipeline should reduce congestion in the area. With respect to rezoning to LSCZ, Mr Bartlett did not regard existing traffic and parking issues within the local road network as being a reason to reject the submission whereas Ms Wendy Banks considered McBride Street to still be a residential street and was concerned that the effectiveness of recent improvements was unproven as yet. We agree with Ms Banks that McBride Street is a residential street in an area of LDRZ, the purpose of which is to promote a high amenity low density living environment. It would be ironic if traffic calming measures designed to mitigate the adverse effects of traffic and parking overspill associated with proximity to a shopping centre were used as justification for extending the LSCZ further into the residential area.

⁶³ Report 17-1, Section 3

⁶⁴ T. Heath, Reply Evidence, 6 October 2017, paragraphs 4.1 – 4.3

⁶⁵ R. Evans, Rebuttal Evidence, 7 July 2017, paragraph 6.7

251. Effects on residential amenity were addressed by Mr Geddes insofar as his suggested amendments to Chapter 15 proposed standards for setbacks adjoining Residential zones, front yard setbacks and a maximum height of 8m. However, his evidence did not address the loss of residential character and increased intensity of usage that would result from the establishment of offices or other commercial activities. We agree with Ms Evans that the need to include additional bulk and location standards for these four sites indicated that there are potential adverse effects on residential amenity from the rezoning. We also agree with Ms Evans that the proposed amendments would not mitigate the effect of potential increased intensity of activity on these sites on the wider residential environment.⁶⁶
252. In our view, the most appropriate zone for these properties is LDR because this gives effect to the overall zoning strategy taking into account the lack of any need for additional commercial land supply and their location within the Queenstown Airport OCB. LDRZ also recognises the existing amenity values of this low density suburban environment with pleasant lake views.

49. RECOMMENDATION

253. For the reasons set out above, we recommend that:
- a. Submissions 828 and 840 be rejected; and
 - b. FS1077.2, FS1340.153, FS 1340.59 and FS 1340.69 be accepted; and
 - c. LDR zoning be retained for the submission sites as shown on Planning Map 31a.

⁶⁶ R. Evans, Rebuttal Evidence, 7 July 2017, paragraphs 6.4 and 6.7

PART N: SPENCE FARMS LIMITED AND NEW ZEALAND TRANSPORT AGENCY

Submitter Spence Farms Limited (Submission 698)⁶⁷ and New Zealand Transport Agency (Submission 719)

Further Submissions
None

50. PRELIMINARY MATTERS

50.1. Subject of Submissions

254. This submission related to a property at 1 Hansen Road⁶⁸ and the adjacent Frankton cemetery.

50.2. Outline of Relief Sought

255. The submission sought confirmation of all provisions as notified in Section 15 of the PDP unless otherwise submitted upon and all maps showing the extent of the LSCZ in Frankton. The matters that were 'otherwise submitted upon' were rules pertaining to Building Height, Residential and Visitor Accommodation activities and Acoustic Insulation). Panel Recommendation Report 11 addresses these rules in the context of various submissions on Chapter 15 Local Shopping Centre Zone and recommends their rejection.

256. The site-specific rules applicable to 1 Hansen Road were deferred for consideration by the Panel hearing submissions on Stream 13 Queenstown mapping.⁶⁹ The Panel had been advised that resource consents had been sought for the submission site that could result in a very different land use outcome therefore the notified site-specific LSCZ rules may well be inappropriate due to a change in the factual situation. In addition, the Panel considered that site specific submissions were best heard in parallel with submissions relating to the zoning of the land. For these reasons, the site-specific submission points were transferred to Stream 13.

257. In this report, we address the remaining rules specific to 1 Hansen Road that were transferred from Hearing Stream 8 to Hearing Stream 13:

- a. Policy 15.2.3.5;
- b. Rule 15.4.3.2;
- c. Rule 15.5.1 (in part);
- d. Reply Rule 15.5.4; and
- e. Rule 15.6.2.2 (in part)

258. In addition, the submission requested that the boundary of the Outstanding Natural Landscape as it applied to 1 Hansen Road and the Frankton Cemetery be moved so that it followed the toe of the slope and sat entirely within the proposed Rural Zone. We address this relief below.

⁶⁷ We were advised by Mr Edmonds that the new owner of this site was Staff Accommodation at Frankton Road Limited but have had no formal notification that this company is the successor to this submission under section 2A of the Act.

⁶⁸ Lot 1 DP 26426 and Part Section 5 Block XX1 Shotover Survey District. These lots are separated by an unformed paper road.

⁶⁹ Minute directing that certain submissions be transferred to mapping hearings dated 2 December 2016

259. A general submission point relevant to ‘all provisions’ sought ‘*alternative, amended or such other relief deemed more consistent with or better able to give effect to these submissions or the provisions referred to by these submissions.*’
260. The New Zealand Transport Agency⁷⁰ supported (with amendments in some instances) the provisions for 1 Hansen Road listed in paragraph 285 above except for Rule 15.6.2 re notification. Its key concern was ensuring that additional direct access points to the State Highway were not created and that development is coordinated with NZTA’s plans for reconfiguration of the Hansen Road/SH6 intersection. With respect to Rule 15.6.2, the Agency (as road controlling authority) sought status as an affected party where any application exceeded permitted building coverage.
261. No submissions were received seeking deletion of the specific provisions relating to the development of 1 Hansen Road.

50.3. Description of the Site and Environs

262. The submitter’s property and Frankton Cemetery have frontage to the northern side of SH6 between Terrace Junction shopping centre and Hansen Road. The City Impact Church complex lies to the north-east of the triangular lot that is separated from the main block by an unformed road (Section 5). Land to the east of Hansen Road is in the notified Rural Zone, including the two sites designated for electricity purposes. The Council’s playing fields and sports facility are opposite the submission site, on the southern side of SH6. The area is shown in Figures 6-16 and 6.17.

Figure 6-16 – Aerial photo showing the land subject to this submission outlined in blue

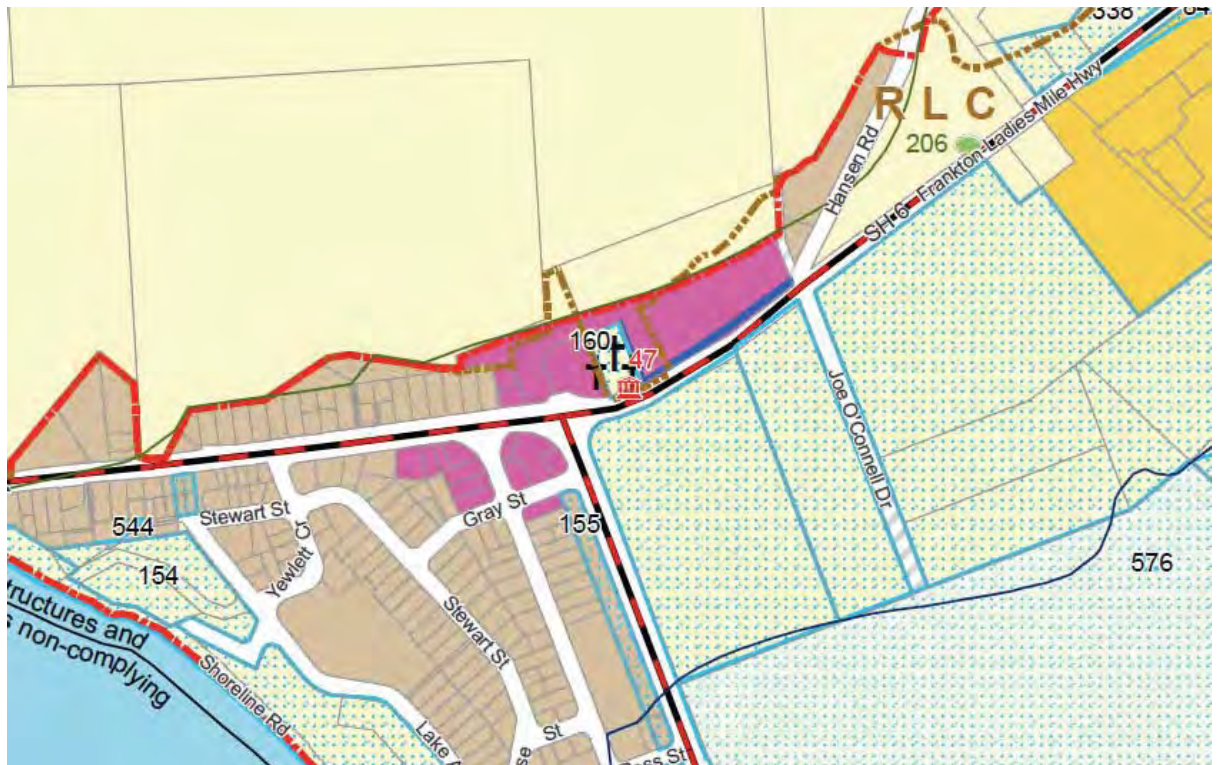

Figure 6-17 – Zoning map showing RZ, LSCZ and LDRZ applicable to 1 Hansen Road and Frankton Cemetery and the location of the notified ONL

50.4. The Case for Moving the ONL boundary

263. The submission stated that the proposed ONL transects 1 Hansen Road in an unusual and illogical manner. The areas identified for urban development under the Operative Plan and the Proposed Plan could not reasonably be considered ONL, nor could the Frankton Cemetery. Support for the provisions applicable to 1 Hansen Road was generally couched.

264. Mr John Edmonds appeared at the hearing to advise the Panel that the property had been purchased by Staff Accommodation at Frankton Road Limited. While he had no instructions from SAFRL and did not give evidence, he discussed zoning and ONL matters with reference to his tabled plans.⁷¹ Mr Edmonds was quite clear that while he was available to assist us, he was not presenting evidence for SAFRL. No landscape, transport or other evidence was presented on behalf of this submitter.

265. We understood from Mr Edmonds that the new owner had obtained resource consent for a 20-lot residential subdivision thus establishing its rights under the ODP, and for a 10-lot subdivision preparatory to making a land use application for residential development.

50.5. The location of the ONL line

266. We deal first with the location of the ONL line. Mr Edmonds described the alignment of the Arrow irrigation water race which traverses the site from east to west, marking a dramatic change from flat to steeply sloping land particularly in the Rural zoned portion of the site. He commented that the ONL 'popped out' into the Rural Zone to the immediate west of the submitter's site without any clear rationale. Mr Edmonds considered the water race to be a logical line for the ONL.⁷²

⁷¹ Exhibit 13.7, 9 August 2017

⁷² J. Edmonds, Hearing recording, 9 August 2017, session 4 commencing after 1 hour 6 minutes

267. For the Council, Dr Read and Ms Evans initially supported the notified alignment of the ONL because it was appropriately located. However, in her Reply evidence, Dr Read acknowledged that the notified ONL boundary in the vicinity of the Spence farm (now SAFRL) was not correctly located because it included the cemetery and followed an incoherent route through the submitter's site.⁷³ Her amended alignment followed the toe of the slope because this was the location of a distinct change in geology, topography and vegetation. Dr Read's revised ONL line was located mainly within the Rural Zone but did include some land in the LSCZ to the north of the cemetery.

50.6. The case for text amendments in Chapter 15

268. With respect to the provisions of Chapter 15, Ms Evans accepted and relied on the evidence of Ms Bowbyes presented in Hearing Stream 8 in relation to Objective 15.2.3, Rule 15.5.1 and Reply Rule 15.5.5 in her Section 42A report.⁷⁴ Her evidence focused on the vires of Rule 15.4.3.2 (development at 1 Hansen Road) and Rule 15.6.2 (notification).

50.7. Rule 15.4.3.2

269. Ms Evans considered there were issues with Rule 15.4.3.2 as drafted because it was framed more like an information requirement. She proposed amendments requiring a comprehensive development plan to be provided with any consent application for a building that address the matters of discretion. Some minor wording changes were also proposed to carry forward what had previously been required by the spatial layout plan.⁷⁵

270. NZTA supported the amended version of Rule 15.4.3.2 in the main but continued to seek an amendment clarifying the relationship with Rule 15.5.5 for the purpose of preventing vehicular access to SH6 from 1 Hansen Road. The Agency originally sought a rule restricting access to SH6 be included in Rule 15.4.3.2. This was rejected by Ms Bowbyes (Stream 8) and Ms Evans on the basis that access is already restricted pursuant to Reply Rule 15.5.5 (development of Hansen Road). For the Agency, Mr Anthony MacColl said that the relationship between these two rules was unclear⁷⁶ therefore he recommended the following addition to Rule 15.4.3.2:

Discretion is restricted to consideration of the following in addition to the matters in Rule 15.4.3.1 above and compliance with the Standards in Rule 15.5:

271. In her rebuttal evidence⁷⁷, Ms Evans said:

I do not agree that reference to the standards is required within the activity rules. The Proposed District Plan (PDP) is made up of activities and standards, that work together to manage development. I note that in the case of Chapter 15, this is clarified by Advice Note 15.3.2.1, which states that "Where an activity does not comply with a Standard listed in the Standards table, the activity status identified in the 'Non-Compliance Status' column shall apply". In this case, an activity that breaches Rule (Standard) 15.5.5 is a discretionary activity. I do not consider that any further clarification, or reference to this standard within Rule 15.4.3.2 is required.

⁷³ Dr M. Read, Reply Evidence, 6 October 2017, paragraph 9.1

⁷⁴ R. Evans, Section 42A Report, 24 May 2017, paragraphs 4.7 and 4.10

⁷⁵ R. Evans, Section 42A Report, 24 May 2017, paragraph 4.12

⁷⁶ A. MacColl, EIC, 9 June 2017, paragraph 42 (see paragraphs 38 – 47 for whole discussion)

⁷⁷ R. Evans, Rebuttal Evidence, 7 July 2017, paragraph 4.2

272. At the hearing, the Agency confirmed that it was satisfied with this position.⁷⁸ We agree with Ms Evans' explanation of the PDP's approach to managing the relationship between standards and activity rules and therefore no change to Rule 15.4.3.2 is required.

50.8. Rule 15.6.2

273. As notified, Rule 15.6.2 provided that building and building coverage matters that are RD activities shall not require the written consent of other persons and shall not be notified or limited notified. NZTA opposed this rule because it considered that it was appropriate for the road controlling authority to assess highway traffic effects when RD activity consent was sought. In the Stream 8 hearing, Ms Bowbyes agreed and proposed an amendment to Rule 15.6.2 excluding applications that exceed permitted building coverage between Hansen Road and Frankton Cemetery from this 'non-notification' clause (see Reply Rule 15.6.2). Ms Evans agreed with this approach in her evidence to hearing Stream 13. In her opinion, the only LSCZ that adjoins a State Highway is 1 Hansen Road, therefore the notification exception does not need to apply more broadly. Ms Evans also noted that the NZTA submission point was only on this particular LSCZ rule (i.e., Rule 15.6.2).⁷⁹

274. Mr MacColl confirmed in his planning evidence for NZTA that the Agency accepted Ms Bowbyes revised version of Rule 15.6.2.2.⁸⁰ The effect of this amendment would be to exclude from non-notification applications that exceeded permitted building coverage between Hansen Road and Frankton Cemetery, with any notification limited to the road controlling authority. However, Mr MacColl did not address the revised version of Rule 15.6.2.1 which related to buildings although the Agency's submission opposed the entire rule.

275. Notwithstanding there was agreement among the planners, we considered that this rule retained a deeming element because it specified the road controlling authority as an affected party. We also considered that the road controlling authority would have an interest in the construction of buildings on this land as provided for in Rule 15.4.3.2. Therefore, in our view, Rule 15.6.2.1 also required amendment. We discuss these matters below.

50.9. Discussion of Planning Framework

276. The land owned by SAFRL was subject to three zonings in the PDP; Rural, LSCZ and LDR (small triangle parcel) whereas the unformed road was not zoned. The part of the frontage of the SAFRL site to Frankton Road to the west of the unformed road is subject to a 6m building line restriction whereas the common boundary with the cemetery is subject to a 4m building restriction. The Queenstown Airport OCB aligns with the boundary between the LSCZ and Rural zones and cuts across the unformed road to align with the northern boundary of the triangle parcel. Frankton Cemetery was zoned Rural, designated as a cemetery reserve (#160) and recognised as an historic heritage feature (#47).

277. The Stage 2 Variations, as notified, proposed zoning the Frankton Cemetery as Community Purpose-Cemetery. The unformed road continues to be identified as 'unformed road' on Planning Map 33.

278. The Strategic Direction identifies the issue of growth pressure impacting on the functioning and sustainability of urban areas, and risks detracting from rural landscapes, particularly its outstanding landscapes. Another issue is that outstanding landscapes have intrinsic qualities and values worthy of protection in their own right, as well as offering significant economic

⁷⁸ Legal submissions, NZTA, 14 July 2017, paragraph 25

⁷⁹ R. Evans, Section 42A Report, 24 May 2017, paragraphs 4.8 – 4.9

⁸⁰ A. MacColl, EIC, 9 June 2017, paragraph 44

value to the District.⁸¹ The objectives and policies address these issues by, among other methods, providing for ONLs to be located with the Rural Zone (with some exceptions) and by using the UGB to delineate the planned extent of urban growth. Accordingly, the UGB, ONL line and Rural Zone boundaries are aligned unless there is good reason to depart from this convention.

279. The LSCZ enables small scale commercial and business activities in discrete pockets of land that are accessible to residential areas and people in transit. The zone seeks to reduce the necessity for people to travel longer distances to town centres to purchase convenience goods and access services. Due to the nature of the Zone's locations in predominantly residential environments, Zone standards limit the potential adverse effects on residential amenity and discourage the establishment of inappropriate activities. Visitor accommodation and residential activities are provided for in the Zone, adding to the vibrancy and viability of the Zone, whilst contributing to the diversity of housing options enabled by the District Plan. One method for ensuring this outcome is to limit the gross floor area of individual retail and office activities (Policy 15.2.1.4 and Rule 15.5.10). Within the OCB, development is required to provide acoustic insulation (Rule 15.5.4).
280. The submission site is located within the OCB. The LSCZ provisions address the management of ASANs seeking to locate within the OCB. As no change to the zoning is requested, the status quo prevails.

51. ISSUES

- a. The most appropriate alignment of the ONL boundary.
- b. The most appropriate textual provisions to ensure the desired outcomes are achieved when 1 Hansen Road is developed.

DISCUSSION OF ISSUES AND CONCLUSIONS

281. First, we note that no submitters sought rezoning of either the SAFRL site or Frankton Cemetery nor was there a request to change the location of the UGB. The changes requested related only to the provisions of Chapter 15 and the ONL boundary. No submitters sought the removal of the site-specific of Chapter 15 that apply to 1 Hansen Road.

51.1. The location of the ONL line

282. Dr Read recommends placing the ONL line at the toe of the slope as shown in Appendix 1 of her Reply Evidence. Her evidence was uncontested however we do not have scope to make the changes she is recommending because her revised ONL line would affect a landowner who is not party to this matter.
283. Ms Evans relied on Dr Read's recommended ONL line in forming her opinion that the submission point be accepted in part. Because there was still a portion of the ONL outside the Rural Zone (ie within the LSCZ), she did not recommend that the submission point be accepted in full.⁸²
284. According to Ms Evans, the particular area of LSCZ to the north of the cemetery was included in the LSCZ to facilitate access between 1 Hansen Road and the LSCZ to the west thereby

⁸¹ Chapter 3, Section 3.1 Issues 2 & 4

⁸² R. Evans, Reply Evidence, 6 October 2017, paragraph 2.2

enabling integrated development of the shopping centre.⁸³ It appears to us that using this land for an internal road and/or commercial development is at odds with its protection as an ONL. However, in forming her opinion in reply, Ms Evans did not evaluate these competing outcomes in the context of the PDP's Strategic Direction (Chapter 3), Urban Development objectives and policies (Chapter 4) and Landscape objectives and policies (Chapter 6).

285. Notified policy 6.3.1.2 provided for classification of the Rural zoned landscapes in the District as ONL, ONF or RLC. With few exceptions, ONLs are not identified within urban zonings in the PDP. This strategic direction was not challenged by submissions on Stage 1 and is not subject to the variation proposed in Stage 2 which amends only the Values (Chapter 6.2) and Rules (Chapter 6.2) for landscapes. Accordingly, the PDP's approach of aligning ONLs/ONFs and Rural zoning was confirmed in Panel Recommendation Report 3 on Outstanding Natural Landscapes and Features.⁸⁴
286. We consider that including an area of LSCZ within the ONL is both contrary to the strategic direction of the PDP and pointless because there are no assessment criteria relating to ONLs in that zone. Indeed, this is an example of the problem that arises when identification of the ONL is conflated with planning goals.
287. In this case, our hands are tied because the LSCZ and the location of the UGB were not challenged therefore planning goals will drive the location of the ONL in the western portion of Lot 1. Pragmatically, we conclude that the ONL, UGB and LSC/Rural zone boundary should be aligned from the western side of Lot 1 to the point where the ONL boundary heads north-east into the Rural Zone. In our view, the notified alignment of the ONL in the Rural zoned portion of Lot 1 section is satisfactory because it follows the Arrow water race, a clear line of demarcation.
- 51.2. Chapter 15 text**
288. By the end of the Stage 1 hearings, the Council and NZTA were generally in agreement on the wording of the provisions in Chapter 15 as they related to 1 Hansen Road. The only issue outstanding was the Panel's concern with the scope of Rule 15.6.2 and the vires of Rule 15.4.3.2 and Rule 15.6.2.2 as revised.
289. In the Stream 8 hearings, there was considerable attention given to the vires of a rule deeming that certain parties are exempt from 'non-notification rules' in the PDP (Rule 12.6). In the Council's legal submissions in reply, Ms Scott confirmed that section 77D of the Act does not allow a local authority to make a rule containing an exemption from non-notification for certain parties.⁸⁵ It is, however, open to a local authority to exempt certain activities. For example, Ms Vicki Jones recommended amending Rule 12.6.1.1 Queenstown Centre Zone so that the exemption would be framed in terms of vehicle access and egress on to a state highway rather than a party.
290. We concur with the Council's legal advice. Therefore, we consider that the revised wording of Rule 15.6.2.2 is problematic because it specifies a party not an activity. The root cause of the problem is the way in which the exceptions for 1 Hansen Road are provided for in Chapter 15. In Rule 15.4.3 Buildings as RD activities, there are two separate categories enabling a distinction to be made in Rule 15.6.2 in terms of notification. In comparison, Rule 15.5.1 Building Coverage makes no distinction between the general standard and the exception

⁸³ Ibid, para 2.3

⁸⁴ Recommendation Report 3; Section 8.5

⁸⁵ Reply Submissions for the Council, Business Zones, paragraphs 3.9 – 3.12

applicable to the land in the LSCZ between Hansen Road and Frankton Cemetery. In our view, Rule 15.5.1 should be divided into two sub-clauses in the same way as Rule 15.4.3. This would enable Rules 15.6.2.1 and 15.6.2.2 to provide for non-notification of applications relating to building and building coverage on all properties except 1 Hansen Road. The effect of these changes is that the Council would carry out a case by case assessment of the need to seek written approval and/or require notification of applications for Buildings and Building Coverage as RD activities at 1 Hansen Road.

291. Our recommended wording for Rule 15.5.1 Building Coverage is:

15.5.1.1 Maximum building coverage – 75%

Non-compliance status **RD**

Discretion is restricted to:

- a. The effects on the quality of the overall streetscape; and
- b. The ability to meet outdoor storage requirements.

15.5.1.2 Except that in the Local Shopping Centre Zone located between Hansen Road and Frankton Cemetery, the maximum building coverage shall be 50%

Non-compliance status **RD**

Discretion is restricted to:

- a. The effects on the quality of the overall streetscape; and
- b. The ability to meet outdoor storage requirements; and
- c. The traffic effects of additional building coverage, including the effects on the State Highway, with particular regard to the intersection between Hansen Road and State Highway 6.

292. Our recommended wording for Rule 15.6.2 is:

“15.6.2.2 Building coverage, except for applications to exceed permitted building coverage between Hansen Road and Frankton Cemetery (Rule 15.5.1.2)”

293. Our concern with Rule 15.4.3.2 is that the provisions relating to Spatial Layout Plans may be *ultra vires*. Given the lack of submissions and evidence on the rule we are not prepared to delete it, rather we recommend the Council reconsider both the *vires* of this rule and its relevance to the actual use of the site.

52. RECOMMENDATION

294. For the reasons set out above, we recommend that:

- a. Submission 698 be accepted in part to the extent that:
 - i. The ONL line be amended by aligning it with the UBG and Rural Zone boundary in the western segment of the northern boundary of 1 Hansen Road as shown on Planning Maps 31, 31a and 33; and
 - ii. LSC zoning be confirmed for the property known as 1 Hansen Road; and
 - iii. Rules 15.5.1 and 15.6.2 be amended as set out above; and
- b. Submission 719 be accepted in part to the extent that the wording of Rules 15.5.1 and 15.6.2 be amended as set out above.
- c. The Council consider whether Rule 15.4.3.2 should remain in the PDP, and if it does, whether the requirements contained within it are lawful.

PART O: MIDDLETON FAMILY TRUST

Submitter **Middleton Family Trust (Submission 338)**

Further Submissions

Remarkables Park Limited (FS1117.45) support,
Hansen Family Partnership (FS1270.75) support,
Oasis In The Basin Association (FS1289.24) oppose,
Queenstown Airport Corporation (FS1340.79) oppose,
Queenstown Park Limited (FS1097.150) support.

53. PRELIMINARY MATTERS

53.1. Subject of Submissions

295. These submissions related to an area of approximately 94.5ha between Lake Johnston and Tucker Beach Rd.

53.2. Outline of Relief Sought

296. Middleton Family Trust (338.2) sought the rezoning of 94.5 ha of land. It sought a combination of 76 ha Low Density Residential and 18 ha Rural Residential. Based on approximate yield calculations, the area of LDRZ could enable 1,156 dwellings and the RR 31 dwellings, over and above the notified Rural Zone. A proposed road access was identified within the submission, extending from Ladies Mile over Ferry Hill passing above and to the east of Lake Johnson to the proposed LDR zone.

297. Associated with the rezoning Submission 338.5 also opposed the ONL location on the submitter's land and requested that it be amended to reflect that approved by Environment Court decision C169/2000; and sought that the UGB line be aligned with the boundaries of the proposed LDRZ.

53.3. Description of the Site and Environs

298. The original submission site is on the northern slopes of land between Ferry Hill and the unnamed hill to the west, and generally to the north of Lake Johnson. It crosses a ridgeline and the northern part of the submission site lies on the slopes and terraces facing Tuckers Beach and the Shotover River valley.

299. The original submission site is shown on Figure 6-18 below.

Figure 6-18 – Original Submission site in blue outline. The ONL is shown as a brown dashed line

- 300. The smaller polygon towards the top of the image is the proposed Rural Residential Zone. The larger polygon is the proposed Low Density Residential Zone.
- 301. A proposed road access was identified within the submission, extending from the Eastern Arterial (Hawthorne Drive) roundabout with SH6 and climbing steeply over Ferry Hill before descending and passing above and to the east of Lake Johnson to the proposed LDR zone. The location of this proposed road is shown on Figure 6-19.

Figure 6-19 – Location of proposed road (blue line)

53.4. Effect of Stage 2 of the PDP.

- 302. Since the submission was lodged and heard in the Stream 13 hearings, the Wakatipu Basin variation has been notified as part of Stage 2 of the variation. Some of this submission site is within the variation. As a result, the submission in respect of that part of the site is deemed to be a submission on the variation⁸⁶ and cannot be heard and decided in Stage 1. The southern boundary of the Wakatipu Basin variation is the ONL line which can be seen on Figure 6-18 above. All of the requested Rural Residential zone and part of the requested LDR zone is

⁸⁶ Pursuant to Clause 16B of the First Schedule to the Resource Management Act 1991

now included in the Wakatipu Basin variation and that part of the submission is deferred to the Stage 2 hearings. Only the part of the submission site outside of the Variation (within the ONL as notified) is considered in the balance of this recommendation.

303. The part of the submission site transferred to Stage 2 is shown in Figure 6-20.

Figure 6-20 – Part of Submission 338 transferred to Stage 2.

54. THE CASE FOR REZONING

54.1. Submitter

304. The case for the submitter largely centred on the perceived importance of substantially increasing the supply of residential land available for development in Queenstown. Evidence for the submitter by Mr Nick Geddes was to the effect that there is a large demand for housing sites and that a great deal of zoned residential land is being withheld by owners. Mr Geddes relied heavily on the NPSUDC 2016 which requires the Council to make available an adequate supply of serviced and available land for urban growth.

305. Mr Geddes acknowledged that adverse environmental effects might occur, particularly to the landscape, but that this could be mitigated to an extent by setting aside sensitive areas such as escarpments, and by planting.

306. Mr Geddes also said that though some natural hazards exist on the site these would be capable of being assessed and managed through the subdivision and consenting process.

307. At paragraph 5.42 of his evidence he stated

I accept that it is important to manage activities towards the protection of the areas single biggest asset the environment. However, I consider primary importance must also be placed on the needs of the community and the higher order provisions in the Act which include the provision of the social and economic wellbeing of a community as well as the preservation of landscapes.

308. Essentially this is an overall judgement approach, relying on section 5 of the RMA to bolster the conclusions he had also reached under the NPSUDC 2016. Mr Geddes found support for his approach in objectives in Chapter 3 of the PDP, particularly Objectives 3.2.6.1 and 3.2.6.2

which directly correlate to the obligations, objectives and policies of the NPSUDC 2016 discussed earlier.

309. Other expert evidence for the submitter was given by Mr Jason Bartlett on transport, and Mr Chris Hansen on servicing and infrastructure. Mr Bartlett said that two access roads would potentially be available to the new residential area, one via the new road over Ferry Hill to the Hawthorne Rd roundabout, and the second via Tucker Beach Rd to SH6. He acknowledged that both would increase traffic through those intersections and that further study would be required to establish whether either of these intersections would have the capacity to handle the additional traffic. He recognised that other development proposals at North Frankton would also be relying on the Hawthorne Drive roundabout and there may not be capacity for both those developments and the current proposal. He described intersection improvements already under consideration by NZTA at the Tucker Beach Rd intersection with SH6.
310. Mr Hansen said that it would be feasible to construct urban services for wastewater, stormwater, water supply, electricity and communications on the site and that the Council's wastewater treatment plant would have capacity to service the site after already-planned upgrades which would provide greater capacity and safety there.

54.2. Oasis in the Basin

311. Oasis in the Basin (Oasis) is a small group of people who are recreational users of the Lake Johnson area and have concerns about the effects of any potential development on the natural values of the area. Evidence for the Association was given by Mr Warwick Goldsmith, a resident of the area, Mr Stephen Skelton, a landscape architect and Mr Andy Carr, a traffic engineer.
312. Mr Goldsmith said that Oasis was not opposing any development that would be outside the ONL. As we have noted earlier, this would be in the northern part of the submission site that has been overtaken by the Wakatipu Basin Variation, and that part of the submission is now deferred to the Stage 2 hearings.
313. Mr Goldsmith said that Lake Johnson is a hidden jewel in the middle of the Wakatipu Basin that is well used by the public for walking, photography, fishing and canoeing, and that it has potential for more use as Queenstown grows and with improvements to access, directions, promotion and management. He said that the enjoyment of the area is heavily dependent on the outstanding natural values of the surrounding area including the submission site. The proposed LDR development would be clearly visible from the vicinity of the site and would severely compromise the quiet enjoyment of its values.
314. Mr Skelton discussed the glacial origins of the lake and the surrounding mountains. He said the lake was virtually invisible except from above, and the openness of the surrounding hills added to the sense of quiet isolation at the lake. He said that although the submission site was in a pastoral farm, the open and relatively unmodified nature of this meant that the land and its glacial formation remained very legible. He described how the site provided a pleasant open foreground to views from the Shotover valley and Wakatipu Basin to the north which helped to frame the views through to the much appreciated Remarkable Mountains to the south. From the south the site is part of a pleasant open and rural edge to the Frankton Flats. He considered the ONL was correctly placed east of Hansen Road where the submitter seeks to have it relocated, as it generally follows the topographic transition between the glacier overridden schist landform and the alluvial fans and terraces bordering the Shotover River. He

considered that the proposed road up the side of Ferry Hill would be an unacceptable intrusion into the ONL there.

315. Overall, he considered that development of the scale proposed would have very high adverse effects on the character and quality of the ONL as it would enable built development to cloak and modify the legible landform, would result in a significant loss of the rural character of the landscape and would impinge on the natural, open character of Lake Johnson. The visual amenity as experienced from public and private places north and northeast of the site would be adversely affected to a moderate to high degree as the rural context and open, natural character of the slopes which hold the Basin would be greatly degraded and the type of development proposed would detract from the distant views of the dramatic mountains.
316. Mr Carr discussed the roading implications of the proposal. He said that the proposed road up Ferry Hill would be steep and high, rising at least 100 metres to the highest point and very expensive to construct. It was his opinion that if the development was to proceed then access should be confined to the Tucker Beach Road end of the site, provided that the proposed improvements to its intersection with SH6 take place. He considered that upgrade would enable the intersection to easily absorb the increased traffic. We note, however, that under the Wakatipu Basin Variation, most of the intervening land is proposed to be zoned Wakatipu Basin Rural Amenity, which is proposed to have a very low density of one household per 80 ha. This may make it uneconomic to build a road across that land to reach what remains of this submission site.
317. Mr Jeffrey Brown, a planning consultant, gave evidence for Oasis. He said that the LDR zoning is proposed on land that is reasonably close to Frankton Corner and to the Frankton Flats zones, and that it could provide for a large number of residential sites which would contribute to the housing needs of the District. This would be a positive effect of the proposal. He accepted that the land may be able to be efficiently accessed and serviced, although there was insufficient information to determine if the traffic and infrastructure effects would be adverse or not.
318. The land is within the ONL. He agreed with Mr Skelton and Dr Read for the Council that the LDR zoning in this location, and the access road to it, would have very high or significant adverse effects on the landscape values of the ONL, and on the rural amenity values of Lake Johnson and its environs. He agreed with Mr Goldsmith that the zoning would also urbanise an existing undeveloped area and would foreclose the opportunity for Lake Johnson, its margins and its wider naturalness to be an undeveloped and remote “getaway” close to the urban settlement areas of Queenstown and Frankton. Overall, the very high (or significantly) adverse effects of the LDR zoning on the landscape values of the area outweighed any positive effects of the zoning, in his view.
319. He analysed the higher order strategic objectives and policies in Chapter 3 of the PDP, particularly those relating to urban growth and landscape protection and concluded that that the LDR zone would not fulfil the PDP’s Strategic Direction goals of “strategic and integrated management of urban growth” or “distinctive landscapes are protected from inappropriate development”.
- 54.3. Council**
320. The evidence for the Council was given by Dr Marion Read on landscape, Ms Wendy Banks on transport, Mr Ulrich Glasner on infrastructure, Mr Glen Davis on ecology and Ms Kimberley Banks on planning.

321. Mr Glasner was not able to support the zoning in the absence of detailed modelling to demonstrate the feasibility of providing services.
322. Mr Davis did not oppose the proposal in the absence of any significant indigenous vegetation communities on the site.
323. Ms Wendy Banks opposed the submission based on the size of the area sought for residential zoning. She identified that the anticipated vehicle trips generated by the proposed rezoning would account for 69% of the total existing trips on the Hawthorne Drive roundabout. We note that the reduced size of the site we are now dealing with would reduce that proportion, but it would obviously remain a very relevant issue especially given the likelihood of other developments at North Frankton also having to rely on that roundabout.
324. Dr Read opposed this submission in part. Dr Read opposed the proposed LDRZ, but was however not opposed to the areas of RR zoning. Given that we are considering only part of the proposed LDRZ and not the northern area which contains the balance of the LDRZ and all of the proposed RR, we take that to mean that Dr Read opposed the remaining part of the submission in full.
325. Dr Read identified the location as being within the backdrop to highly valued views within the Wakatipu Basin, including those seen from Littles and Domain Roads. It was her opinion that the LDRZ would have significant adverse effects on the character and quality of the landscape. Additionally, she considered the proposed access road crossing the upper terraces of Ferry Hill and around Lake Johnson to also have significant effects on the ONL as seen from both the Wakatipu Basin and from within Frankton.
326. In her planning report, Ms Kimberley Banks acknowledged that the proposal would on face value have some merit in terms of connectivity and proximity to services, amenities and existing residential areas. However, in her opinion the provision of housing capacity was not the sole consideration in the application of zoning, and in this instance she considered that Goal 3.2.5 of the PDP "*the protection of our distinctive landscapes from inappropriate development*" in combination with Goal 3.2.4 to be of greater comparative significance. She did not accept a pressing need to realise this scale of capacity, where realising this is likely to come only with significant costs to the landscape. She believed that such an intensity of development in this location to be inappropriate and therefore she recommended that we reject the areas of proposed LDRZ.
327. Ms Rosie Hill, legal counsel for Oasis also discussed the latter point extensively in legal submissions. She said that the NPSUDC 2016 has to be read in conjunction with Part 2 of the RMA. The NPSUDC 2016 does not address the values in section 6 of the RMA at all. In this case the relevant subsection is s6(b), the protection of outstanding natural landscapes from inappropriate development. The Council is required to give effect to the NPSUDC 2016 but also to Part 2. In her view, the submitter had not provided sufficient evidence of a compelling need to rezone this land despite the existence of the ONL. She referred to the evidence of Mr Phil Osborne for the Council on dwelling capacity, which was to the effect that there was sufficient zoned and available residential land to satisfy the requirements of the NPSUDC 2016. She submitted we should prefer Mr Osborne's evidence to that of Mr Geddes, because of its greater rigour and Mr Osborne's better qualifications to carry out such research. She pointed out that the Council is completing a detailed assessment of development capacity as required by the NPSUDC 20016 and is due to report on this by December 2018. Consequently she said

that the submitter had not made out a case that in this instance the needs for further residential land in Queenstown should overcome the requirements of Part 2 of the RMA and the relevant landscape identification and protection objectives in Chapter 3 of the PDP.

54.4. Discussion of Planning Framework

328. Recommended Objective 3.2.2 is that *Urban growth is managed in a strategic and integrated manner*. Under this, Objective 3.2.2.1 requires that *Urban development occurs in a logical manner so as to:*

- *promote a compact, well designed and integrated urban form;*
- *build on historical urban settlement patterns;*
- *achieve a built environment that provides desirable, healthy and safe places to live, work and play;*
- *minimise the natural hazard risk, taking into account the predicted effects of climate change;*
- *protect the District's rural landscapes from sporadic and sprawling development; and*
- *ensure a mix of housing opportunities including access to housing that is more affordable for residents to live in;*
- *contain a high quality network of open spaces and community facilities; and.*
- *be integrated with existing, and planned future, infrastructure.*

329. Objective 3.2.5 is: *The retention of the District's distinctive landscapes*. Objective 3.2.5.1 is: *The landscape and visual amenity values and the natural character of Outstanding Natural Landscapes and Outstanding Natural Features are protected from adverse effects of subdivision, use and development that are more than minor and/or not temporary in duration.*

54.5. The Operative and Proposed Otago Regional Policy Statements

330. The Operative Otago Regional Policy Statement must be given effect to⁸⁷. This states

5.4.3 To protect Otago's outstanding natural features and landscapes from inappropriate subdivision, use and development.

331. The related policies identify the characteristics of ONFs and landscapes, but do not identify what is inappropriate. Effectively this restates s6(b) of the RMA, but it remains necessary to determine what is inappropriate, and there is no mandatory guidance here as to what the outcome of the case should be.

332. The Proposed Regional Policy Statement takes a very similar approach. Objective 2.2 and its related policies are;

Objective 2.2

Otago's significant and highly-valued natural resources are identified, and protected or enhanced

Policy 2.2.4

Managing outstanding natural features, landscapes, and seascapes Protect, enhance and restore the values of outstanding natural features, landscapes and seascapes, by:

⁸⁷ Section 75(3)(c) of the RMA

- a. *Avoiding adverse effects on those values which contribute to the significance of the natural feature, landscape or seascape; and*
- b. *Avoiding, remedying or mitigating other adverse effects on other values; and*
- c. *Assessing the significance of adverse effects on values, as detailed in Schedule 3; and*
- d. ...
- e. ...
- f. *Encouraging enhancement of those areas and values.*

333. Schedule 3 contains a set of criteria for assessing the significance of adverse effects.

334. As the proposed RPS is not yet operative, and is subject to appeal, we do not consider it should be given significant weight. In any case, it contains no specific direction that would determine this case. It will still be necessary to consider whether the proposed development would be appropriate in the ONL. At most, the Schedule 3 criteria might assist in that consideration.

55. ISSUES

- a. Landscape
- b. Transport
- c. Dwelling Capacity

56. DISCUSSION OF ISSUES AND CONCLUSIONS

335. As we have already noted the NPSUDC 2016 requires the Council to monitor the availability of land for development and ensure a sufficient amount of land is zoned, serviced and available. We have discussed the NPSUDC 2016 extensively in our introduction to this report.⁸⁸ We concluded in that report that Queenstown has sufficient land available for development for the present. The Council is still carrying out its investigation and reporting required under the NPSUDC 2016. Even if the outcome of the Council's investigation is a conclusion that more land needs to be found, the Council would still need to consider where the most appropriate sites would be, which might or might not include this one. Therefore we do not think it necessary to take any precipitate action on this submission simply to satisfy the perceived shortfall.

336. With regard to landscape, the submitter did not provide any expert evidence on this. The evidence of both Dr Read for the Council and Mr Skelton for Oasis was clear and convincing. Both concluded that there would be significant adverse effects on the ONL from this proposal. We accept and adopt their conclusions.

337. With regard to roading capacity, even Mr Bartlett for the submitter considered that further investigation would be required into the capacity effect at the Hawthorne Drive roundabout before this proposal could go ahead. Ms Wendy Banks for the Council agreed with that. Mr Carr for Oasis in the Basin was more concerned about the difficult alignment of this road, and considered that alternative access to the site should be restricted to via Tucker Beach Rd. Because of the situation with the Wakatipu Basin variation we cannot rely on that alternative at this stage. Therefore the proposal is premature on the roading issue alone.

338. In these circumstances we do not need to discuss servicing or any other issues.

⁸⁸ Report 17-1, Section 3

57. RECOMMENDATION

339. For the reasons set out above, we recommend that:
- a. Submissions 338.2 and 338.5 be rejected; and
 - b. FS1117.45, FS1270.75 and FS1097.150 be rejected; and
 - c. FS1289.24 and FS1340.79 be accepted

PART P: KEITH HINDLE AND DAYLE WRIGHT

Submitter Keith Hindle and Dayle Wright (Submission 476)

Further Submission

None

58. PRELIMINARY MATTERS

58.1. Subject of Submissions

340. These submissions originally related to an area of approximately 3.03 ha being part of 111 Tucker Beach Rd. The majority of the site has been included in the Wakatipu basin Variation and that part of the current submission is deemed to be a submission on that variation. A small residue of the site containing 0.56ha is outside the Wakatipu Variation and remains to be dealt with in Stage 1.

58.2. Outline of Relief Sought

341. The submitter requested that this land be re-zoned to Rural Residential Zone with a minimum lot size of 3000m²; and that proposed Planning Map 31 – Lower Shotover be amended to identify the specific area identified within Attachment 1: Proposed Rural Residential Zone Location Map.

58.3. Description of the Site and Environs

342. The site is in Tucker Beach Rd to the north of the ODP Quail Rise Zone, as shown on Figure 6-21.

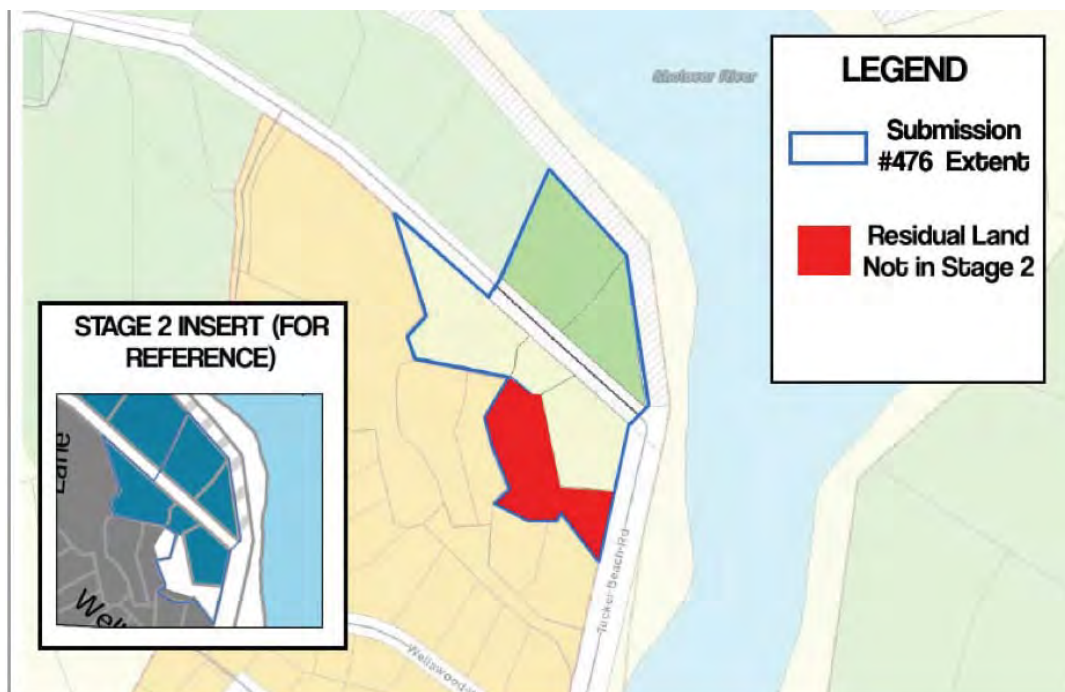

Figure 6-21 – Submission site remaining in Stage 1

58.4. The Case for Rezoning

343. The submission stated that the land would make an appropriate and logical transition between the Quail Rise Zone and the Rural Zone in terms of a gradual reduction in density, that the site

could be developed to a density of one site per 3000m² with no more than minor adverse effects and that there was no need for discretionary activity assessment. No further information or evidence was received from the submitter.

344. For the Council, there was no evidence in opposition in respect of landscape, ecology, traffic or infrastructure.

345. In his planning report, Mr Buxton considered retention of the Rural Zoning would be preferable because it would enable more robust analysis of the landscape implications of any subdivision applications.

58.5. Discussion of Planning Framework

346. The site is in the Rural Character Landscape. Strategic Objectives and Policies in Chapters 3 and 6 seek to maintain or enhance the rural character and visual amenity values by directing new development into areas that can absorb it without material detracting and to identify those areas that cannot absorb change.⁸⁹

347. If the site remains zoned Rural then applications for further subdivision and development would be discretionary and subject to landscape assessment criteria. Under the Rural Residential zoning, subdivision would be restricted discretionary and subject to a range of objectives, policies and rules designed to maintain and enhance landscape character and amenity and manage visual prominence including by controlling colour, scale, location and height⁹⁰. Similar provisions exist in Chapter 27 to manage effects at the time subdivisions are approved.

59. ISSUES

348. Landscape

349. Appropriate zoning for the site

60. DISCUSSION OF ISSUES AND CONCLUSIONS

350. With regard to landscape we note that this area has not been identified as an area that is not able to absorb change, and that Dr Read considered the area would be able to absorb change under Rural Residential Zone provisions without more than minor adverse effects.

351. Since the time of writing the Section 42A Reports, the zoning of land in the immediate vicinity to the north has been proposed to be changed from Rural Lifestyle, with an average density of one lot per 2ha, to Wakatipu Basin Lifestyle Precinct⁹¹ with an average density of one lot per 1 hectare. We cannot assume that this variation will be approved. However we do note that land in that part of the zone is already subdivided to a density greater than provided for by the Variation. The sites range in size from 3794m² to 7491m² according to Mr Buxton's report.⁹² Rural Residential development on the remaining portion of the submission land to a similar density might result in a very small number of additional allotments. Given the landscape evidence supports this we consider it would be appropriate. However, we have no evidence at all to support the requested change in minimum lot size from 4000m² to 3000m², or the

⁸⁹ Objective 3.2.5.2 and Policies 3.3.23, 6.3.18 and 6.3.19

⁹⁰ Objective 22.2.1, policies 22.2.1.1, 22.2.1.5, Rules 22.5.1-22.5.11

⁹¹ Stage 2 Variations

⁹² R Buxton, Section 42A report, paragraph 15.11

requested change in status to controlled activity. Proposals to subdivide to a smaller lot size can be made and considered through the resource consent process.

61. RECOMMENDATION

352. For the reasons set out above, we recommend that Submission 476 be accepted in part by rezoning the land not affected by Stage 2 as Rural Residential.

PART Q: SUMMARY OF RECOMMENDATIONS

354. For the reasons set out above, we recommend that:
- a. Submission 455 and Further Submissions 1270 and 1340 be accepted, and Further Submission 1092 be rejected in part (refer Part B);
 - b. Submission 8 be rejected, and Submissions 140, 177, 391, 399, 408, 717, 751 and 847 and Further Submissions 1270, 1029, 1061, 1062, 1195, 1271, 1340, 1092, 1077 and 1189 be accepted in part (refer Part C);
 - c. Submission 501 and Further Submissions 1102, 1189, 1195, 1270 and 1289 be accepted in part (refer Part D);
 - d. Submission 488 be rejected and Further Submission 1340 be accepted (refer Part E);
 - e. Submissions 344 and 720 be rejected, and Further Submission 1077 be accepted (refer Part F);
 - f. Submission 418 and Further Submissions 1117 and 1340 be rejected (refer Part G);
 - g. Submission 140 be accepted (refer Part H);
 - h. Submissions 586 and 775 be rejected (refer Part I);
 - i. Submission 238 be rejected, and Submissions 24, 35, 36, 43, 55 and 85 and Further Submissions 1107, 1226, 1234, 1241, 1242, 1248, 1249 and 1340 be accepted (refer Part J);
 - j. Submission 128 be rejected and Further Submissions 1077 and 1340 be accepted (refer Part K);
 - k. Submission 141 be rejected and Submission 1340 be accepted in part (refer Part L);
 - l. Submissions 828 and 840 be rejected, and Further Submissions 1077 and 1340 be accepted (refer Part M);
 - m. Submissions 698 and 719 be accepted in part (refer Part N);
 - n. Submission 338 and Further Submissions 1117, 1270 and 1097 be rejected, and Further Submissions 1289 and 1340 be accepted (refer Part O);
 - o. Submission 476 be accepted in part (refer Part P).
355. As a consequence of those recommendations, we recommend that:
- a. the Frankton North area be zoned as shown on the map in Appendix 2, and the Landscape Classification line follow the UGB as shown in Appendix 2; and
 - b. The portion of 111 Tucker Beach Road not subject to Stage 2 be zoned Rural Residential.
356. We recommend that the amendments to Chapters 8, 15, 16 and 27 as shown in Appendix 1 be adopted to give effect to the above recommendations.
357. We further recommend that:
- a. The Council consider whether Rule 15.4.3.2 should remain in the PDP, and if it should, whether the requirements contained in the rule are lawful; and
 - b. The Council reconsider the zoning of properties in and around Glenda Drive zoned Rural in the PDP when it reviews the industrial zones.

For the Hearing Panel

Denis Nugent (Chair)

Dated: 4 April 2018

Appendix 1

Recommended Amendments to Chapters 8, 15, 16 and 27

Provisions to be confirmed or inserted in Chapter 8:

- 8.2.8 Objective** - The development of land fronting State Highway 6 (between Hansen Road and Ferry Hill Drive) provides a high quality residential environment which is sensitive to its location at the entrance to Queenstown, minimises traffic impacts to the State Highway network, and is appropriately serviced.

Policies

- 8.2.8.1 Encourage a low impact stormwater design that utilises on-site treatment and storage/dispersal approaches.
- 8.2.8.2 Avoid the impacts of stormwater discharges on the State Highway network.
- 8.2.8.3 Provide a planting buffer along the State Highway frontage to soften the view of buildings from the State Highway network.
- 8.2.8.4 Provide for a safe and legible transport connections that avoid any new access to the State Highway, and integrates with the road network and public transport routes on the southern side of State Highway 6.

Note: Attention is drawn to the need to consult with the New Zealand Transport Agency (NZTA) prior to determining an internal and external road network design under this policy.

Note: Attention is drawn to the need to obtain a Section 93 notice from the NZ Transport Agency for all subdivisions on State Highways which are declared Limited Access Roads. The NZ Transport Agency should be consulted and a request made for a notice under Section 93 of the Government Roading Powers Act 1989.

- 8.2.8.5 Require that the design of any road or vehicular access within individual properties is of a form and standard that accounts for long term traffic demands for the area between Hansen Road and Ferry Hill Drive, and does not require the need for subsequent retrofitting or upgrade.
- 8.2.8.6 Require the provision of a safe and legible walking and cycle environment links to the other internal and external pedestrian and cycle networks and destinations on the southern side of State Highway 6 along the safest, most direct and convenient routes.
- 8.2.8.7 Require the provision of an internal road network that ensures road frontages are not dominated by vehicular access and parking.
- 8.2.8.8 Ensure coordinated, efficient and well-designed development by requiring, prior to, or as part of subdivision and development, construction of the following to appropriate Council standards:

- a. A 'fourth leg' off the Hawthorne Drive/State Highway 6 roundabout;
- b. All sites created in the area to have legal access to either Hansen Road or the Hawthorne Drive/State Highway 6 roundabout; and
- c. New and safe pedestrian connections between Hansen Rd and the southern side of SH6, and the Hawthorne Drive/State Highway 6 roundabout, Ferry Hill Drive and the southern side of State Highway 6.

8.2.8.9 Encourage the creation of a legal internal road between Hansen Rd and Ferry Hill Drive.

8.5.3	<p>Development on land north of State Highway 6 between Hansen Road and Ferry Hill Drive shall provide the following:</p> <p>8.5.3.1 Transport, parking and access design that:</p> <ul style="list-style-type: none"> a. Ensures connections to the State Highway network are only via Hansen Road, the Hawthorne Drive/State Highway 6 Roundabout, and/or Ferry Hill Drive b. There is no new vehicular access to the State Highway Network. <p>8.5.3.2 Where a site adjoins State Highway 6, landscaping planting buffer fronting State Highway 6 as follows:</p> <p>A density of two plants per square metre located within 4m of the State Highway 6 road boundary selected from the following species:</p> <ul style="list-style-type: none"> i. Ribbonwood (<i>Plagianthus regius</i>) ii. <i>Corokia cotoneaster</i> iii. <i>Pittosporum tenuifolium</i> iv. <i>Grisilinea</i> v. <i>Coprosma propinqua</i> vi. <i>Olearia dartonii</i> <p>Once planted these plants are to be maintained in perpetuity.</p>	NC
--------------	---	----

Provisions to be included in Chapter 15:

- 15.5.1.1** Maximum building coverage – 75%
 Non-compliance status **RD**
 Discretion is restricted to:
- a. The effects on the quality of the overall streetscape; and
 - b. The ability to meet outdoor storage requirements.

15.5.1.2 Except that in the Local Shopping Centre Zone located between Hansen Road and Frankton Cemetery, the maximum building coverage shall be 50%

Non-compliance status **RD**

Discretion is restricted to:

- d. The effects on the quality of the overall streetscape; and
- e. The ability to meet outdoor storage requirements; and
- f. The traffic effects of additional building coverage, including the effects on the State Highway, with particular regard to the intersection between Hansen Road and State Highway 6.

Rule 15.6.2 is:

"15.6.2.2 Building coverage, except for applications to exceed permitted building coverage between Hansen Road and Frankton Cemetery.

Provisions to be included in Chapter 16:

16.2.3 Objective - The development of land north of State Highway 6 (between Hansen Road and Ferry Hill Drive) provides a high quality environment which is sensitive to its location at the entrance to Queenstown, minimises traffic impacts to the State Highway network, and is appropriately serviced.

Policies

16.2.3.1 Encourage a low impact stormwater design that utilises on-site treatment and storage / dispersal approaches.

16.2.3.2 Avoid the impacts of stormwater discharges on the State Highway network.

16.2.3.3 Provide a planting buffer along the State Highway frontage to soften the view of buildings from the State Highway network.

16.2.3.4 Provide for safe and legible transport connections that avoid any new access to the State Highway, and integrates with the road network and public transport routes on the southern side of State Highway 6.

Note: Attention is drawn to the need to consult with the New Zealand Transport Agency (NZTA) prior to determining an internal and external road network design under this policy.

Note: Attention is drawn to the need to obtain a Section 93 notice from the NZ Transport Agency for all subdivisions on State Highways which are declared Limited Access Roads. The NZ Transport Agency should be consulted and a request made for a notice under Section 93 of the Government Roadway Powers Act 1989.

16.2.3.5 Require that the design of any road or vehicular access within individual properties is of a form and standard that accounts for long term traffic demands for the area between

Hansen Road and Ferry Hill Drive, and does not require the need for subsequent retrofitting or upgrade.

16.2.3.6 Provide a safe and legible walking and cycle environment that links to the other internal and external pedestrian and cycle networks and destinations on the southern side of State Highway 6 along the safest, most direct and convenient routes.

Note: Attention is drawn to the need to consult with the New Zealand Transport Agency (NZTA) to determine compliance with this policy.

16.2.3.7 Require the provision of an internal road network that ensures road frontages are not dominated by vehicular access and parking.

16.2.3.8 Ensure coordinated, efficient and well-designed development by requiring, prior to, or as part of subdivision and development, construction of the following to appropriate Council standards:

- a. A 'fourth leg' off the Hawthorne Drive/SH6 roundabout;
- b. All sites created in the area to have legal access to either Hansen Road or the Hawthorne Drive/SH6 roundabout; and
- c. New and safe pedestrian connections between the Hawthorne Drive/SH6 roundabout, Ferry Hill Drive and the southern side of SH6.

16.2.3.9 Encourage the creation of a legal internal road between Hansen Rd and Ferry Hill Drive

16.4.7	<p>Warehousing, Storage & Lock-up Facilities (including vehicle storage) and Trade Suppliers except as provided for by Rule 16.4.18</p> <p>Discretion is restricted to:</p> <ul style="list-style-type: none"> a. The impact of buildings on the streetscape and neighbouring properties in terms of dominance impacts from large, utilitarian buildings; b. The provision, location and screening of access, parking and traffic generation; and c. Landscaping. 	RD
16.4.17	<p>Activities Sensitive to Aircraft Noise within the Queenstown Airport Outer Control Boundary</p>	PR
16.4.18	<p>Warehousing, Storage & Lock-up Facilities (including vehicle storage) and Trade Suppliers in the zone at Frankton North</p>	PR

<p>16.5.11</p>	<p>Development on land north of State Highway 6 between Hansen Road and Ferry Hill Drive shall provide the following:</p> <p>16.5.13.1 Transport, parking and access design that:</p> <ul style="list-style-type: none"> a. Ensures connections to the State Highway network are only via Hansen Road, the Hawthorne Drive/SH6 Roundabout, and/or Ferry Hill Drive b. There is no new vehicular access to the State Highway Network. <p>16.5.13.2 Where a site adjoins State Highway 6, landscaping provides a planting buffer fronting State Highway 6 as follows:</p> <p>A density of two plants per square metre located within 4m of the State Highway 6 road boundary selected from the following species:</p> <ul style="list-style-type: none"> i. Ribbonwood (<i>Plagianthus regius</i>) ii. <i>Corokia cotoneaster</i> iii. <i>Pittosporum tenuifolium</i> iv. <i>Grisilinea</i> v. <i>Coprosma propinqua</i> vi. <i>Olearia dartonii</i> <p>Once planted these plants are to be maintained in perpetuity.</p>	<p>NC</p>
-----------------------	--	-----------

Provisions to be included in Chapter 27:

Frankton North

27.3.12 Objective - Subdivision of the of the Medium Density Residential and Business Mixed Use Zones on the north side of State Highway 6 between Hansen Road and Quail Rise enables development integrated into the adjacent urban areas while minimising traffic impacts on the State Highway.

Policies

- 27.3.12.1 Limit the roading access to Frankton North to Hansen Road, Ferry Hill Drive or the Hawthorne Drive/SH6 roundabout.
- 27.3.12.2 Ensure subdivision and development enables access to the roading network from all sites in the Frankton North Medium Density Residential and Business Mixed Use Zones and is of a form that accounts for long-term traffic demands without the need for subsequent retrofitting or upgrade.

- 27.3.12.3 Ensure subdivision and development in the Frankton North Medium Density Residential and Business Mixed Use Zones provides, or has access to, a safe and legible walking and cycling environment adjacent to and across the State Highway linking to other pedestrian and cycling networks.

27.7.9	Frankton North	
27.7.9.1	<p>All subdivision activity in the Business Mixed Use Zone and Medium Density Residential Zone located north of State Highway 6 between Hansen Road and Ferry Hill Drive that complies with the following standards in addition to the requirements of Rule 27.5.7:</p> <ul style="list-style-type: none"> a. Access to the wider roading network shall only be via one or more of: <ul style="list-style-type: none"> i. Hansen Road; ii. Ferry Hill Drive; and/or iii. Hawthorne Drive/State Highway 6 roundabout. b. No subdivision shall be designed so as to preclude an adjacent site complying with clause a. <p>Discretion is restricted to:</p> <ul style="list-style-type: none"> a. Safe and effective functioning of the State Highway network; b. Integration with other access points through the zones to link up to Hansen Road, Ferry Hill Drive or the Hawthorne Drive/State Highway 6 roundabout; c. Integration with pedestrian and cycling networks, including those across the State Highway. 	RD
27.7.9.2	Any subdivision activity in the Business Mixed Use Zone and Medium Density Residential Zone located north of State Highway 6 between Hansen Road and Ferry Hill Drive that does not comply with Rule 27.7.9.1.	NC
